

Olympiad Test Paper — Sanskrit (Class 7) — Paper 5

Chapter 9: अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani)

Paper 5 — (progressively harder)

Subject	Sanskrit (NCERT Class 7, Deepakam)
Chapter	9 — अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani)
Total Questions	60 (Multiple Choice, single correct)
Maximum Marks	240
Suggested Time	90 minutes

Marking scheme: +4 for each correct answer · -1 for each wrong answer · 0 if unattempted.

Instructions: Each question has four options (A), (B), (C), (D); exactly one is correct. P5 traps: the यज्ञ-चक्र is read by ablatives (कर्म→यज्ञ→पर्जन्य→अन्न→भूतानि) so any reversed arrow makes a product into a source; अन्नात् is अपादान-पञ्चमी ('source it arises from'), never the agent (instrumental) nor purpose (dative अन्नाय); अन्नाद् in अन्नाद्भवन्ति is that same त्→द् voiced ablative (case unchanged); भवन्ति/सम्भवः/समुद्भवः all carry √भू ('become'), so the chain is coming-into-being not manufacture; जानीयात् is विधिलिङ् (the -ईय- optative 'should know') of √ज्ञा, ≠ present जानाति, future ज्ञास्यति, imperative जानीहि; ज्ञेयः is the -य gerundive ('to be known', like कार्य), ≠ ज्ञात (past participle) ≠ ज्ञाता (agent); ब्रह्म (नपुंसक, सर्वव्याप्तः, impersonal) ≠ ब्रह्मा (masc. creator) ≠ ब्रह्मन् (priest); ओषधीनाम् is genitive plural of the ई/इ-feminine ओषधि; रसायन is the Ayurvedic word re-coined for chemistry; उत्पत्तिक्रमम् ('order of arising') is the कर्म of जानीयात्. Do not write on this paper — mark answers on your answer sheet.

1. Gita 3.14 names exactly four ablative sources (अन्नात्, पर्जन्यात्, यज्ञात्, कर्म-) and four products. A pupil counts भूतानि among the 'sources'. The decisive reason भूतानि is NOT a source-link in the wheel is that:

- (A) भूतानि is plural, and only singular words can be ablative sources
- (B) भूतानि is the source of कर्म, since beings perform action, so it is a source after all
- (C) भूतानि is neuter, and neuter nouns cannot stand in any case but the nominative
- (D) no link in the verse arises FROM भूतानि — beings are only the final product (अन्नाद् भवन्ति भूतानि), nothing is said to come from them

2. Treating the four statements of Gita 3.14 as a single closed loop, the ONE link that is simultaneously a product of yajna AND (via food) an upstream cause of beings is:

- (A) पर्जन्य (rain) — it arises from यज्ञ and then, through अन्न, leads on to भूतानि
- (B) कर्म (action) — it is the product of यज्ञ and the cause of rain
- (C) यज्ञ (sacrifice) — it is the product of पर्जन्य and the cause of कर्म
- (D) भूतानि (beings) — they are the product of कर्म and the cause of अन्न

3. If one wished to extend Gita 3.14 into a self-renewing wheel (so it never simply ends at भूतानि), the link that the chapter's framing supplies to close कर्म back onto the cycle is that:

- (A) अन्न (food) directly produces कर्म, so food loops straight back to action
- (B) भूतानि (the beings) are themselves the ones who perform कर्म, so the living beings produced at the tail feed action back at the head
- (C) पर्जन्य (rain) is what generates कर्म, closing the loop through the sky
- (D) ब्रह्म replaces कर्म at the head, so no closure is needed

4. A farmer hoards grain, performs no यज्ञ (selfless contribution), yet expects rain as usual. Tracing the verse FORWARD from his missing यज्ञ, the chapter's logic predicts the first link to fail is:

- (A) पर्जन्य (rain), the link यज्ञ directly sustains, after which food and then beings suffer in turn
- (B) अन्न (food), because hoarded grain rots first
- (C) भूतानि (beings), because the verse names them first
- (D) कर्म (action), because hoarding is itself a faulty action

5. Two students draw the wheel. One draws कर्म→यज्ञ→पर्जन्य→अन्न→भूतानि; the other reverses every arrow and claims 'a wheel reads both ways.' The grammatically decisive objection is:

- (A) both are right, since the verse lists the links in no fixed order
- (B) each ablative fixes the arrow from source to product, so reversing them wrongly makes beings the source of food, yajna the source of action, etc. — contradicting the verse's cases
- (C) only the reversed wheel is right, because the verse names भूतानि before कर्म
- (D) neither is right, because Gita 3.14 describes destruction, not arising

6. Modern ecology says decomposers return dead matter to the soil that then grows plants. Asked whether this 'extra loop' refutes Gita 3.14, the chapter's stance is that it:

- (A) refutes the verse, because the Gita names yajna while ecology names decomposers
- (B) is irrelevant, because grammar and science can never describe the same reality
- (C) proves the Gita is literally a biology textbook in disguise
- (D) harmonises with the verse — both portray one interdependent cycle in which no link stands alone, merely described from grammar-and-philosophy versus from biology

7. अन्नात् फलं भवति वृक्षात् ('fruit comes from the tree') and ग्रामात् आगच्छति ('he comes from the village') share one कारक role with the अन्नात् of the verse. That shared role, in technical terms, is:

- (A) करण — the instrument by which the action is done, expressed by the instrumental
- (B) सम्प्रदान — the recipient for whom the action is done, expressed by the dative
- (C) अधिकरण — the locus in which the action happens, expressed by the locative
- (D) अपादान — the fixed point of separation/origin, expressed by the ablative (पञ्चमी)

8. A pupil renders the verse as 'beings are made BY food (food being the doer)' and writes अन्नेन. Two things are wrong: the case AND the relationship. The correct correction is:

