

Olympiad Test Paper — Sanskrit (Class 7) — Paper 5

Chapter 4: न लभ्यते चेत् आम्लं द्राक्षाफलम् (The Fox and the Grapes)

Paper 5 — (progressively harder)

Subject	Sanskrit (NCERT Class 7, Deepakam)
Chapter	4 — न लभ्यते चेत् आम्लं द्राक्षाफलम् (The Fox and the Grapes)
Total Questions	60 (Multiple Choice, single correct)
Maximum Marks	240
Suggested Time	90 minutes

Marking scheme: +4 for each correct answer · -1 for each wrong answer · 0 if unattempted.

Instructions: Each question has four options (A), (B), (C), (D); exactly one is correct. Paper-5 traps fuse multiple systems at once: the passive न लभ्यते (agent-suppressing लभ्) reinforces the same evasion as the verdict आम्लम्, so a 'grammar' choice silently encodes a 'moral' error; उत्/उद् is one उपसर्ग ('up') riding on present उत्पतति AND future उत्पतिष्यति, never a tense-marker (tense lives only in the augment अ- of उदपतत् or the -ष्य- of the future); उत्+अ→उद is voicing sandhi, distinct from आम्लम्→आम्लं which is म्→anusvāra; आम्ल must agree in GENDER with whatever it judges (neuter फलम्→आम्लम्, feminine लता→आम्ला); -तः (तसिल्) builds indeclinable direction ADVERBS in fixed opposite pairs, not noun cases; पिपासा(←पा)/बुभुक्षा(←भुज्) are reduplicated DESIDERATIVES naming the action wished, while श्रान्त/खिन्न name finished STATES (body vs mind); and the moral indicts only the dishonest re-labelling step, never the striving. Do not write on this paper — mark answers on your answer sheet.

1. A grammarian observes that BOTH the passive verb न लभ्यते and the adjective आम्लम् serve the fox's wounded pride, but in grammatically opposite directions. Which statement names that contrast exactly?

- (A) Both forms suppress the agent: न लभ्यते hides the fox and आम्लम् also hides the fox, so the two are simply repetitions of the same passive device.
- (B) न लभ्यते names the fox explicitly as agent while आम्लम् hides him, so the two pull in genuinely opposite moral directions and cancel out.

(C) न लभ्यते suppresses the AGENT (it never says who failed), while आम्लम् inserts a false PREDICATE onto the object — one hides the fox, the other smears the grapes, yet both deflect blame from the fox's own inadequacy.

(D) न लभ्यते is an active verb that names the grapes as doer, while आम्लम् is a passive that names the fox, reversing subject and object.

2. Rewrite the punchline so the fox is the explicit grammatical subject AND the sense is preserved: शृगालः द्राक्षाफलं न _____. Choose the verb that keeps the SAME root meaning ('obtain') that the passive लभ्यते was built on.

(A) खादति ('the fox does not eat the grape-fruit') — since failing to get is the same as failing to eat

(B) लभ्यते ('the fox is not obtained') — keeping the same word makes the rewrite most faithful

(C) लभते (active of लभ्, 'the fox does not obtain the grape-fruit')

(D) पश्यति ('the fox does not see the grape-fruit') — since he could not reach it

3. Why does the agent-suppressing passive न लभ्यते make the maxim FEEL more universal than an active 'the fox does not get it' would?

(A) Because the passive changes the tense to a timeless past, and past events are automatically universal.

(B) Because the passive turns द्राक्षाफलम् into a plural, covering all fruit everywhere.

(C) By naming no particular failer, the agentless passive lets any reader slot themselves into the empty agent-slot — the failure becomes 'whoever does not obtain it', so the excuse reads as a pattern of all minds rather than one fox's lapse.

(D) Because the passive names the fox so precisely that readers admire his honesty and generalise his virtue.

4. A student claims: 'Since लभ्यते is passive, द्राक्षाफलम् must be in the instrumental case as the agent.' Diagnose the error.

(A) Correct — in any passive the object always becomes instrumental, so द्राक्षाफलम् is instrumental.

(B) In a passive, the THING obtained (द्राक्षाफलम्) is the grammatical SUBJECT in the nominative, while it is the AGENT (here the unstated fox) that would take the instrumental — the student has swapped the roles of subject and agent.

(C) द्राक्षाफलम् is in the dative, because passives put their objects in the dative of advantage.

(D) There is no case at all on द्राक्षाफलम्, because passive verbs take no nouns.

5. Compare two retellings: (i) न लभ्यते चेत् आम्लं द्राक्षाफलम् and (ii) शृगालेण द्राक्षाफलं न लभ्यते. Both are passive. What does adding शृगालेण in (ii) cost the fable?

(A) Adding शृगालेण turns the sentence active, so it now praises the fox for trying.

(B) Adding शृगालेण changes आम्लम् to feminine आम्ला to agree with the new agent.

(C) Adding शृगालेण makes द्राक्षाफलम् the agent and the fox the object, reversing the whole story.

(D) Naming the agent शृगालेण (instrumental) re-attaches the failure to the fox, undoing the evasive anonymity the original passive achieves — the excuse can no longer hide whose failure it covers.

