

Olympiad Test Paper — Sanskrit (Class 7) — Paper 4

Chapter 3: मित्राय नमः (Mitraya Namah)

Paper 4 — (progressively harder)

Subject	Sanskrit (NCERT Class 7, Deepakam)
Chapter	3 — मित्राय नमः (Mitraya Namah)
Total Questions	60 (Multiple Choice, single correct)
Maximum Marks	240
Suggested Time	90 minutes

Marking scheme: +4 for each correct answer · -1 for each wrong answer · 0 if unattempted.

Instructions: Each question has four options (A), (B), (C), (D); exactly one is correct. National-olympiad traps: नमः/स्वाहा/स्वस्ति idiomatically govern the DATIVE (चतुर्थी) — never nominative/accusative/genitive — with stem-dependent endings (-आय for अ-stems, -ये/-वे for इ/उ-stems, -ायै for आ-stem feminines); मित्र here is a Sun-NAME, the equivalent (एकार्थक) of रवि/भानु/आदित्य/सविता/पूषा, not 'friend' or the moon; सूर्यनमस्कारः is ONE समास whose first member drops its case ending (≠ the two words सूर्याय नमस्कारः); स्वस्थ = स्व+स्थ (self-abiding), glossed नीरोगम्; exactly TWELVE postures = TWELVE Sun-names = TWELVE months; आचार्या (-आ, fem.) vs आचार्यः (-ः, masc.); the four fruits स्वस्थं शरीरम्/वीर्यम्/तेजः/प्रज्ञा are distinct, not synonyms. Do not write on this paper — mark answers on your answer sheet.

1. A grammarian classifies the words that govern the dative in this chapter — नमः, स्वस्ति, स्वाहा — under one label. The most precise reason they share dative government is that all three are:

- (A) finite verbs derived from a single common root meaning 'to bow'
- (B) nouns that themselves stand in the dative and pass the case to the next word
- (C) adjectives that must agree with the following noun in case and number
- (D) indeclinable particles (अव्यय) whose object is fixed in the dative by idiom, not by an inflecting verb's action

2. Consider the chain: नमः forces the dative → मित्र is an अ-stem → its dative is मित्राय. If instead the Sun-name to be saluted were the इ-stem रवि, the single-word mantra would correctly read:

- (A) रव्याय नमः
- (B) रविः नमः
- (C) रवये नमः
- (D) रवीय नमः

3. A pupil argues: 'Since मित्राय means "to the friend", मित्राय नमः must describe two people — a friend and a worshipper.' The flaw in this reasoning is that here मित्रः

- (A) is the worshipper, and नमः is the friend being saluted
- (B) is in the nominative and therefore the subject who bows
- (C) is one of the Sun's twelve names, so the single dative addressee is the Sun itself, not a separate human friend
- (D) is a compound that already contains both the friend and the Sun

4. From सविता, पूषा, मित्रः, भानुः, अर्कः one word inflects differently from the rest in the nominative singular. The genuinely odd form by declension (not by meaning) is:

- | | |
|------------|-----------|
| (A) मित्रः | (B) पूषा |
| (C) भानुः | (D) अर्कः |

5. The chapter pairs twelve postures, twelve Sun-names and twelve months. A student concludes the Sun literally owns twelve different bodies. The intended meaning is rather that:

- (A) there are twelve separate suns, each ruling one month and one posture
- (B) one Sun is addressed by twelve equivalent names, one per posture, echoing the year's twelve months as a single yearly discipline
- (C) the twelve names are twelve different deities only loosely linked to the Sun
- (D) the months were renamed after the postures, and the Sun has no fixed identity

6. नमः सूर्याय, नमः चन्द्राय, नमः गुरवे — a pupil writes these by analogy. Which form, if any, is grammatically WRONG?

- (A) नमः चन्द्राय, because चन्द्र is not a Sun-name
- (B) नमः गुरवे, because गुरु should take -आय like सूर्य
- (C) नमः सूर्याय, because सूर्य must stay nominative after नमः
- (D) none — all three correctly place the saluted word in the dative

7. Expanding the compound सूर्यनमस्कारः into two words gives सूर्याय नमस्कारः. The reason सूर्याय is dative there is precisely that:

- (A) the first word of any expanded compound is automatically dative
- (B) नमस्कारः is itself dative and सूर्य merely copies its ending
- (C) नमस्कार, like नमः, governs the dative, so the Sun-word it salutes takes -आय
- (D) the compound's lost ending was a dative, so it reappears on the first word

8. A reader insists सूर्याय नमस्कारः and सूर्यनमस्कारः are 'exactly the same string of sounds, just spaced differently'. The accurate correction is that they differ because:

- (A) the compound inserts an extra vowel that the phrase lacks
- (B) the phrase is plural and the compound is singular
- (C) only the order of the two members is reversed in the compound
- (D) the two-word phrase keeps सूर्य's dative -आय, while the compound drops that ending, fusing to सूर्य-नमस्कारः

9. A student writes the compound as सूर्यायनमस्कारः, preserving सूर्य's dative ending inside it. Apart from being a single error, naming the rule he broke, the correct compound and rule are:

- (A) सूर्यायनमस्कारः is in fact correct; compounds keep every member's ending
- (B) सूर्येणनमस्कारः — the first member should switch to the instrumental inside a compound
- (C) सूर्यनमस्कारः — in a समास the prior member surrenders its vibhakti (case ending)
- (D) सूर्यःनमस्कारः — the first member should keep its nominative visarga

10. स्वस्थम् is glossed नीरोगम्. नीरोगम् itself analyses as निः + रोग. The most defensible literal sense of नीरोग is therefore:

- (A) 'full of disease' — निः here intensifies रोग
- (B) 'standing in a posture' — रोग means a yoga stance
- (C) 'out-of / free-from disease' — the निः prefix negates रोग (disease)
- (D) 'self-abiding' — नीरोग is just a spelling of स्वस्थ

11. The four fruits — स्वस्थं शरीरम्, वीर्यम्, तेजः, प्रज्ञा — span distinct domains. The single fruit that belongs to the COGNITIVE/mental domain rather than the bodily-energetic one is:

- (A) प्रज्ञा
- (B) वीर्यम्
- (C) तेजः
- (D) स्वस्थं शरीरम्

12. A pupil renders तेजः and वीर्यम् as one and the same. The cleanest distinction the chapter supports is that:

- (A) तेजः is wealth and वीर्यम् is wisdom
- (B) तेजः is laziness overcome and वीर्यम् is fear overcome
- (C) तेजः is one's outward shining radiance, while वीर्यम् is one's inner active strength/vigour
- (D) they are exact synonyms differing only in spelling

13. Both शरीरम् and मनः take the SAME adjective form स्वस्थम् (स्वस्थं शरीरम्, स्वस्थं मनः). The grammatical reason is NOT that स्वस्थम् is invariable, but that:

- (A) स्वस्थम् never changes for any noun regardless of gender
- (B) मनः silently borrows the form that properly belongs to शरीरम्
- (C) both nouns are neuter singular, so the adjective agrees identically in neuter
- (D) the two phrases are secretly one neuter compound word

14. If स्वस्थम् (नीरोगम्) describes a healthy body, the most natural single word for a body that is the OPPOSITE — diseased — would be:

- (A) नीरोगम्
- (B) सारोगम् / रोगयुक्तम्
- (C) स्वस्थम्
- (D) प्रज्ञम्

15. Given आचार्या = a female teacher and आचार्यः = a male teacher, the नमः-salutation 'salutation to the female teacher' is correctly:

(A) आचार्यायै नमः

(B) आचार्याय नमः

(C) आचार्या नमः

(D) आचार्याम् नमः

16. An editor changes every आचार्या in the dialogue to आचार्यः. Beyond a spelling tweak, the single semantic consequence is that:

(A) the teacher becomes a group of teachers (B) the teacher is demoted to a student

(C) the dialogue turns into a list of mantras

(D) the teacher is now read as male instead of female

17. Using स्वाहा's dative government, the offering 'to Agni, svaha' (अग्नि being an इ-stem) is correctly:

(A) अग्नये स्वाहा

(B) अग्नाय स्वाहा

(C) अग्निः स्वाहा

(D) अग्निम् स्वाहा

18. By analogy with मित्राय नमः, the blessing 'well-being to the people' (प्रजा, a feminine आ-stem, plural) using स्वस्ति is correctly:

(A) स्वस्ति प्रजाभ्यः

(B) स्वस्ति प्रजाः

(C) स्वस्ति प्रजानाम्

(D) स्वस्ति प्रजाभिः

19. The dative singulars मित्राय, छात्राय, सूर्याय, देवाय all share -आय. The single principle this pattern teaches is that:

(A) any Sanskrit noun forms its dative by adding -आय

(B) -आय marks the dative only for Sun-names specifically

(C) masculine अ-stem nouns form the dative singular by adding -आय to the stem

(D) -आय is the genitive ending, not the dative

20. A pupil reasons: 'मित्राय ends in -आय; the verb आय means "come"; so मित्राय नमः says "come and bow".' The decisive flaw is that:

(A) -आय here is the dative case ending, not a verb; मित्राय simply means 'to the Sun'

(B) आय truly means 'come', so the reading is essentially right

(C) नमः, not मित्राय, is the word that means 'come'