- (A) अन्नेन (instrumental) would mark food as the agent/means; the verse has the ablative अन्नात्, marking food as the SOURCE beings arise from, not an agent that makes them
- (B) अन्नेन is right, and the verse really does treat food as the active maker of beings
- (C) the case should be the dative अन्नाय, since beings exist for the benefit of food
- (D) the case should be the genitive अन्नस्य, since beings belong to food as its property

9. On the exact model of अन्नाद् भवन्ति भूतानि (source in the ablative, product as a plural-agreeing nominative subject), 'from the seeds, sprouts come to be' is correctly:

- (A) बीजानि भवन्ति अङ्कुराः
- (B) बीजेषु भवन्ति अङ्कुराः
- (C) बीजेभ्यः भवन्ति अङ्कुराः
- (D) बीजाय भवन्ति अङ्कुराः

10. Why does Sanskrit attach the ablative to अन्न (the source) rather than to भूतानि (the product), when one might think the more important thing should carry the special case?

- (A) because the ablative always attaches to the shorter of the two words, and अन्न is shorter than भूतानि
- (B) case is assigned by कारक role, not importance: अपादान is by definition the point arising proceeds FROM, which is food, so food takes the ablative while the product is simply the nominative subject
- (C) because the product is more important, so it earns the nominative by being the real source
- (D) because Sanskrit attaches the ablative to whichever word the poet mentions last

11. A debater says 'अन्नात् could be ablative OR dative, since both can sometimes follow a verb of becoming.' The single test that settles it as ablative here is that:

- (A) the -आत् ending is the अकारान्त ablative singular, while the dative would be अन्नाय; the form itself, not just the meaning, fixes it as ablative
- (B) both forms are spelled अन्नात्, so only the meaning can decide, and meaning is ambiguous
- (C) the dative and ablative are identical for अन्न, so the question cannot be answered
- (D) verbs of becoming always take the dative, so अन्नात् must be dative

12. In अन्नाद् भवन्ति भूतानि, the verb भवन्ति is third-person PLURAL. A student says 'it is plural because अन्न (food) is a mass of many grains.' The correct grammatical account is:

- (A) the verb is plural because the ablative अन्नाद् stands for many grains of food
- (B) the verb takes whichever number sounds best in the line, regardless of agreement

(C) the verb is plural because it falls in the middle of the sentence

(D) a finite verb agrees with its nominative SUBJECT, and the subject is भूतानि (neuter nom. pl.); the ablative अन्नाद् is not the subject and does not govern the verb's number

13. भूत is नपुंसकलिङ्ग. A teacher asks for the form to be used in BOTH 'beings arise' (subject) and 'he protects the beings' (object). The single correct form for both is:

(A) भूताः for the subject and भूतान् for the object, following the masculine pattern

(B) भूतानि — neuter a-stems show identical nominative and accusative plural

(C) भूतानि for the subject and भूतान् for the object

(D) भूतैः for both, since the instrumental serves subject and object alike

14. Both भवन्ति and भूतानि stand in the verse and both come from √भू, yet a grammarian insists they belong to different word-classes. The precise difference is that:

(A) भवन्ति is a finite present-tense verb ('they come to be'), while भूतानि is a noun ('beings') built on भूत, the past participle of √भू

(B) both are verbs of √भू, one present and one past, describing the same action twice

(C) both are nouns of √भू, differing only in number

(D) भवन्ति is the noun and भूतानि is the verb, the reverse of their usual roles

15. A reader argues भूतानि must mean 'ghosts' because भूत means 'ghost' in colloquial Hindi. The chapter's decisive refutation rests on:

(A) the plural ending -आनि, which by itself forces the meaning 'beings'

(B) the rule that Sanskrit भूत can never carry any ghost-related sense anywhere

(C) context plus etymology — within a verse on food sustaining all that lives, the √भू sense 'that which has come to be' (a living being) fits, while the later folk 'ghost' sense does not

(D) the gender, since भूत is feminine and feminine भूत must mean 'beings'

16. In अन्नात् + भवन्ति → अन्नाद्भवन्ति the त् voices to द्. A student concludes 'so त् always becomes द् before any consonant.' The corrected rule is:

(A) yes, त् becomes द् before every following consonant without exception

(B) a final unvoiced त् voices to द् only before a VOICED consonant (like भ); before an unvoiced consonant it does not voice (e.g. before च् it would assimilate to च)

(C) त् becomes द् only at the very end of a sentence, never inside a phrase

(D) त् becomes द् only before nasals, turning words like तन्मात्र

17. By the very rule that turns अन्नात् + भवन्ति into अन्नाद्भवन्ति, which join is INCORRECT?

(A) तत् + भवति → तद्भवति (त् voices to द् before voiced भ)

(B) जगत् + ईशः → जगदीशः (त् voices to द् before a voiced vowel)

(C) सत् + भावः → सद्भावः (त् voices to द् before voiced भ)

(D) तत् + चित् → तद्चित् (voicing to द् before चित्)

18. Undoing the sandhi अन्नाद्भवन्ति, a pupil splits it as अन्न + अद्भवन्ति. The correct split, and why, is:

- (A) अन्नाद् + भवन्ति, treating द् as the genuine, original ending of the word
- (B) अन्न + अद्भवन्ति, because अद्- is a real prefix meaning 'eating'
- (C) अन्नाद + भवन्ति, with a short final vowel on the first word
- (D) अन्नात् + भवन्ति — the surface द् is only the voiced form of the ablative's underlying त्, so the recovered ending is त्, not द् and not a stray अद्

19. Which statement about the sandhi in अन्नाद्भवन्ति is FALSE?

- (A) the त् of अन्नात् becomes the voiced द्
- (B) the change happens because the following sound भ् is voiced
- (C) the voicing converts अन्नात् from the ablative case into the nominative case
- (D) after the change the word is still ablative ('from food')