6. Which single sentence below is BOTH grammatically passive AND preserves the fable's evasive, agentless effect?

- (A) शृगालः द्राक्षाफलं न लभते ('the fox does not obtain the grape-fruit') — active, naming the fox.
- (B) द्राक्षाफलं न लभ्यते ('the grape-fruit is not obtained') — passive, with no agent expressed.
- (C) शृगालेण द्राक्षाफलं न लभ्यते ('the grape-fruit is not obtained by the fox') — passive but the agent is named.
- (D) द्राक्षाफलं शृगालं न लभते ('the grape-fruit does not obtain the fox') — passive with reversed roles.

7. In न लभ्यते, the verb is singular. If the fox judged MANY clusters at once and we kept the passive, the verb would become न लभ्यन्ते. Which agreement principle drives this, and what stays the agent?

- (A) The verb agrees with the suppressed fox, so it is plural only if there are many foxes.
- (B) Passive verbs never change number, so न लभ्यन्ते is simply an error for न लभ्यते.
- (C) The number is fixed by the adjective आम्लम्, which controls the verb's ending.
- (D) The passive verb agrees in number with its NOMINATIVE subject (the patient): a plural patient → plural लभ्यन्ते; the agent (the suppressed fox) remains unexpressed and would still be instrumental, unaffected by the patient's number.

8. The title joins a condition (न लभ्यते चेत्) to a verdict (आम्लं द्राक्षाफलम्). A logician notes the verdict does NOT follow from the condition in reality. What kind of statement does the fox therefore utter?

- (A) A non-sequitur dressed as a conditional: 'not obtained' has no real bearing on a fruit's taste, so the 'IF...THEN' merely manufactures a pretext rather than stating a genuine cause.
- (B) A valid scientific law, since unreachable fruit really does turn sour over time.
- (C) A simple factual report that the grapes were tasted and found sour.
- (D) An honest confession that the fox failed and is sad about it.

9. A reviser replaces चेत् with यदि and adds a correlative. Which version is well-formed Sanskrit AND keeps चेत्'s normal clause-internal placement habit in mind?

- (A) यदि चेत् द्राक्षाफलं न लभ्यते आम्लम् — using both यदि and चेत् together to strengthen the 'if'.
- (B) यदि द्राक्षाफलं न लभ्यते तर्हि (तत्) आम्लम् — यदि fronts the IF-clause and तर्हि introduces the THEN, whereas चेत् typically sits inside the clause after a word.

(C) द्राक्षाफलं यदि न आम्लम् लभ्यते — placing यदि where चेत् sat, since यदि must always follow a word like चेत्.

(D) आम्लं तर्हि द्राक्षाफलं यदि न लभ्यते — putting the THEN-clause first and the यदि last for emphasis.

10. Strip the conditional entirely: a fox simply states द्राक्षाफलम् आम्लम् ('the grape-fruit is sour'), with no चेत्. How does removing the condition change the moral exposure?

(A) Nothing changes; the moral lives entirely in the word आम्लम् regardless of any condition.

(B) The fox now sounds more dishonest, because dropping चेत् proves he never tried.

(C) It strengthens the moral, since a bare assertion is always a worse lie than a conditional one.

(D) Without 'if not obtained', the link between failure and the verdict disappears, so the statement reads as a plain taste-claim — the sour-grapes RATIONALISATION (judging because one failed) is exactly what the चेत्-clause makes visible.

11. Two friends argue over चेत्. One says 'चेत् means therefore'; the other says 'चेत् means and'. From the fable's logic, the correct reading is:

(A) Neither — चेत् means 'if', introducing the condition ('IF not obtained'), on which the verdict is made to hang.

(B) 'therefore' — चेत् draws the conclusion that the grapes are sour.

(C) 'and' — चेत् simply joins 'not obtained' with 'sour' as two facts.

(D) 'not' — चेत् is a second negative reinforcing the न.

12. उत्पतति, उदपतत्, उत्पतिष्यति share the root पत्. A student proposes a rule: 'the more material before पत्, the later the tense.' Test it against the three forms.

(A) The rule holds: उत्पतिष्यति has the most material, so it is the latest (future), proving bulk tracks tense.

(B) The rule half-holds: more material means past, so उदपतत् with उद is the future.

(C) The rule fails: tense is not measured by bulk before the root — present उत्पतति and future उत्पतिष्यति both carry उत् (a meaning-prefix), while only the past उदपतत् carries the augment अ-; tense lives in specific markers (augment अ- for past, -ष्य- for future), not in length.

(D) The rule holds because उत् itself is a tense-marker that grows heavier with later tenses.

13. Identify the ONE morpheme that genuinely distinguishes the FUTURE उत्पतिष्यति from the present उत्पतति, holding everything else constant.

(A) The prefix उत्, which appears only in the future and marks futurity.

(B) The future-marker -ष्य- inserted between the root and the ending (पति-ष्य-ति) — the prefix उत् and the personal ending -ति are common to both.

(C) The augment अ-, which the future adds to the present form.

(D) The personal ending -ति, which is future in उत्पतिष्यति but present in उत्पतति.

14. A learner sees उद्गच्छति 'goes up' and उत्पतति 'leaps up' and concludes 'उत्/उद् is a marker meaning the verb is intransitive.' What is the precise correction?