(D) मित्राय is a verb meaning 'to bow down'

21. Identify the ONE statement that is wholly correct:

(A) नमः governs the nominative, so मित्रः follows it, and सूर्यनमस्कारः is two words

(B) नमः governs the dative, so मित्राय (-आय) follows it, and सूर्यनमस्कारः is a single compound

(C) नमः governs the dative, but सूर्यनमस्कारः is the two separate words सूर्याय नमस्कारः

(D) नमः governs the accusative मित्रम्, and सूर्यनमस्कारः is a compound

22. A student builds matched mantras for the उ-stem Sun-name भानु and the अ-stem आदित्य. The correctly cased pair is:

(A) भानुः नमः and आदित्यः नमः

(B) भानुम् नमः and आदित्यम् नमः

(C) भानवे नमः and आदित्याय नमः

(D) भानाय नमः and आदित्ये नमः

23. Which chain explains मित्राय नमः from premise to conclusion without error?

- (A) मित्राय is the subject acting → नमः is its verb → 'the friend bows'
- (B) मित्राय नमः is one compound → so it names a practice like सूर्यनमस्कारः
- (C) मित्र is the moon → मित्राय is instrumental 'by the moon' → 'worshipped by the moon'
- (D) नमः means 'salutation' and governs the dative → the Sun-name मित्र takes the dative मित्राय → so the phrase means 'salutation to the Sun (Mitra)'

24. In the phrase सूर्याय नमः, the case ending of सूर्याय answers a specific कारक question. That question is:

- (A) 'by whom is the salutation done?' — the agent (कर्ता)
- (B) 'from whom does it come?' — the source (अपादान)
- (C) 'whose salutation is it?' — the possessor (सम्बन्ध)
- (D) 'to/for whom is the salutation offered?' — the recipient (सम्प्रदान)

25. Three errors lurk in: 'नमः takes the nominative, मित्र is the moon, and सूर्यनमस्कारः is two words.' The fully corrected sentence is:

- (A) नमः takes the dative, मित्र is the moon, and सूर्यनमस्कारः is two words
- (B) नमः takes the dative (मित्राय), मित्र is a Sun-name, and सूर्यनमस्कारः is one compound
- (C) नमः takes the nominative, मित्र is a Sun-name, and सूर्यनमस्कारः is one compound
- (D) the original sentence is already fully correct

26. Why does the chapter drill the छात्र paradigm (छात्रः, छात्रम्, छात्रेण, छात्राय ...) BEFORE the mantras rather than after?

- (A) because छात्र is itself one of the Sun's twelve names
- (B) so the learner recognises -आय as the dative and grasps why मित्राय (not मित्रः) follows नमः
- (C) because the mantras are literally written using the word छात्र
- (D) because only छात्र, of all nouns, may be saluted with नमः

27. From the set आदित्यः, अर्कः, घटः, भानुः, the genuine odd-one-out by MEANING is:

- (A) घटः — it means 'pot', while the others are Sun-names
- (B) आदित्यः — it alone is feminine
- (C) अर्कः — it alone is a compound
- (D) भानुः — it alone means the moon

28. The deeper force of calling health स्वस्थ ('self-abiding'), beyond merely नीरोग, is that true health is:

- (A) never having to stand or move at all
- (B) being settled and at ease within oneself, not just the bare absence of disease
- (C) depending entirely on others for one's needs
- (D) being self-centred and indifferent to others

29. If a thirteenth posture were added to सूर्यनमस्कारः, the design's one-to-one logic would break because:

- (A) thirteen is a forbidden number in Sanskrit grammar
- (B) the Sun would instantly acquire a thirteenth name
- (C) there are exactly twelve Sun-names to pair with, leaving the extra posture with no name
- (D) the calendar would be forced to add a thirteenth month

30. Why does this chapter teach the dative case alongside the physical Sun Salutation rather than in a separate grammar lesson?

- (A) the postures literally cannot be performed without first reciting case endings
- (B) the very first mantra मित्राय नमः already uses a dative, so the grammar is needed to understand what is chanted
- (C) the dative is the only case Sanskrit possesses
- (D) grammar and exercise are unrelated and merely happen to share a page

31. Reasoning purely from compounding rules, 'salutation to Ravi' written as ONE compound word is:

- (A) रवयेनमस्कारः
- (B) रविःनमस्कारः
- (C) रवेःनमस्कारः
- (D) रविनमस्कारः

32. A pupil claims सूर्याय नमः and सूर्यनमस्कारः 'must refer to two different suns'. The correct response is:

- (A) both concern the same Sun; one is the ACT of saluting it, the other the NAME of the practice
- (B) yes — the first sun is real and the second imaginary
- (C) yes — the compound denotes many suns at once
- (D) no — both are simply ungrammatical and meaningless