20. वाक् + ईशः and षट् + मासाः both place a final unvoiced stop before a voiced sound. By the SAME voicing principle seen in अन्नाद्भवन्ति, the expected results are:

- (A) वाक्ईशः and षट्मासाः — final stops never change before what follows
- (B) वाक्खीशः and षट्मासाः — the final stops aspirate before the next sound
- (C) वाक्क्षीशः and षट्षासाः — the final stops double before the next sound
- (D) वाक्गीशः and षण्मासाः — the final क्/ट् move toward voiced/assimilated forms before the following voiced sounds

21. A grammarian groups भवन्ति, सम्भवः and समुद्भवः and asks what their shared √भू tells us about the verse's logic. The correct inference is that:

- (A) every link is a coming-into-being from its source — the prefixes सम्-/समुद्- only colour the 'arising', they do not change it into making or destroying
- (B) the prefixes सम्- and समुद्- change √भू into a root meaning 'to make', so the chain is manufacture
- (C) the prefixes turn √भू into a root meaning 'to destroy', so each link consumes the last
- (D) all three are merely different spellings of the same word with no real arising

22. In पर्जन्यादन्नसम्भवः the word सम्भवः is a NOUN ('the arising of food'), whereas the first line's भवन्ति is a finite verb. The point this contrast makes about the verse's style is that:

- (A) the verse rings the changes on one root √भू — now as a verb, now as a noun — to keep hammering that each link is a 'becoming' from its source
- (B) the verse abandons √भू at this point and switches to a root meaning 'to make'
- (C) the noun सम्भवः proves food already arose in the past and no longer arises
- (D) the shift from verb to noun shows the chain has reversed direction at this link

23. A pupil parses भूतानि as the singular of a feminine noun. Correct ALL the errors at once:

- (A) it is indeed feminine but plural, so only 'singular' is wrong
- (B) it is indeed singular but neuter, so only 'feminine' is wrong

(C) both 'singular' and 'feminine' are correct

(D) भूत is a neuter noun and भूतानि is its plural (nom./acc.), so 'singular' and 'feminine' are both wrong

24. जानीयात् is the form the chapter uses for 'one should know the order of creation.' The single element of its SHAPE that signals the optative (विधिलिङ्) rather than the present जानाति is:

(A) the -ईय- inserted before the personal ending (जान-ईय-त्), which the present जानाति lacks

(B) the initial जा-, which appears only in the optative

(C) the final -त्, which appears only in the optative

(D) the absence of any prefix, which only the optative shows

25. Match the √ज्ञा forms to their mood/tense: जानीयात्, जानाति, ज्ञास्यति, जानीहि.

(A) जानीयात् = present; जानाति = future; ज्ञास्यति = imperative; जानीहि = optative

(B) जानीयात् = imperative; जानाति = optative; ज्ञास्यति = present; जानीहि = future

(C) जानीयात् = optative ('should know'); जानाति = present ('knows'); ज्ञास्यति = future ('will know'); जानीहि = imperative ('know!')

(D) all four are the optative of √ज्ञा, differing only in person

26. The chapter glosses जानीयात् with अवगच्छेत्. A student says 'the gloss just gives the meaning; its form is irrelevant.' The sharper point is that:

(A) the gloss changes the mood to the present, showing जानीयात् really means 'knows'

(B) the gloss changes the tense to the past, showing जानीयात् really means 'knew'

(C) the gloss was deliberately ALSO an optative (अवगच्छेत्), preserving the 'should/ought' MOOD, not merely the dictionary meaning

(D) the gloss changes the form to an imperative, showing जानीयात् really means 'know!'

27. Sanskrit gives moral counsel with the optative: सत्यं वदेत्, अहिंसां पालयेत्. A student wants to render 'a student should know the cycle' on the SAME pattern, but writes छात्रः उत्पत्तिक्रमं ज्ञास्यति. The correct version is:

(A) छात्रः उत्पत्तिक्रमं ज्ञास्यति is already right, since the future implies obligation

(B) छात्रः उत्पत्तिक्रमं जानाति — the present states the duty

(C) छात्रः उत्पत्तिक्रमम् अजानात् — the past expresses what one ought to do

(D) छात्रः उत्पत्तिक्रमं जानीयात् — the optative carries the 'should' force, matching वदेत्/पालयेत्

28. How does the optative जानीयात् differ in FORCE from both the imperative जानीहि and the future ज्ञास्यति?

(A) जानीयात् gently advises 'one should know'; जानीहि bluntly commands 'know!'; ज्ञास्यति merely predicts 'will know' — three different forces

(B) all three express the same mild advice, differing only in spelling

(C) जानीयात् commands, जानीहि advises, and ज्ञास्यति forbids

(D) जानीयात् and ज्ञास्यति both command, while जानीहि predicts

29. ज्ञेयः is the -य gerundive of √ज्ञा. Just as कृत ('done') yields कार्य ('to be done'), ज्ञेय stands to ज्ञात ('known') as its:

- (A) plural form — 'many things known' (B) agent noun — 'one who knows'
- (C) abstract noun — 'knowledge itself'
- (D) 'to-be-known' counterpart — the passive necessity form, 'that which ought to be known'

30. Which sentence uses ज्ञेयः with its correct passive-prescriptive (gerundive) sense?

- (A) सः उत्पत्तिक्रमं ज्ञेयः — 'he knew the order of creation'
- (B) ज्ञेयः नाम बालकः आसीत् — 'there was a boy named Jneya'
- (C) उत्पत्तिक्रमः सर्वैः ज्ञेयः — 'the order of creation is to be known by all'
- (D) उत्पत्तिक्रमं ज्ञेयः गच्छति — 'the one to be known goes to the cycle'