- (A) Correct — उत्/उद् always makes a verb intransitive by removing its object.
- (B) उत्/उद् is a tense-marker, so both उद्गच्छति and उत्पतति are actually past.
- (C) उत्/उद् is a case ending attached to the verb, showing the subject's direction.
- (D) उत्/उद् is an उपसर्ग lending the spatial sense 'up/upward'; it is unrelated to transitivity — it can ride on many roots (गम् 'go', पत् 'fall/fly') adding direction, while transitivity is a property of the root and its construction.

15. Order these by the time-line they place an action on: पततु, उत्पतिष्यति, उदपतत्, उत्पतति — and say which one lies OFF the time-line.

- (A) Past उदपतत् → present उत्पतति → future उत्पतिष्यति form the time-line; पततु (imperative, 'let him leap') is a command and lies OFF the past–present–future axis.
- (B) पततु past → उदपतत् present → उत्पतति future, with उत्पतिष्यति being the off-axis imperative.
- (C) उत्पतिष्यति past → उत्पतति present → उदपतत् future, with पततु the imperative on the axis.
- (D) All four sit on the time-line in the order उदपतत्, पततु, उत्पतति, उत्पतिष्यति.

16. The fox 'leaps up' repeatedly in the present narration (उत्पतति). If a narrator retold the whole episode as a finished past event, which single verb-change is required, and what triggers it?

- (A) उत्पतति → उत्पतिष्यति, triggered by adding the -ष्य- future sign to mark completed action.
- (B) उत्पतति → पततु, triggered by dropping the prefix to show the action is over.
- (C) उत्पतति → उदपतत्, triggered by inserting the past augment अ- after the prefix (उत्+अ+पतत्), with उत्+अ undergoing voicing sandhi to उद्.
- (D) उत्पतति → उत्पतत्, triggered by simply removing the final -ति to make it past.

17. Which statement about उत्पतति's प्रत्यय/उपसर्ग structure is the ONLY fully correct one?

- (A) उत् is the past augment, -ति is a present ending, so the form is an inconsistent past-present hybrid.
- (B) उत् is the root, पत् is the prefix, and -ति is a future ending.
- (C) उत् is an उपसर्ग, but -ति is the imperative ending, making उत्पतति a command 'leap up!'.
- (D) उत् is an उपसर्ग ('up') prefixed to the root पत्, and -ति is the present third-person ending; no past augment is present, so the form is present 'he leaps up'.

18. In उदपतत्, the surface उद्- arises from उत्+अ. Name the EXACT sandhi at work and contrast it with the sandhi in आम्लम् → आम्लं द्राक्षाफलम्.

- (A) Both are the same anusvāra rule turning a final consonant into ँ.
- (B) Both are voicing rules turning a voiceless sound into a voiced one.

(C) उत्+अ→उद् is anusvāra sandhi and आम्लम्→आम्लं is voicing sandhi — i.e. the labels are swapped.

(D) उत्+अ→उद् is voicing sandhi (voiceless त् → voiced द् before the vowel-augment); आम्लम्→आम्लं is anusvāra sandhi (final म् written as ँ before a following consonant) — two different processes.

19. A printer writes the title as आम्लम् द्राक्षाफलम् (full म् before द्). A grammarian corrects it to आम्लं द्राक्षाफलम्. Which principle, stated precisely, justifies the correction?

(A) A word-final म् standing before a following consonant is conventionally represented as anusvāra ँ; hence आम्लम् → आम्लं before द्राक्षाफलम्.

(B) A word-final म् must always be dropped before any consonant, so आम्लम् loses its म्.

(C) A word-final म् doubles to म् before a stop like द्, giving आम्लम्.

(D) A word-final म् changes to न् before every word, so it should read आम्लन् द्राक्षाफलम्.

20. Note the TWO म्-finals in 'आम्लं द्राक्षाफलम्': the first becomes ँ but the SECOND (...फलम्) stays म्. Explain the asymmetry.

(A) The asymmetry is random scribal habit; both could equally be म् or ँ.

(B) The first म् is neuter and becomes ँ, while the second म् is masculine and stays म्.

(C) Both should be ँ; printing the second as म् is simply an error.

(D) The first म् is followed by a consonant (द्) within the phrase, so it surfaces as anusvāra; the second म् is phrase-final (nothing follows), so it remains म्. Position relative to the next sound decides the form.

21. From the root पत् the past is उदपतत् (with उत्); from गम् the past 'went up' is उदगच्छत् (उत्+अ+गच्छत्). A learner predicts the past of उत्+स्था ('stand up') without any augment as 'उत्स्थात्'. Spot the flaw in that prediction.

(A) The prediction is correct, because स्था- never takes the augment अ-.

(B) The flaw is that the prefix उत् should be dropped in the past tense entirely.

(C) The learner forgot the past augment अ-: 'stood up' needs उत्+अ+(स्था-form), and उत्+अ voices to उद्, so an augment-less 'उत्स्थात्' is wrong on the same principle that makes the past उदपतत्, not उत्पतत्.

(D) The flaw is that the root स्था should change to पत् in the past.

22. द्राक्षालता and द्राक्षाफलम् both have द्राक्षा first, yet one names a PLANT and one names FRUIT. Which analysis of the second members and the head-noun in each is exactly right?

(A) The head is the first member द्राक्षा in both, so both compounds simply mean 'grape'.