33. The relationship among रविः, भानुः, आदित्यः, अर्कः, भास्करः is best labelled:

- (A) antonyms — words opposite in meaning
- (B) a single compound split into five fragments
- (C) five case-forms of one and the same word
- (D) एकार्थकशब्दाः — different words sharing one meaning (the Sun)

34. A summary says daily सूर्यनमस्कारः 'removes आलस्यम् (laziness) and grants four fruits'. The fruit most directly OPPOSED to आलस्यम् is:

- (A) प्रज्ञा (wisdom)
- (B) नीरोगम् (disease-free)
- (C) वीर्यम् (vigour)
- (D) नमः (salutation)

35. Match the three benefit-words to glosses. The fully CORRECT set is:

- (A) प्रज्ञा = vigour, तेजः = wisdom, वीर्यम् = radiance
- (B) प्रज्ञा = radiance, तेजः = vigour, वीर्यम् = wisdom
- (C) प्रज्ञा = wisdom, तेजः = vigour, वीर्यम् = radiance
- (D) प्रज्ञा = wisdom, तेजः = radiance, वीर्यम् = vigour

36. Which benefit-to-effect mapping is INCORRECT?

- (A) प्रज्ञा → makes one wise (B) तेजः → makes one sleepy and idle
(C) वीर्यम् → makes one vigorous (D) स्वस्थं शरीरम् → keeps the body healthy

37. A bright, energetic, glowing, illness-free pupil embodies, IN THIS ORDER, which four words?

- (A) प्रज्ञा, वीर्यम्, तेजः, स्वस्थं शरीरम् (B) वीर्यम्, प्रज्ञा, स्वस्थं शरीरम्, तेजः
(C) तेजः, स्वस्थं शरीरम्, प्रज्ञा, वीर्यम् (D) स्वस्थं शरीरम्, तेजः, वीर्यम्, प्रज्ञा

38. From the qualities वीर्यम्, तेजः, प्रज्ञा, धनम्, the ONE that the chapter does NOT list among the fruits of the practice is:

- (A) वीर्यम् (vigour) (B) धनम् (wealth)
(C) तेजः (radiance) (D) प्रज्ञा (wisdom)

39. A pupil renders मित्राय नमः as 'the friend bows to me'. The single biggest grammatical error is that he has:

- (A) treated the dative मित्राय as if it were the nominative subject doing the bowing
(B) correctly identified मित्र as the moon (C) mistaken नमः for a dative noun
(D) read नमः as a past-tense verb of bowing

40. The defining feature that makes सूर्यनमस्कारः a समास (compound) rather than a mere phrase is that:

- (A) two words fuse into one and the first member सूर्य drops its case ending
(B) the two words sit side by side with both endings fully kept
(C) it is a finite verb built from सूर्य and नमस्कार
(D) it forms a complete sentence with subject and predicate

41. Inside the compound सूर्यनमस्कारः, the final -ः belongs to:

- (A) the first member सूर्य, which keeps its own visarga
(B) the whole compound, carried by the last member नमस्कार — not to सूर्य
(C) both members independently at once
(D) a hidden verb concealed within the compound

42. Which single statement is the ONE fully correct pairing?

- (A) समास = two words deliberately kept separate
(B) चतुर्थी विभक्ति = the 'from' (source) case
(C) एकार्थकशब्दाः = words with one shared meaning (synonyms)
(D) आचार्या = a male teacher

43. The full सूर्यनमस्कारः is best summarised as:

- (A) a twelve-posture practice, each posture chanted with a Sun-name in the dative after नमः, bringing health, vigour, radiance and wisdom
(B) a single mantra repeated twelve times with no link to grammar

- (C) a moon-worship ritual that grants only wealth
- (D) a wise saying about pots and water

44. The educational idea behind joining physical postures to grammatically-meaningful mantras is that:

- (A) grammar should be kept strictly apart from any physical activity
- (B) body and language can be trained together, so health and learning grow side by side
- (C) movement makes the meaning of the words irrelevant
- (D) only the body matters and the mantras are decorative

45. Consider 'नमः गुरुवे' and 'नमः गुरुः'. The first is correct and the second wrong because:

- (A) गुरुः is dative and गुरुवे is nominative, so the labels are simply swapped
- (B) both are correct, the choice being only stylistic
- (C) गुरु must take -आय like सूर्य, so neither form is right
- (D) गुरु is an उ-stem whose dative is गुरुवे; गुरुः is the nominative, which नमः cannot govern

46. A learner over-generalises: 'Every dative singular ends in -आय.' A single counterexample from the Sun-names that refutes this is:

- (A) सूर्याय (dative of सूर्य)
- (B) देवाय (dative of देव)
- (C) छात्राय (dative of छात्र)
- (D) रवये (dative of the इ-stem रवि)

47. In सूर्यनमस्कारः the joining of सूर्य and नमस्कार produces no vowel change at the seam. But if one compounded महा + आत्मा, the seam आ + आ would yield, by sandhi:

- (A) महाआत्मा — the two आ vowels stay separate
- (B) महात्मा — आ + आ coalesce into a single long आ
- (C) महोत्मा — आ + आ become ओ
- (D) महैत्मा — आ + आ become ऐ

48. The mantra word रवये arises from रवि + the dative ending. The internal change of the इ-stem before the dative suffix is best described as:

- (A) इ lengthens to ई and the suffix -आय is added, giving रवीआय
- (B) इ is simply dropped and -आय attached, giving र्वआय
- (C) इ strengthens to its guṇa grade ए, then combines with the ending, giving रवये
- (D) इ stays unchanged and -ये is glued on, giving रविये

49. मित्र as a Sun-name and मित्र as 'a human friend' share spelling but differ in this chapter's intent. The cleanest way to state the relationship is:

- (A) the same word-form carries two senses; the chapter fixes the Sun-sense by context (नमः + the salutation setting)
- (B) they are spelt differently, मित्र (Sun) vs मित्रः (friend)
- (C) the friend-sense is wrong Sanskrit and does not exist
- (D) they are two unrelated words that only sound alike by accident

50. Translate into idiomatic Sanskrit: 'Salutation to the teacher (female).' Using the chapter's rules, the correct rendering is:

(A) आचार्याय नमः

(B) आचार्या नमः

(C) आचार्या नमः

(D) आचार्यायै नमः

51. A pupil writes चन्द्रमसे नमः for 'salutation to the moon'. Although the deity is wrong for THIS chapter, the GRAMMAR is:

(A) wrong — नमः may only govern Sun-names like मित्राय

(B) wrong — the moon must appear in the nominative चन्द्रमाः after नमः

(C) correct — चन्द्रमसे is a valid dative and नमः properly governs the dative, regardless of which body is named

(D) wrong — नमः governs the accusative, so चन्द्रमसम् is needed

52. The chapter's central theme, stated most fully, is that:

(A) learning the Sun Salutation together with the dative case teaches discipline of body and language and the all-round wellbeing it brings

(B) a fox fails to reach grapes and calls them sour

(C) the workings of banks and modern finance

(D) the different types and forms of government

53. Why is मित्रः नमः defective while मित्राय नमः is sound?

(A) मित्रः is a verb, and नमः needs a noun

(B) मित्रः is nominative, but नमः requires its addressee in the dative (मित्राय)

(C) मित्रः is plural, and नमः needs the singular

(D) both are equally fine; the difference is only style

54. Three Sun-names — सविता, पूषा, हिमालयः — are listed; one is an impostor. It is हिमालयः because:

(A) हिमालयः is the only feminine word among the three

(B) हिमालयः alone is a compound, the others are simple words

(C) हिमालयः means the moon, not a mountain

(D) हिमालयः names a mountain, whereas सविता and पूषा are genuine Sun-names

55. By the same नमः-rule used for मित्राय, write 'salutation to Pushan (पूषन्, an न्-stem with dative पूष्णे)'. The correct mantra is:

(A) पूष्णे नमः

(B) पूषाय नमः

(C) पूषा नमः

(D) पूषणम् नमः

56. A student writes सूर्याय नमस्कारः and सूर्यनमस्कारः and asks which is a 'thing' you can name and which is an 'act' you perform. The accurate answer is:

(A) the two-word phrase names the practice, and the compound states the act

(B) both equally name only the practice and never an act

(C) both equally state only the act and never name a thing

(D) the compound सूर्यनमस्कारः names the practice (a thing); the two-word सूर्याय नमस्कारः states the act of saluting the Sun