31. The chapter sets four √ज्ञा derivatives side by side: जानीयात्, ज्ञेयः, ज्ञाता, ज्ञात. The row that classifies ALL FOUR correctly is:

- (A) जानीयात् = gerundive; ज्ञेयः = past participle; ज्ञाता = optative; ज्ञात = agent noun
- (B) जानीयात् = agent noun; ज्ञेयः = optative; ज्ञाता = past participle; ज्ञात = gerundive
- (C) all four are past participles of √ज्ञा differing only in gender
- (D) जानीयात् = optative ('should know'); ज्ञेयः = gerundive ('to be known'); ज्ञाता = agent noun ('a knower'); ज्ञात = past participle ('known')

32. The gerundive ज्ञेयः contrasts with the present participle जानन् ('knowing / one who knows'). The cleanest statement of the contrast is:

- (A) ज्ञेयः is active and present, जानन् is passive and prescriptive — the reverse
- (B) ज्ञेयः is passive and prescriptive ('that which is TO BE known', focused on the object); जानन् is active and present ('one who is knowing', focused on the doer)
- (C) both are active present forms differing only in number
- (D) both are passive past forms differing only in gender

33. If one wanted 'the cycle of creation must be understood' using the -तव्य gerundive of √बुध् (parallel to ज्ञेयः from √ज्ञा), the correct phrase is:

- (A) उत्पत्तिक्रमं बुध्यते — a present verb, 'is understood'
- (B) उत्पत्तिक्रमम् अबुध्यत — a past verb, 'was understood'
- (C) उत्पत्तिक्रमः बोद्धव्यः
- (D) उत्पत्तिक्रमस्य बोधः — a noun, 'understanding of the cycle'

34. The chapter distinguishes three look-alike words. The row pairing each with its CORRECT gender and sense is:

- (A) ब्रह्म = masculine, a priest; ब्रह्मा = neuter, the Absolute; ब्रह्मन् = the creator-god
- (B) ब्रह्म = neuter, the all-pervading Absolute; ब्रह्मा = masculine, the creator-god; ब्रह्मन् = a priest
- (C) ब्रह्म = the creator-god; ब्रह्मा = a priest; ब्रह्मन् = the neuter Absolute
- (D) all three are neuter and mean the impersonal Absolute

35. The chapter glosses ब्रह्म as सर्वव्याप्तः परमेश्वरः. A student takes सर्वव्याप्तः to mean 'all-powerful.' The precise meaning, and why it matters, is:

- (A) सर्वव्याप्तः means 'all-PERVADING' (present everywhere), which is exactly why ब्रह्म can be the ground present within every link of the cycle
- (B) 'all-powerful' — able to do anything, hence able to command the cycle
- (C) 'all-knowing' — aware of everything, hence the witness of the cycle
- (D) 'all-merciful' — kind to everyone, hence the protector of the cycle

36. Why does the chapter say the food–rain–yajna cycle 'rests in' the NEUTER ब्रह्म rather than the masculine ब्रह्मा?

- (A) the neuter merely makes ब्रह्म weaker than the masculine ब्रह्मा
- (B) the neuter makes ब्रह्म an inert object like a stone, unfit to ground anything
- (C) the neuter signals an impersonal, beyond-gender principle pervading the whole cycle, whereas ब्रह्मा would name a single personal creator-figure standing apart from it
- (D) the neuter makes ब्रह्म grammatically plural, i.e. a crowd of gods

37. Complete with the right 'Brahma' word: 'The fire-ritual was conducted by the _____, who chanted the mantras and tended the flame.'

- (A) ब्रह्मन् (the priest)
- (B) ब्रह्म (the neuter Absolute)
- (C) ब्रह्मा (the creator-god)
- (D) रसायन (chemistry)

38. Because the verse joins its links with ablatives ('from X') rather than naming any maker, it refrains from implying a personal builder at the food-link. This fits the chapter's framing of the cycle as grounded in:

- (A) ब्रह्मा, the personal creator-god who fashions each being by hand
- (B) ब्रह्म, the impersonal all-pervading Power — not a personal manufacturer
- (C) ब्रह्मन्, a human priest who performs the making
- (D) pure random chance, with no underlying ground at all

39. A pupil writes that ब्रह्म, being neuter, must be 'a thing without life, like a pot.' The chapter's correction is that the neuter here marks:

- (A) literal inertness, so ब्रह्म is indeed a lifeless object
- (B) not lifelessness but impersonality — a conscious, all-pervading ground that is simply beyond the personal 'he/she' categories
- (C) femininity, so ब्रह्म is really a goddess in disguise
- (D) plurality, so ब्रह्म names many gods at once

40. In Gita 3.14, यज्ञ is taken in its BROADEST sense. A student narrows it to 'image-worship in a temple.' The correct broad sense is:

- (A) image-based devotional worship in a temple (पूजा)
- (B) the modern science of chemistry (रसायनशास्त्रम्)

(C) any meal eaten as a religious obligation

(D) selfless, well-directed action (कर्म offered without selfish motive), of which the fire-ritual is just one form

41. Suppose the chain dropped the यज्ञ step, reading कर्म → पर्जन्य → अन्न → भूतानि. The deepest loss of meaning would be that:

(A) the chain would be shorter but mean exactly the same thing

(B) rain would now arise from food instead of from action

(C) beings would no longer depend on food at all

(D) any action whatever would seem to sustain rain, erasing the verse's point that it is specifically SELFLESS action (yajna) that upholds the cycle

42. A pupil says 'यज्ञ and पूजा are just two words for the same act.' The best correction the chapter supports is:

(A) they are indeed identical in every respect

(B) यज्ञ means chemistry and पूजा means a herb

(C) they overlap as forms of worship but differ in ritual tradition — यज्ञ centres on a fire-offering, पूजा on devotional (often image-based) worship