(B) Both are तत्पुरुष compounds whose HEAD is the second member: लता ('creeper') heads द्राक्षालता → a (grape-)vine, a plant; फलम् ('fruit') heads द्राक्षाफलम् → the (grape-)fruit; द्राक्षा only qualifies the head in each.

(C) लता means 'fruit' and फलम् means 'creeper', so द्राक्षालता is the fruit and द्राक्षाफलम् the plant.

(D) Both are द्वन्द्व compounds meaning 'grape and creeper' / 'grape and fruit', with no head.

23. Give the genitive paraphrase (विग्रह) that exposes the relation inside द्राक्षाफलम्, and reject the wrong relations.

- (A) द्राक्षा च फलम् च — 'grape and fruit', a coordinate (द्वन्द्व) relation.
- (B) द्राक्षा एव फलम् — 'the grape is itself the fruit', an identity with no real relation.
- (C) द्राक्षायाः फलम् — 'the fruit OF the grape(-plant)', a genitive (sixth-case) तत्पुरुष relation between qualifier and head.
- (D) फलं द्राक्षां जनयति — 'the fruit produces a grape', a verbal cause relation.

24. If the fox were judging the climbing PLANT rather than its fruit, the title would read न लभ्यते चेत् आम्ला द्राक्षालता. Two changes from द्राक्षाफलम् are involved. Name BOTH precisely.

- (A) The judged noun changes (द्राक्षाफलम् neuter → द्राक्षालता feminine) AND the adjective changes its gender to agree (आम्लम् neuter → आम्ला feminine).
- (B) Only the noun changes (फलम् → लता); the adjective stays आम्लम् because adjectives never change for gender.
- (C) Only the adjective changes (आम्लम् → आम्ला); the noun द्राक्षाफलम् stays the same.
- (D) Both change tense: the noun and adjective both move from present to past.

25. द्राक्षा, द्राक्षाफलम्, द्राक्षालता are to be arranged by physical inclusiveness. Choose the row that orders them smallest → largest (single fruit → the fruit as edible produce → the whole plant).

- (A) द्राक्षालता (a single grape) → द्राक्षा (the fruit) → द्राक्षाफलम् (the whole vine).
- (B) द्राक्षाफलम् (a single grape) → द्राक्षालता (the cluster) → द्राक्षा (the whole vine).
- (C) द्राक्षा (the whole vine) → द्राक्षालता (the fruit) → द्राक्षाफलम् (a single grape).
- (D) द्राक्षा (a single grape) → द्राक्षाफलम् (the grape-fruit / the grapes as edible produce) → द्राक्षालता (the whole grape-vine).

26. Sanskrit fuses 'grape' + 'creeper' into one word द्राक्षालता where English keeps 'grape-vine' as two. A student over-generalises: 'so Sanskrit always needs fewer words than English.' Refute precisely.

- (A) Correct — every Sanskrit phrase compresses to a single word, so the count is always lower.
- (B) Compounding shows Sanskrit CAN package two ideas into one word here, but that is a structural option, not a law — many ideas still take several words (e.g. the very gloss पातुम् इच्छा 'wish to drink' uses two words), so 'always fewer' overgeneralises one device.
- (C) Wrong, because Sanskrit actually cannot form compounds and द्राक्षालता is two separate words.
- (D) Wrong, because English has no word for 'grape', forcing Sanskrit to invent द्राक्षा.

27. आम्लम् in the title is a predicate adjective. With द्राक्षाफलम् (neuter) it is आम्लम्; with द्राक्षालता (feminine) it would be आम्ला; with masculine रसः ('juice') it would be आम्लः. What single grammatical principle generates all three endings?

- (A) Sandhi: the ending changes only because of the sound that follows the adjective.
- (B) Adjective–noun agreement in gender (and number/case): the adjective आम्ल takes the ending matching its noun — neuter -म्, feminine -आ, masculine -ः.
- (C) Tense agreement: the adjective shifts ending to match the tense of the sentence's verb.
- (D) The तसिल् suffix: -तः variants attach to आम्ल to mark direction, producing the endings.

28. The grapes were presumably मधुर ('sweet'); the fox calls them आम्ल ('sour'). A student labels this 'hyperbole' (exaggeration). Pick the sharper rhetorical description and why.

- (A) Hyperbole is exactly right: he exaggerates how sour an already-sour fruit is.
- (B) It is a simile, comparing the grapes to something sour.
- (C) It is a factual measurement of the grapes' acidity that the fox carefully took.
- (D) It is dramatic IRONY / inversion: the fox asserts the very OPPOSITE of the likely truth (sweet→sour) to excuse himself — not mere exaggeration of a real quality, but a reversal of it.

29. Which sentence correctly uses आम्ल with a feminine noun, matching the gender rule that would apply to द्राक्षालता?

- (A) द्राक्षालता आम्लम् — feminine noun with neuter adjective, since आम्लम् is the only form of the word.
- (B) द्राक्षालता आम्ला (नास्ति) — feminine noun लता takes the feminine adjective आम्ला.
- (C) द्राक्षालता आम्लः — feminine noun with masculine adjective, because लता ends in -आ like masculines.
- (D) द्राक्षालता आम्लतः — feminine noun with a -तः form, since direction marks gender.

30. A maxim-collector wants the title's logic but judging the PLANT, in correct Sanskrit. Which rewrite is internally consistent in gender?