- 57.** Across मित्राय (अ-stem), स्वये (इ-stem) and गुरुवे (उ-stem), the unifying grammatical fact — despite three different endings — is that:
- (A) all three are the same case AND the same ending, just spelt loosely
 - (B) they are three different cases that merely look similar
 - (C) all three are dative singulars, the case नमः requires, with the ending varying by stem-class
 - (D) only मित्राय is truly dative; the other two are nominatives
- 58.** Final synthesis — which single sentence is entirely accurate about the chapter?
- (A) सूर्यनमस्कारः is two words, नमः takes the nominative, and the Sun has one name only
 - (B) सूर्यनमस्कारः is a moon ritual of twelve mantras that grants wealth and is unrelated to grammar
 - (C) सूर्यनमस्कारः is a single verb meaning 'to bow', with मित्र meaning a human friend
 - (D) सूर्यनमस्कारः is one compound naming a twelve-posture practice, each posture saluting the Sun by a dative-cased name after नमः, and it yields health, vigour, radiance and wisdom
- 59.** A pupil argues 'since नमः already means salutation, the dative मित्राय is redundant and मित्रम् (accusative, the object of an action) would be tidier'. The flaw is that:
- (A) नमः is a transitive verb, so the accusative मित्रम् is indeed the tidier choice
 - (B) नमः is an indeclinable that idiomatically demands the dative, not an action-verb taking an accusative object
 - (C) मित्राय and मित्रम् are interchangeable after नमः with no difference
 - (D) नमः actually governs the genitive मित्रस्य, so both proposals are wrong
- 60.** The chapter glosses the four fruits and also describes सूर्यनमस्कारः as removing आलस्यम् and भयम्. Mapping fruit to the fault it counters, the BEST pairing is:
- (A) वीर्यम् counters आलस्यम् (laziness) and तेजः counters भयम् (the dimming/timidity of fear)
 - (B) प्रज्ञा counters आलस्यम् and स्वस्थं शरीरम् counters भयम्
 - (C) तेजः counters आलस्यम् and वीर्यम् counters भयम्
 - (D) धनम् counters आलस्यम् and नमः counters भयम्

Solutions — Sanskrit (Class 7), Chapter 3: मित्राय नमः (Mitraya Namah) — Paper 4

Paper 4 — (progressively harder)

Marking: +4 correct, –1 wrong, 0 unattempted. Maximum marks **240**.

Answer Key

Q	Ans	Q	Ans	Q	Ans	Q	Ans	Q	Ans	Q	Ans
1	D	11	A	21	B	31	D	41	B	51	C
2	C	12	C	22	C	32	A	42	C	52	A
3	C	13	C	23	D	33	D	43	A	53	B
4	B	14	B	24	D	34	C	44	B	54	D
5	B	15	A	25	B	35	D	45	D	55	A
6	D	16	D	26	B	36	B	46	D	56	D
7	C	17	A	27	A	37	A	47	B	57	C
8	D	18	A	28	B	38	B	48	C	58	D
9	C	19	C	29	C	39	A	49	A	59	B
10	C	20	A	30	B	40	A	50	D	60	A

Answer-key distribution: A = 15, B = 15, C = 15, D = 15.

Worked Solutions

1. (D) These three are uninflecting particles; none is a verb, noun, or adjective. Their object lands in the dative purely by established usage, which is exactly why the case after them cannot be predicted from any verbal action.

2. (C) अ-stems take -आय, but रवि is an इ-stem whose dative singular is रवये. Mechanically copying the अ-stem ending, leaving the nominative, or inventing a hybrid ending all miss the stem-specific rule.

3. (C) In this chapter मित्र is a Surya-epithet; the phrase salutes one being (the Sun), not two. Reading it as a human friend, as a subject, or as a built-in compound all import meanings the chapter rules out.

4. (B) All five name the Sun, so meaning cannot separate them. But मित्रः, भानुः and अर्कः end in visarga in the nominative, whereas पूषा (an न्-stem, like राजा) shows a long आ with no visarga — the structurally distinct one.

5. (B) The triple twelve is a symbolic correspondence over a single Sun, weaving body, language and the year together. Multiplying the Sun into twelve beings or deities contradicts the एकार्थक (one-meaning) basis of the names.

6. (D) All three datives are correct: सूर्याय and चन्द्राय are अ-stem datives (-आय), and गुरुवे is the उ-stem dative (-वे). नमः cares only about case, not whether the noun names the Sun, so semantics is irrelevant here.

7. (C) नमस्कार shares नमः's dative government; that is why the expansion puts सूर्य in the dative. The case is dictated by नमस्कार's government, not by position, by copying, or by any 'recovered' compound ending.

8. (D) Compounding deletes the first member's case ending, so सूर्याय becomes plain सूर्य before नमस्कार. The difference is the lost -आय, not an inserted vowel, a number change, or reordering.

9. (C) The defining feature of a समास is that the non-final members shed their case endings, giving सूर्यनमस्कारः. Keeping -आय, switching to -एण, or keeping -ः all violate that single rule.

10. (C) निः is a privative prefix meaning 'free from', so नीरोग = free of रोग (disease). It does not intensify, does not mean a posture, and is a synonym-by-meaning of स्वस्थ but not a respelling of it.

11. (A) प्रज्ञा is wisdom/intelligence, the mental fruit. वीर्यम् (vigour) and तेजः (radiance) are bodily-energetic, and स्वस्थं शरीरम् is plainly physical.