(D) यज्ञ is past tense and पूजा is future tense, so they differ only in time

43. Given that the verse's यज्ञ means selfless action, which everyday act would BEST count as यज्ञ in this broad sense?

(A) a merchant lighting a temple lamp solely to win a profitable deal

(B) a farmer growing extra grain and sharing it freely with the hungry, expecting nothing in return

(C) a person performing a fire-ritual chiefly to be praised by neighbours

(D) a student memorising the verse only to score marks in an exam

44. Why does the verse make rain depend on यज्ञ (selfless action) rather than directly on कर्म (action of any sort)?

(A) to teach that not bare activity but rightly-motivated, selfless action sustains nature's cycle — making the verse a moral teaching, not merely a description

(B) because कर्म and यज्ञ are unrelated, and rain happens to follow ritual by chance

(C) because कर्म cannot precede यज्ञ in time, so rain must skip the action-link

(D) because rain is produced by पूजा, and यज्ञ is only its other name

45. ओषधीनाम् ends in -ईनाम्. This identifies ओषधि as which stem-class, and the form as which case-and-number?

(A) an ī/i-stem feminine noun; the form is genitive plural ('of herbs')

(B) an a-stem masculine noun; the form is ablative singular

(C) a consonant-stem neuter noun; the form is nominative plural

(D) a u-stem noun; the form is accusative singular

46. In 'rain helps the growth OF herbs', ओषधीनाम् translates as 'of the herbs.' Which different ending would be needed for 'rain falls ON the herbs (location)'?

- (A) the same genitive plural ओषधीनाम्, since location and possession share a form
- (B) the locative plural ओषधीषु ('on/among the herbs')
- (C) the ablative plural ओषधिम्यः ('from the herbs')
- (D) the dative plural ओषधिम्यः ('to the herbs')

47. Where does ओषधि (herbs/plants) fit most naturally in the life-cycle the chapter describes, and why?

- (A) between rain and food/beings — rain nourishes herbs/plants, which become the food that sustains beings
- (B) as the source of yajna, replacing action at the head of the chain
- (C) as a synonym for ब्रह्म, the all-pervading Absolute
- (D) as the modern science of chemistry, replacing रसायनशास्त्रम्

48. Suppose every ओषधि on earth vanished while rain continued. Mapping this onto the chapter's cycle, the most accurate prediction is:

- (A) nothing would change, since herbs are not part of the verse's cycle at all
- (B) rain would stop first, because herbs are the source of rain
- (C) beings would be unaffected, since beings come straight from rain, not food
- (D) food would fail despite the rain, because the plant-link that turns rain into food is broken, and beings would then suffer in turn

49. रसायनशास्त्रम् analyses as रसायन + शास्त्रम्. The element शास्त्रम् contributes the meaning:

- (A) 'a herb or medicinal plant' (B) 'a fire-offering ritual'
- (C) 'science / systematic discipline / treatise' (D) 'the all-pervading Absolute'

50. रसायन once named Ayurvedic rejuvenation tonics but now names chemistry. The deeper point about Sanskrit this illustrates is that it:

- (A) has no scientific vocabulary of its own and must borrow from English
- (B) shows only an unrelated coincidence between the two senses of रसायन
- (C) is a living language able to re-coin old roots for new ideas, much as English borrows Greek/Latin terms for new sciences
- (D) proves chemistry was already a fully developed modern science in ancient India

51. The chapter links the ancient verse to रसायनशास्त्रम्. A student concludes 'modern chemistry has disproved the Gita verse.' The intended takeaway is rather that:

- (A) modern chemistry has proved the Gita verse false
- (B) an ancient insight about food and life and a modern science can describe the SAME interdependent world from different angles
- (C) the Gita verse is really a chemistry textbook in disguise
- (D) ancient Sanskrit thought and modern science can never meet

- 52.** Which pair of meanings — for रसायनशास्त्रम् and for शास्त्रम् separately — is BOTH correct?
- (A) रसायनशास्त्रम् = astronomy; शास्त्रम् = a herb (B) रसायनशास्त्रम् = grammar; शास्त्रम् = a ritual
 (C) रसायनशास्त्रम् = chemistry; शास्त्रम् = science/treatise
 (D) रसायनशास्त्रम् = medicine only; शास्त्रम् = the Absolute
- 53.** उत्पत्तिक्रमम् is the OBJECT of जानीयात् ('one should know the order of creation'). Its accusative-singular ending marks its कारक role as the:
- (A) कर्ता (subject) — the one who knows
 (B) कर्म (direct object) — the thing that is to be known
 (C) करण (instrument) — the means of knowing
 (D) अपादान (source) — that from which the knowing comes
- 54.** उत्पत्तिक्रमम् analyses as उत्पत्ति ('arising/origination') + क्रम ('order/sequence'). The compound therefore means:
- (A) 'the destruction of order' — the breakdown of sequence
 (B) 'a single act of arising' — one origination only
 (C) 'the order/sequence of arising' — the step-by-step way things come to be
 (D) 'a sequence with no origin' — order lacking any beginning
- 55.** A student claims 'अन्नाद् is nominative, भूतानि means ghosts, जानीयात् is past, and ज्ञेयः is an agent-noun.' How many of these FOUR claims are wrong?
- (A) only two are wrong (B) only three are wrong
 (C) all four are wrong (D) only one is wrong
- 56.** Which single sentence correctly combines the verse's grammar AND meaning end-to-end?
- (A) अन्नाद् (ablative 'from food') + भवन्ति (present 'come to be') + भूतानि (neuter nom. pl. 'beings') = 'from food, beings come to be'
 (B) अन्नाद् (nominative 'food') + भवन्ति (optative 'should be') + भूतानि (ghosts) = 'food should become a ghost'
 (C) अन्नाद् (accusative 'food') + भवन्ति (past 'became') + भूतानि (sacrifices) = 'food became sacrifices'
 (D) अन्नाद् (dative 'for food') + भवन्ति (future 'will be') + भूतानि (herbs) = 'herbs will be for food'
- 57.** Summing up the chapter, the MOST complete and accurate statement is:
- (A) beings make their own food, so the cycle needs neither rain nor yajna nor action
 (B) ghosts arise from food, and one already knew (past tense) the whole cycle long ago
 (C) all beings arise from food, food from rain, rain from yajna, yajna from action — an interdependent cycle grounded in the all-pervading ब्रह्म, which a student SHOULD know (जानीयात्)
 (D) food is the personal creator-god who builds every being individually from nothing