- (A) न लभ्यते चेत् आम्ला द्राक्षालता — feminine लता correctly takes feminine आम्ला.
- (B) न लभ्यते चेत् आम्लं द्राक्षालता — keeping neuter आम्लं with feminine लता.
- (C) न लभ्यते चेत् आम्लः द्राक्षाफलम् — masculine आम्लः with neuter फलम्.
- (D) न लभ्यते चेत् आम्ला द्राक्षाफलम् — feminine आम्ला with neuter फलम्.

31. वामतः, दक्षिणतः, अग्रतः, पृष्ठतः all end in -तः and never change their endings for case. What two-part statement about their word-class and behaviour is exactly correct?

- (A) They are INDECLINABLE (अव्यय) direction adverbs formed with तसिल् -तः — they do not inflect for case/number and they modify the action by telling WHERE.
- (B) They are declinable nouns in the locative case, inflecting for number like वने.
- (C) They are present-tense verbs meaning 'goes left/right/front/back'.
- (D) They are adjectives agreeing in gender with द्राक्षाफलम्, like आम्लम्.

32. Stand where the fox stands, facing the vine अग्रतः. A pebble is पृष्ठतः, a leaf वामतः, a twig दक्षिणतः. The fox now turns 180°. After turning, the vine is to his ____ and the pebble is

____.

(A) The vine is still अग्रतः (in front) and the pebble is still पृष्ठतः (behind) — turning does not change front/back.

(B) The vine is वामतः (on the left) and the pebble is दक्षिणतः (on the right).

(C) The vine is दक्षिणतः (on the right) and the pebble is वामतः (on the left).

(D) After a 180° turn the vine (originally अग्रतः) is now पृष्ठतः (behind), and the pebble (originally पृष्ठतः) is now अग्रतः (in front).

33. Facing the vine अग्रतः, the fox sees a stone दक्षिणतः (on his right). He now turns 90° to his LEFT (so what was on his left is now in front). After this quarter-turn, where is the vine, and where is the stone?

(A) The vine is now पृष्ठतः (behind) and the stone is अग्रतः (in front) — a left turn reverses front and back.

(B) The vine stays अग्रतः and the stone stays दक्षिणतः — a 90° turn changes nothing.

(C) The vine is now वामतः (on his left) and the stone is अग्रतः (in front).

(D) The vine, once अग्रतः (front), is now दक्षिणतः (on his right); the stone, once दक्षिणतः (right), is now पृष्ठतः (behind).

34. वामतः and वामम् both contain वाम. In the sentence शृगालः ____ अपश्यत् ('the fox looked ____'), which word fits and why?

(A) वामम् — its accusative ending makes it the adverb 'to the left' here.

(B) वामतः — an indeclinable adverb 'to the left' that modifies अपश्यत् (telling WHERE he looked); वामम् would be an inflected case-form behaving like a noun/object, not an adverb of direction.

(C) Either word works identically, since वामतः and वामम् are full synonyms.

(D) Neither — direction after a verb of seeing must use the dative वामाय.

35. Build the तसिल् direction adverb for 'on the right side' and pair it with its true opposite, justifying the pairing.

(A) दक्षिणतः ('on the right'); its opposite is पृष्ठतः ('behind'), pairing right with back.

(B) दक्षिणम् ('on the right'); its opposite is अग्रतः ('in front'), pairing right with front.

(C) दक्षिणतः ('on the right'); its opposite is वामतः ('on the left') — the left/right axis pairs वामतः↔दक्षिणतः.

(D) दक्षिणाय ('to the right', dative); its opposite is दक्षिणतः, since both name the right.

36. A guide commands: अग्रतः गच्छ, ततः वामतः पश्य, अन्ते पृष्ठतः आगच्छ. Translate the three direction-instructions in order.

(A) 'Go to the right, then look behind, finally come from the front.'

(B) 'Go in front (forward), then look to the left, finally come from behind.'

(C) 'Go behind, then look to the right, finally come to the left.'

(D) 'Go to the left, then look in front, finally come from the right.'

37. By analogy with वामतः, अग्रतः, predict the तसिल् adverb for 'on the eastern/front side' from पूर्व-, and state its category.

- (A) पूर्वाय — a dative form, since direction takes the dative.
- (B) पूर्वतः — an indeclinable direction adverb ('on/from the eastern side'), -तः attaching to the base पूर्व just as in वामतः.
- (C) पूर्वति — a present-tense verb 'it easts', parallel to उत्पतति.
- (D) पूर्वस्य — a genitive 'of the east', the standard direction form.

38. पिपासा and बुभुक्षा both show a doubled opening syllable (पि-पासा, बु-भुक्षा). A student claims this reduplication is the same device as the past augment अ- seen in उदपतत्. Distinguish them sharply.

- (A) They are the same: reduplication is just the augment अ- written twice for emphasis.
- (B) Reduplication marks the plural ('many thirsts'), while the augment marks the singular.
- (C) Reduplication in पिपासा/बुभुक्षा is the DESIDERATIVE marker (signalling 'wish to do the root's action'); the augment अ- in उदपतत् is a PAST-TENSE marker on a verb — different morphemes doing different jobs (desire vs past time).
- (D) Reduplication marks the future and the augment marks the present, so both are tense markers.

39. Coin a desiderative from गम् ('to go') on the पिपासा/बुभुक्षा model and state its meaning AND what it shares with पिपासा.