12. (C) तेजः denotes radiant brilliance and वीर्यम् denotes potency/vigour — related but distinct. Neither means wealth or wisdom, and treating them as identical erases a deliberate fourfold spread.

13. (C) शरीरम् and मनः are both neuter singular, so a concord adjective shows the same neuter ending for each. The adjective is not frozen; मनः does not 'borrow'; and the two are separate phrases, not a compound.

14. (B) The negation of नीरोग (disease-free) is 'possessed of disease' — सारोग / रोगयुक्त. नीरोगम् and स्वस्थम् are the synonyms being negated, and प्रज्ञा relates to wisdom, not illness.

15. (A) The dative singular of the आ-stem feminine आचार्या is आचार्यायै. आचार्याय is the masculine अ-stem dative, आचार्या is nominative, and आचार्याम् is accusative — none is the feminine dative.

16. (D) The -आ vs -ः ending is exactly the feminine/masculine contrast, so the swap re-genders the teacher from female to male. Number, role and genre are untouched.

- 17. (A)** स्वाहा governs the dative; the इ-stem अग्नि has dative अग्नये. The अ-stem ending अनाय, the nominative अग्निः and the accusative अग्निम् are all wrong here.
- 18. (A)** स्वस्ति takes the dative; the dative plural of प्रजा is प्रजाभ्यः. प्रजाः is nominative, प्रजानाम् genitive and प्रजाभिः instrumental — none is the dative.
- 19. (C)** The shared -आय is the अ-stem masculine dative formant; it does not extend to इ/उ/feminine stems, is not restricted to Sun-names, and is not the genitive (-स्य).
- 20. (A)** The -आय is an inflectional dative suffix on a noun, with no verbal force. नमः means 'salutation', and मित्राय is the dative noun 'to the Sun' — no 'come' is present anywhere.
- 21. (B)** Both halves must be right: नमः takes the dative मित्राय, and सूर्यनमस्कारः is one fused समास. The other options each pair one true clause with one false one or get both wrong.
- 22. (C)** भानु is an उ-stem (dative भानवे) and आदित्य an अ-stem (dative आदित्याय). Nominatives, accusatives, or cross-applied endings all fail नमः's dative requirement.
- 23. (D)** The valid chain keeps नमः as a dative-governing particle and मित्र as a Sun-name in the dative. The others wrongly make मित्राय a subject/instrumental, treat the phrase as a compound, or call मित्र the moon.
- 24. (D)** The dative here marks सम्प्रदान, the recipient of the salutation, answering 'to whom?'. Agent (instrumental/nominative), source (ablative) and possessor (genitive) are different कारक relations.
- 25. (B)** All three must flip: dative (not nominative), Sun-name (not moon), and one compound (not two words). Any option that fixes only one or two of the three remains wrong.
- 26. (B)** Seeing छात्राय first makes -आय recognisable as the dative, preparing the learner for मित्राय in the mantra. छात्र is neither a Sun-name nor present in the mantras, and नमः salutes any noun, not only छात्र.
- 27. (A)** घट means 'pot' and breaks the Sun-name set. आदित्य is not feminine, अर्क is not a compound, and भानु means the Sun, not the moon — so those reasons are false.
- 28. (B)** स्व+स्थ = abiding in oneself, so health is inner steadiness and ease — richer than 'not ill'. It implies neither immobility, dependence, nor selfishness.
- 29. (C)** The scheme matches twelve postures to twelve names; a thirteenth posture has no name to take. Sanskrit forbids no number, the Sun gains no new name, and the calendar is unaffected.
- 30. (B)** The mantra's मित्राय is a live dative, so the case is taught to make the chant intelligible. Postures need no recitation first, the dative is not the only case, and the pairing

is purposeful, not coincidental.

31. (D) In a compound the first member drops its ending, so रवि (bare stem) + नमस्कार = रविनमस्कारः. Keeping the dative स्वये, the visarga रविः, or the genitive रवेः inside the compound is wrong.

32. (A) There is one Sun throughout: the phrase states the act of salutation, the compound names the twelve-posture practice. Neither multiplies suns, and both are perfectly grammatical.

33. (D) They are synonyms (एकार्थक) for the Sun. They are not opposites, not pieces of one compound, and not inflected forms of a single stem — each is an independent word.

34. (C) Laziness is overcome by वीर्यम्, active vigour. Wisdom and disease-freedom are unrelated to lethargy, and नमः is not a fruit at all.

35. (D) प्रज्ञा is wisdom, तेजः is radiance, वीर्यम् is vigour. The other triplets shuffle these glosses incorrectly, notably swapping तेजः (radiance) and वीर्यम् (vigour).