58. Why is it MORE accurate to call Gita 3.14 a cycle of 'interdependence' than a chain of 'command', given its grammar?

- (A) because the verse uses imperative commands at each link, showing a chain of orders
- (B) because the links are listed in random order, which only command-language allows
- (C) because the ablative is a case of authority, marking who commands whom
- (D) every link is tied by an ablative of source, expressing dependence on a prior link, with no word implying that one link ORDERS another

59. Putting the whole verse together and reading it WITH its grammar, अन्नाद् भवन्ति भूतानि most precisely teaches that:

- (A) beings deliberately manufacture their own food and so need no source
- (B) all living beings emerge from food as their source (ablative), in a present, ongoing way (भवन्ति) — not that any maker fabricates them
- (C) food is a personal creator-god that builds each being from nothing
- (D) ghosts arise from food, and the arising already happened in the past

60. Tying the four threads together — the ablative chain, the √भू verbs, the neuter ब्रह्म, and the optative जानीयात् — the chapter's single most integrated lesson is that:

- (A) the world is a hierarchy of commands issued by a personal creator who fashions each being, a fact already known in the past
- (B) the world is one interdependent becoming, each thing arising from its source, all resting on the impersonal all-pervading ground, and this order is something every student OUGHT to understand
- (C) the world is a set of independent things, each manufacturing itself, with knowing the order being forbidden
- (D) the world is governed by random chance, and the optative shows the order can never be known

Solutions — Sanskrit (Class 7), Chapter 9: अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani) — Paper 5

Paper 5 — (progressively harder)

Marking: +4 correct, –1 wrong, 0 unattempted. Maximum marks **240**.

10	B	20	D	30	C	40	D	50	C	60	B

Answer-key distribution: A = 15, B = 15, C = 15, D = 15.

Worked Solutions

1. (D) Each source in the verse appears in the ablative as the thing another link comes from; beings appear only as what arises from food, with no further link drawn out of them, so they close the chain rather than feed it. Counting beings as a source would require a clause 'from beings, X arises', which the verse never gives; the claim that beings source action confuses the actor with a verse-link the text does not state, and number or gender does not bar a word from being a source.

2. (A) Rain is produced by yajna (यज्ञाद्भवति पर्जन्यः) and in turn feeds food, which sustains beings, so it sits mid-stream as both effect and onward cause. Action is the head and is not produced by yajna; yajna is produced by action not by rain; beings are the tail and cause nothing further in the verse.

3. (B) The wheel turns because the beings sustained by food are the agents who carry out action (including selfless yajna), so the tail feeds the head and participation keeps it

spinning. Food and rain are intermediate products, not the doers of action, and ब्रह्म is the all-pervading ground of the whole wheel, not a substitute for the action-link.

4. (A) Yajna in the verse directly produces rain, so an absence of yajna strikes the rain-link first and only then cascades down through food to beings. Food and beings sit further along the chain and fail later, and action is the upstream cause that is not itself produced by yajna.

5. (B) Every link is joined by an ablative-of-source, and an ablative cannot be flipped without flipping which thing is the origin; reversing the arrows therefore asserts false sources the verse never states. The order is fixed by those cases, beings are named first only for emphasis not as a source, and the √भू verbs mark arising, not destruction.

6. (D) The chapter explicitly ties the ancient cycle to modern science (e.g. रसायनशास्त्रम्) to show two angles on one interdependent world, so an added biological loop only deepens, not contradicts, the same lesson. Naming different links does not make them contradictory, the chapter denies the 'never meet' view, and it does not claim the verse is a science text.

7. (D) All three -आत् forms name the origin from which something proceeds, which is precisely the अपादान कारक carried by the ablative. The instrument (करण), recipient (सम्प्रदान) and location (अधिकरण) are different कारक roles taking instrumental, dative and locative respectively, none of which means 'from'.

8. (A) Agency/means is the instrumental (अन्नेन), but the verse uses the ablative अन्नात्, which marks the source of emergence rather than a doer; beings come FROM food, they are not fabricated BY it. The dative would wrongly mean 'for food' and the genitive 'of food', neither of which expresses the source the ablative gives.

9. (C) The source 'seeds' must stand in the ablative plural बीजेभ्यः ('from the seeds') while the product अङ्कुराः is the nominative subject the verb agrees with, exactly mirroring अन्नात्/भूतानि. The nominative बीजानि makes seeds the subject, the locative बीजेषु means 'in the seeds', and the dative बीजाय means 'for a seed' — none expresses 'from'.

10. (B) Cases follow कारक relations: the source-of-emergence (अपादान) is food, so food is ablative, while the thing that arises is the subject in the nominative; importance, length, or position do not decide case. The other options invent non-grammatical criteria or contradict the very definition of अपादान.

11. (A) For an अ-stem like अन्न the ablative singular is अन्नात् and the dative singular is अन्नाय — distinct forms — so the morphology alone proves it is ablative. The two cases are not homophonous here, and 'becoming' does not force a dative; the source-meaning and the -आत् form agree.