- (A) 'has already gone' — a past tense; it shares the past augment with पिपासा.
- (B) 'on the going side' — a -तः direction adverb; it shares the तसिल् suffix with पिपासा.
- (C) A 'wish/desire to go'; it shares the reduplicated desiderative SHAPE marking 'wish to perform the root's action', differing only in the root-action (going vs drinking).
- (D) 'two goings' — a plural; it shares the reduplication-as-plural with पिपासा.

40. Why can the ROOT alone decide 'thirst' vs 'hunger' in these desideratives, even before you see the rest of the form?

- (A) Because the desiderative names the very ACTION wished for, and the root encodes that action: पा 'drink' → wish-to-drink = thirst; भुज् 'eat' → wish-to-eat = hunger — so identifying the root fixes which desire is meant.
- (B) Because the root encodes how many times one is hungry or thirsty.
- (C) Because the root encodes the direction (left/right) of the desire.
- (D) Because the root encodes the tense, and the tense implies the feeling.

41. The chapter foregrounds पिपासा for the fox but not बुभुक्षा. A bold reader concludes 'therefore the fox had certainly just eaten and felt no hunger.' What is the disciplined response?

- (A) Correct: naming thirst logically proves the absence of hunger, since the two are opposites.
- (B) Correct: पिपासा and बुभुक्षा mean the same thing, so naming one rules out the other.

(C) Unjustified: choosing पिपासा only ASSERTS the wish to drink; it neither affirms nor denies hunger — the two words track separate desires, so silence about बुभुक्षा is not a claim that hunger is absent.

(D) Wrong, because पिपासा actually means hunger, so the fox was hungry, not thirsty.

42. Coin a desiderative-style 'wish' word from श्रु ('to hear'). It would mean 'wish to hear'. Which property would it SHARE with बुभुक्षा and which would DIFFER?

(A) Share: the exact root भुज्; Differ: only the tense.

(B) Share: the past-tense augment; Differ: the case ending.

(C) Share: the reduplicated desiderative formation marking 'wish to do the action'; Differ: the root-action (hearing vs eating), so the specific desire is different.

(D) Share: the तसिल् direction suffix; Differ: the gender.

43. श्रान्तः/क्लान्तः, खिन्नः, and पिपासायुक्तः describe the fox. Sort them by what KIND of state each names.

(A) श्रान्तः/क्लान्तः name BODILY fatigue; खिन्नः names a MENTAL state (dejection); पिपासायुक्तः names a BODILY appetite (thirst) — two bodily, one mental.

(B) All three name mental moods, differing only in intensity.

(C) All three name bodily appetites (hunger/thirst), differing only in which organ.

(D) खिन्नः is bodily fatigue, while श्रान्तः and पिपासायुक्तः are mental.

44. The suffix -युक्त in पिपासायुक्तः means 'joined with / possessed of'. Apply it: from बुभुक्षा ('hunger') the parallel word बुभुक्षायुक्तः means:

(A) 'one who has finished eating his fill' — since -युक्त marks completion.

(B) 'one joined with / full of hunger' — i.e. still hungry, wanting to eat (not one who has finished eating).

(C) 'one who has lost all hunger' — since -युक्त means 'free from'.

(D) 'one joined to the right side' — a direction sense from -युक्त.

45. A reviser wants the fox's opening description to include ONLY bodily states, dropping any mental one. From श्रान्तः, खिन्नः, पिपासायुक्तः, which goes, and what stays?

(A) Drop श्रान्तः, because fatigue is a mood of the mind, not the body.

(B) Drop पिपासायुक्तः, because thirst is purely emotional.

(C) Drop none, because all three are bodily states.

(D) Drop खिन्नः (mental dejection); keep श्रान्तः (bodily fatigue) and पिपासायुक्तः (bodily thirst).

46. Distinguish the meaning-TYPE of पिपासा from that of श्रान्तः, using the fox.

(A) Both name finished conditions, differing only in the body part involved.

(B) पिपासा names an ongoing DESIRE (the wish to drink, still unfulfilled); श्रान्तः names a resulting STATE/condition already arrived at (worn out) — a desire vs a finished condition.

(C) Both name unfulfilled desires, differing only in drink vs rest.

(D) पिपासा names a finished state and श्रान्तः names a desire — the reverse.

47. Two travellers: one collapsed after carrying loads uphill all day; another, after going waterless in heat, keeps eyeing the well. Assign the single best chapter-word to EACH, with reason.

(A) The load-carrier is पिपासायुक्तः and the waterless one is श्रान्तः.

(B) The collapsed load-carrier is श्रान्तः (bodily fatigue from exertion); the well-eyeing one is पिपासायुक्तः (filled with thirst, the wish to drink).

(C) Both are best called खिन्नः, since both are unhappy.

(D) Both are best called बुभुक्षायुक्तः, since both want something.

48. The fable insists the fox's FAULT lies not in the failed jumps but in the spoken verdict. Locate the moral fault on the abstract sequence: (1) desire goal → (2) strive → (3) fail → (4) re-label goal as worthless.

(A) At step (4): the dishonest RE-LABELLING of the goal after failing — downgrading it to excuse the failure — is the fault; steps 1–3 (wanting and striving even unsuccessfully) carry no blame.