36. (B) तेजः is radiance/brilliance, the very opposite of sleepiness and idleness, so that mapping is false. The other three correctly link wisdom, vigour and bodily health.

37. (A) Bright→प्रज्ञा, energetic→वीर्यम्, glowing→तेजः, illness-free→स्वस्थं शरीरम्. Only this ordering matches each adjective to its proper fruit.

38. (B) The chapter's fruits are health, vigour, radiance and wisdom — not wealth. धनम् is the intruder; the other three are genuine fruits.

39. (A) मित्राय is dative (the one saluted), not the subject; the pupil wrongly made it the agent. The moon reading and the parsing of नमः are secondary to this case-role inversion.

40. (A) A compound is a single fused word whose prior member loses its ending. Keeping both endings makes a phrase; नमस्कार is no verb; and the compound is a noun, not a sentence.

41. (B) The compound inflects as a single word through its final member, so -ः sits on नमस्कार for the whole. सूर्य has already shed its ending, there is no double inflection, and no verb is hidden inside.

42. (C) एकार्थकशब्दाः are synonyms. A समास fuses words (not keeps them apart), चतुर्थी is the 'to/for' (dative) case (not 'from'), and आचार्या is female — so those three are mismatched.

43. (A) It is twelve postures, each with a dative Sun-name mantra, yielding the four fruits. It is not one repeated mantra, not moon-worship for wealth, and not a proverb about pots.

44. (B) The chapter integrates movement with meaning so wellbeing and learning advance jointly. It does not separate them, dismiss the words, or treat the mantras as mere decoration.

45. (D) नमः needs a dative; the उ-stem गुरु gives गुरवे, while गुरुः is nominative and so ungrammatical after नमः. The labels are not swapped, the choice is not stylistic, and उ-stems do not take -आय.

46. (D) स्वये shows an इ-stem dative in -ये, breaking the -आय rule. सूर्याय, देवाय and छात्राय are all अ-stems that do end in -आय, so they confirm rather than refute the over-generalisation.

47. (B) Two like long vowels (आ + आ) merge into one long आ, giving महात्मा. They neither stay separate, nor turn into औ (that is अ/आ + उ/ऊ), nor into ऐ (that is अ/आ + ए/ऐ).

48. (C) The इ-stem takes guṇa (इ→ए) before the dative, producing स्वये. It is not merely lengthened with -आय, not deleted, and not left bare with -ये pasted on.

49. (A) One identical word carries both meanings; the salutation context selects the Sun-sense. The spellings are not different, the friend-sense is valid Sanskrit elsewhere, and they are the same word, not chance homophones.

50. (D) Female आचार्या is an आ-stem with dative आचार्यायै, and नमः requires that dative. आचार्याय is the masculine dative, आचार्या is nominative, and आचार्या is accusative.

51. (C) नमः governs the dative for any addressee, so a dative moon-word is grammatically fine even though the chapter is about the Sun. नमः is not limited to Sun-names, and it never takes the nominative or accusative.

52. (A) The chapter integrates the Sun Salutation, the dative, and the resulting wellbeing. The other options are themes of entirely different lessons.

53. (B) नमः demands the dative, so the nominative मित्रः cannot stand with it; मित्राय fixes the case. मित्रः is neither a verb nor plural, and the two are not stylistic variants.

54. (D) हिमालय is the Himalaya mountain, not the Sun, so it does not belong with the Sun-names सविता and पूषा. It is not feminine, its 'odd' status is semantic not compound-based, and it means the mountain, not the moon.

55. (A) The न्-stem पूषन् has the irregular dative पूष्णे, and नमः requires that dative. The अ-stem-style पूषाय, the nominative पूषा and the accusative पूषणम् are all wrong.

56. (D) The fused compound functions as a noun naming the practice, while the phrase expresses the act 'salutation to the Sun'. The roles are not reversed, and the two forms are not interchangeable in function.

57. (C) All three are datives selected by नमः; the endings (-आय, -ये, -वे) differ only because the stems differ. The endings are genuinely different, not loose spelling; they are one case, not three; and all three are real datives.

58. (D) The accurate synthesis combines: one compound, twelve postures, dative Sun-names after नमः, and the four fruits. Each distractor embeds clear errors — wrong word-count/case, a moon-wealth ritual, or a verb-and-friend misreading.

59. (B) नमः is a fixed particle whose addressee stands in the dative by idiom; there is no verbal action to take an accusative object. So मित्रम् is wrong, the two forms are not interchangeable, and नमः does not govern the genitive either.

60. (A) Vigour (वीर्यम्) is the natural opposite of laziness, and radiant brilliance (तेजः) dispels the shrinking of fear. The other pairings mismatch the fruits, or invoke धनम् and नमः, which are not fruits at all.