12. (D) Agreement is with the nominative subject भूतानि, which is plural, so the verb is plural; the ablative source plays no part in determining the verb's number. The 'many grains' idea, the euphony idea, and the position idea all ignore the rule that the verb agrees with its subject's number.

13. (B) Neuter a-stem nouns have one and the same form (भूतानि) for nominative and accusative plural, so it serves as both subject and object. भूताः/भूतान् are masculine endings and भूतैः is the instrumental, none of which is the neuter nom./acc. plural the question needs.

14. (A) One is a conjugated verb expressing the act of becoming; the other is a participle pressed into service as a noun naming the things that have become. They are not both verbs, not both nouns, and their categories are not swapped — the finite verb is भवन्ति and the noun is भूतानि.

15. (C) The word literally means 'that which has come to be', and a life-cycle verse selects exactly that 'living being' sense; the ghost sense, a later popular extension, does not fit the topic. The plural ending does not fix meaning, the ghost sense does exist in some Sanskrit texts, and भूत is neuter, not feminine.

16. (B) The voicing is triggered specifically by the voicedness of the following sound, so it applies before voiced consonants but not before unvoiced ones, where a different (assimilative) change occurs. It is therefore neither unconditional, nor sentence-final-only, nor limited to nasals.

17. (D) Before the UNVOICED च् the त् does not voice to द्; it assimilates toward च् instead, so तद्चित् is wrong (the correct sandhi is तच्चित्/तश्चित्-type). The other three all join a final त् to a voiced sound (भ् or a vowel), so they correctly voice to द् just as in अन्नाद्भवन्ति.

18. (D) The d-sound is the sandhi surface of an underlying ablative त्, so the genuine first word is अन्नात्; the द् is not an original ending, अद्- is not a prefix here, and there is no short-vowel stem अन्नाद. Restoring त् recovers the true ablative अन्नात्.

19. (C) Sandhi alters only the surface sound, never the grammatical case, so अन्नाद् remains the ablative 'from food'; the claim that it becomes nominative is false. The other three correctly state the t→d voicing, its voiced-भ् trigger, and the unchanged case.

20. (D) A final unvoiced stop before a voiced sound shifts toward the voiced/assimilated series — क्→ग् before the voiced vowel (वागीशः) and ट्→ण् before the nasal म् (षण्मासाः) — the same voicing/assimilation principle as त्→द् in अन्नाद्. The alternatives keep the stops unchanged, aspirate them, or double them, none of which is the attested sandhi.

21. (A) All three derive from √भू ('become'), so each step is an arising-from-a-source; the prefixes सम्- ('together') and समुद्- ('up/forth together') intensify or shade the becoming but

never convert it into making or destroying. Nor are they mere spelling variants — one is a finite verb and two are derived nouns of the same root.

22. (A) Using √भू first as a verb (भवन्ति) and then as a noun (सम्भवः) repeats the becoming-idea across word-classes, reinforcing the single theme of emergence-from-a-source. It does not switch roots, does not push the arising into the past, and does not reverse the chain's direction.

23. (D) भूत is नपुंसकलिङ्ग (neuter), and the -आनि ending is the neuter plural, so the pupil is wrong on both gender and number. The two distractors each concede one false claim, and the last endorses both errors.

24. (A) The optative marker here is the -ईय- formant before the ending; जानाति shares the जा- and ends in -त् too, so neither of those distinguishes the moods, and prefix-absence is not an optative signal. Only the -ईय- sets जानीयात् apart from the present.

25. (C) जानीयात् is विधिलिङ् (advice), जानाति is लट् (present fact), ज्ञास्यति is लृट् (future), and जानीहि is लोट् (direct command). The other rows shuffle these labels or wrongly fold all four into the optative.

26. (C) Explaining an optative with another optative keeps the prescriptive 'ought' force intact, which is why the gloss-form matters and is not irrelevant. The gloss does not shift the mood to present, the tense to past, or the form to a command.

27. (D) वदेत् and पालयेत् are optatives of counsel, and the matching 'should know' is the optative जानीयात्; ज्ञास्यति merely predicts a future fact, not an obligation. जानाति states a present fact and अजानात् reports the past — neither expresses 'should'.

28. (A) The optative counsels what ought to be done, the imperative orders it directly, and the future simply foretells it — three distinct shades of force. The distractors equate them, swap the command/advice roles, or misassign prediction and command.

29. (D) The -य gerundive expresses 'to be X-ed', so ज्ञेय means 'to be known', exactly as कार्य means 'to be done'. It is neither a plural of the participle, nor the agent (ज्ञाता), nor the abstract noun (ज्ञानम्).

30. (C) A gerundive takes its agent in the instrumental (सर्वैः) and means 'is to be known', so the passive-prescriptive sentence is correct. The others treat ज्ञेयः as a past verb, as a proper name, or as an active subject — none of which is the gerundive use.

31. (D) Each is a distinct derivation: an optative verb, a -य gerundive, an agent noun, and a past passive participle. The other rows scramble the four labels or wrongly call all of them past participles.

32. (B) The gerundive looks to the object as something that ought to be known (passive necessity), while the present participle looks to the agent doing the knowing (active, ongoing). The distractors reverse the two or wrongly make them the same type.

33. (C) बोद्धव्यः is the -तव्य gerundive ('to be/must be understood'), the structural twin of the -य gerundive ज्ञेयः. The other three are a present verb, a past verb and an abstract noun — none expresses the prescriptive 'must be understood'.

34. (B) ब्रह्म (neuter) is the impersonal Absolute, ब्रह्मा (masculine) the creator-god, and ब्रह्मन् a priestly officiant. The other rows misassign the genders and meanings or wrongly collapse the three into one.