(B) At step (2): striving at an unreachable goal is the foolishness the fable mocks.

(C) At step (1): wanting the goal at all is the original error.

(D) At every step equally, since the whole episode is one continuous mistake.

49. Two endings to the tale. Ending A: the fox sighs 'I couldn't reach them today' and leaves. Ending B: the fox sneers 'they're sour anyway.' Which ending escapes the fable's censure, and on what principle?

(A) Ending B escapes, because confidently dismissing the goal protects the fox's pride, which the fable rewards.

(B) Both escape, since any reaction to failure is acceptable in the fable.

(C) Neither escapes, because speaking aloud at all after failure is the fault.

(D) Ending A escapes: it is an HONEST admission of failure; the fable censures only the dishonest re-labelling (Ending B), not the failure itself.

50. Which real-life case is the SHARPEST match to the fox — requiring BOTH genuine prior effort AND a post-failure smear of the goal?

(A) A student who studies hard, is not selected for the team, and then declares the contest 'rigged and pointless'.

(B) A student who never studied, fails, and honestly admits he was unprepared.

(C) A student who fails but quietly resolves to prepare harder next time.

(D) A student who is selected and humbly thanks his coach.

51. Identify the statement that is NOT a faithful restatement of the moral.

(A) 'Never attempt anything that might be out of reach.'

(B) 'Do not belittle what you fail to obtain.'

(C) 'Be honest about a failure instead of inventing an excuse.'

(D) 'Wounded pride can tempt us to lie about what we could not get.'

52. Why does the fox's choosing to SPEAK the verdict (rather than walk off silently) sharpen the fable's point?

(A) Speaking proves the fox could actually have reached the grapes.

(B) Speaking shows the grapes were genuinely sour after all.

(C) Speaking it exposes an active need to JUSTIFY the failure — the rationalisation becomes overt; silent departure would have left only honest, unspoken failure with nothing to condemn.

(D) Speaking reveals he was never thirsty to begin with.

53. Restated as a general maxim ('IF not obtained, THEN sour') rather than 'these grapes are sour', the punchline gains what — and what does it NOT claim?

(A) It gains a true general law that unreachable fruit really does become sour.

(B) It gains a report that the fox finally ate the grapes after all.

(C) It gains GENERALITY (turning one fox's excuse into a recognisable universal pattern); it does NOT claim that all unreachable fruit is actually sour.

(D) It loses all meaning, since maxims about grapes apply only to grapes.

54. Synthesise grammar + narrative + moral. Which ONE statement is correct on EVERY count?

(A) A rested fox leapt up (उत्पतति, past), got the sweet (आम्लम्) grapes, and the moral praises his patience.

(B) A thirsty fox will fly away (उत्पतति, future); the vine on the left (आम्लम्) is the point, and the moral is about directions.

(C) A hungry fox sat down (उदपतत्, present), obtained the grape-vine, and the moral is to give up early.

(D) A tired (श्रान्तः) fox leaps up (उत्पतति, present) again and again, fails to obtain (न लभ्यते, passive) the grape-fruit (द्राक्षाफलम्), and dishonestly calls it sour (आम्लम्) — the moral being against such excuse-making.

55. A summary reads: 'The fox teaches us to give up quickly and then insult what we wanted.' Count the errors against the true moral.

(A) ZERO errors — the summary states the moral exactly.

(B) ONE error — 'give up quickly' is fine, only 'insult' is wrong.

(C) ONE error — 'insult' is fine, only 'give up quickly' is wrong.

(D) TWO errors: the moral is NOT 'give up quickly' (effort/striving is not faulted) AND NOT 'insult what we wanted' (it warns AGAINST that very insult) — both halves are wrong.

56. A 'translation' of the title runs: 'Because the grape-fruit was obtained, it is sour.' Pinpoint the SINGLE logical inversion that wrecks it.

(A) It reverses the condition: the original says sour IF NOT obtained, whereas this reads 'BECAUSE it WAS obtained' — flipping both the negation and the conditional into a (false) causal claim.

(B) It wrongly translates द्राक्षाफलम् as 'fox'. (C) It wrongly makes आम्लम् mean 'sweet'.

(D) It wrongly changes लभ्यते into a future tense.

57. A wiser fox, obeying the chapter's own lesson, would say which of these — and why is it the right one?

(A) 'These grapes are sour and worthless anyway.' — confidently dismissing the goal.

(B) 'The forest itself is to blame for my failure.' — shifting blame outward.

(C) 'I could not reach them today; perhaps another time.' — an honest acknowledgement of failure, which is exactly what the fable commends over excuse-making.

(D) 'I never wanted those grapes to begin with.' — denying the desire after the fact.

58. Combine three claims into one true statement: about उत्पत्ति's tense, पिपासा's root, and the moral.

(A) उत्पत्ति is present ('leaps up'), पिपासा comes from पा ('to drink'), and the moral is NOT to belittle what we fail to obtain.

(B) उत्पत्ति is past, पिपासा comes from भुज्, and the moral is to give up early.

(C) उत्पत्ति is present, पिपासा comes from भुज्, and the moral is to belittle failed goals.

(D) उत्पत्ति is future, पिपासा comes from पा, and the moral is about directions.

59. The title simultaneously encodes an OBJECT, a CONDITION, and a VERDICT. Map each phrase of न लभ्यते चेत् आम्लं द्राक्षाफलम् to its role.