35. (A) व्याप्त means 'pervaded/spread through', so सर्वव्याप्त is 'pervading all' — omnipresence, which fits a ground immanent in every link. Power, knowledge and mercy are different ideas (omnipotence, omniscience, compassion), not what सर्वव्याप्त states.

36. (C) Neuter gender here marks an impersonal, ungendered ground, apt for an all-pervading principle immanent in every link; the masculine ब्रह्मा would be a personal creator distinct from the cycle. Neuter does not mean weakness, inertness, or plurality.

37. (A) A human officiant who chants and tends the fire is the priest, ब्रह्मन्. The impersonal Absolute (ब्रह्म) and the creator-god (ब्रह्मा) are not ritual officiants, and रसायन means chemistry.

38. (B) Ablative-of-source language avoids an agent-maker, matching an impersonal, immanent ground rather than a personal fabricator. It is therefore not the creator ब्रह्मा, not the priest ब्रह्मन्, and not groundless chance.

39. (B) Sanskrit neuter for ब्रह्म conveys that the Absolute is impersonal and beyond gender, not that it is an inert object; the chapter treats it as the conscious all-pervading ground (सर्वव्याप्तः परमेश्वरः). It is neither lifeless, nor feminine, nor plural.

40. (D) In the verse यज्ञ widens to mean selfless action in general, with fire-ritual as one instance; it is not narrowed to temple पूजा, not chemistry, and not a meal. This breadth is why यज्ञ, not mere ritual, sustains the cycle.

41. (D) The यज्ञ step specifies that selfless action, not action of any kind, sustains the cycle; remove it and even purely selfish action would seem to qualify, losing the moral force. The chain's meaning would change, rain's source would not shift to food, and beings would still depend on food.

42. (C) Both are worship, yet they differ in form — यज्ञ as a fire-offering ritual, पूजा as devotional (often image-centred) worship — so they are not identical. They are not chemistry/herb, and both are nouns, not tense-forms.

43. (B) यज्ञ in its broad sense is action offered without selfish motive, so freely sharing food fits exactly. The other three are acts done for personal gain, praise or marks — the selfish motive disqualifies them as यज्ञ even when they wear ritual or scholarly dress.

44. (A) By routing rain through यज्ञ the verse insists that selfless action, not mere busyness, upholds the cycle, giving the chain its ethical edge. कर्म is in fact the source of यज्ञ in the verse (not unrelated), the time-order objection is invented, and पूजा is a different ritual tradition, not the producer of rain here.

45. (A) The -ईनाम् ending is the genitive plural of an ī/i-stem feminine like ओषधि, giving 'of herbs'. The other parses misname both the stem-class and the case-number.

46. (B) Location is the locative, whose plural for ओषधि is ओषधीषु; 'of the herbs' (genitive ओषधीनाम्) marks relation, not place. The ablative/dative plural ओषधिभ्यः would mean 'from/to the herbs', neither of which is location.

47. (A) Plants are the link that converts rain into food on which beings live, so herbs sit between rain and food. They are not the source of yajna, not the Absolute, and not chemistry.

48. (D) Herbs/plants convert rain into food, so removing them breaks that conversion: food fails even though rain falls, and beings then go hungry. Herbs are not the source of rain, and beings do not arise directly from rain but through food.

49. (C) शास्त्रम् denotes a systematic body of knowledge or treatise, so रसायनशास्त्रम् is the science of chemistry. It does not mean a herb, a ritual, or the Absolute.

50. (C) Re-using an old word for a new discipline shows a living language adapting its own vocabulary, paralleling English's classical coinages. It does not show poverty of vocabulary, mere coincidence, or that modern chemistry already existed in antiquity.

51. (B) The chapter pairs verse and science to show two angles on one world, not a contest one side wins. So chemistry neither refutes the verse, nor is the verse a chemistry text, nor are the two forever separate.

52. (C) रसायनशास्त्रम् is chemistry and शास्त्रम् is a science or treatise; both halves are correct only in the first pair. The others give astronomy/grammar/medicine and herb/ritual/Absolute, which are wrong on one or both counts.

53. (B) The accusative marks the कर्म, the thing acted upon, here the order-of-creation that is known. The knower is the कर्ता (nominative), the means is the करण (instrumental), and the source is the अपादान (ablative).

54. (C) Joining 'arising' with 'order' yields the sequence in which things come to be — exactly the cycle the student should know. It is not destruction, not a single act, and not an

origin-less sequence.

55. (C) अन्नाद् is ablative (not nominative), भूतानि means 'beings' (not ghosts), जानीयात् is optative (not past), and ज्ञेयः is a gerundive 'to be known' (not an agent-noun, which would be ज्ञाता) — four errors in all.

56. (A) Only the first gets all three right: ablative source, present-tense plural verb, and neuter nominative plural subject 'beings'. The others misassign the case of अन्नाद्, the form/tense of भवन्ति, and the meaning of भूतानि.

57. (C) The full picture keeps the ablative chain, the impersonal ground ब्रह्म, and the optative duty to know it. The distractors break the chain, mistranslate भूतानि and the tense, or replace the impersonal ground with a personal maker.

58. (D) Ablatives express 'arising from', i.e. dependence, and the verse contains no commanding (imperative) force, so 'interdependence' is the better label. There are no imperatives, the order is not random, and the ablative marks source, not authority.

59. (B) The ablative gives source-not-maker and the present भवन्ति gives an ongoing arising, so beings continually emerge from food. The distractors reverse the source, posit a personal maker, or mistranslate भूतानि and the tense.

60. (B) The ablatives give dependence, the √भू verbs give becoming, the neuter ब्रह्म gives an impersonal immanent ground, and the optative जानीयात् gives the duty to know — together an interdependent becoming one ought to understand. The distractors swap dependence for command/independence/chance, the impersonal ground for a personal maker, and the duty-to-know for past knowledge or a prohibition.