(A) Object = the fox; Condition = if tired; Verdict = 'on the left'.

(B) Object = द्राक्षाफलम् (the grape-fruit); Condition = न लभ्यते चेत् (if not obtained); Verdict = आम्लम् (sour).

(C) Object = the vine; Condition = if jumped; Verdict = 'sweet'.

(D) Object = आम्लम् (the verdict); Condition = द्राक्षाफलम्; Verdict = न लभ्यते (if not obtained).

60. Final integrative judgement: which ONE statement is wrong on NO count — vocabulary, grammar, AND moral together?

(A) शृगालः (the fox) is श्रान्तः (tired); he उत्पत्ति (leaps up, present) for the द्राक्षाफलम् (grape-fruit) पुनः पुनः, न लभ्यते (it is not obtained, passive), and he calls it आम्लम् (sour, agreeing with neuter फलम्) — the moral condemning the excuse.

(B) शृगालः is खिन्नः meaning 'thirsty'; he उदपतत् (leaps up, present) and obtains the आम्ला द्राक्षाफलम् (sour, feminine), the moral praising persistence.

(C) लोमशा (the vine) is पिपासायुक्तः (full of hunger); it उत्पत्तिष्यति (leapt up, past) वामतः (on the right), and the moral is to give up.

(D) द्राक्षालता (a single grape) is आम्लः (sour, masculine); the fox न लभते (is not obtained, passive) it, and the moral warns against effort.

Solutions — Sanskrit (Class 7), Chapter 4: न लभ्यते चेत् आम्लं द्राक्षाफलम् (The Fox and the Grapes) — Paper 5

Paper 5 — (progressively harder)

Marking: +4 correct, –1 wrong, 0 unattempted. Maximum marks **240**.

Answer-key distribution: A = 15, B = 15, C = 15, D = 15.

Worked Solutions

1. (C) The passive लभ्यते ('is obtained') has no expressed agent — it states only that the fruit 'is not got', quietly omitting WHO failed to get it; that is agent-suppression. आम्लम् ('sour'), by contrast, is a predicate adjective actively ASCRIBED to the grapes — it adds a (false) property to the object. So both serve the same end (sparing the fox), but by opposite grammatical mechanisms: one deletes a participant, the other invents a quality. The idea that both merely 'repeat the same passive device' is wrong because आम्लम् is not a passive verb at all and does not suppress any agent — it predicates. The claim that न लभ्यते 'names the fox explicitly' contradicts the very nature of an agentless passive. And nothing here makes the grapes a grammatical doer or turns आम्लम् into a passive of the fox; that scrambles subject, object, and voice together.

2. (C) लभ्यते is the passive of the root लभ् 'to obtain/get'. To make the fox the explicit subject we need the ACTIVE of the same root: लभते. खादति ('eats') swaps in a different root

(खाद् 'eat') — failing to obtain is not the same act as failing to eat, and the original verdict is about obtaining, not tasting. Reusing लभ्यते is the trap: it is still passive, so शृगालः would be its grammatical SUBJECT of a passive ('the fox is not obtained'), which is nonsense — the fox is the would-be agent, not the thing got. पश्यति swaps in दृश् 'see', again a different root. Only लभते preserves both the root meaning and the active frame.

3. (C) An agentless passive leaves the doer-slot open; with no fox explicitly occupying it, the statement reads as 'IF (anything) is not obtained, (it is called) sour' — the reader can supply themselves as the implicit agent, which is exactly how a maxim generalises one anecdote into a rule about everyone. Tense is irrelevant: लभ्यते is present, not a 'timeless past', and tense does not create universality. The passive does not pluralise द्राक्षाफलम् (it stays singular neuter, taking singular आम्लम्). And the passive precisely does NOT name the fox — that is the whole point — so it cannot make readers 'admire his honesty'; the fox is dishonest, which is what the fable condemns.

4. (B) Sanskrit passive construction: the patient (the thing acted upon — here the grapes that 'are not obtained') becomes the NOMINATIVE subject and controls verb agreement, while the agent (the one doing the obtaining — the suppressed fox) goes into the INSTRUMENTAL. द्राक्षाफलम् is the patient, so it is nominative subject, not instrumental. The student has reversed the two roles. The 'always instrumental object' claim inverts the rule (it is the agent, not the patient, that is instrumental). Dative 'of advantage' is invented here. And passives certainly take nominal subjects — लभ्यते needs a subject for its singular ending to agree with.

5. (D) Even though (ii) stays passive, supplying the instrumental agent शृगालेण ('by the fox') fills the very slot the original deliberately left empty, so the reader is told exactly who failed — the evasive cover is gone. The sentence does NOT become active just because an agent is named (an instrumental agent is the hallmark of the passive, not the active). आम्लम् agrees with द्राक्षाफलम् (neuter), not with the agent, so it does not become आम्ला. And the agent शृगालेण does not make द्राक्षाफलम् the doer — द्राक्षाफलम् remains the nominative patient throughout.

6. (B) The evasive effect needs TWO features together: passive voice AND no expressed agent. द्राक्षाफलं न लभ्यते has both — लभ्यते is passive and no instrumental agent appears. The active शृगालः...लभते names the fox and is not passive, so it fails on both counts. शृगालेण...लभ्यते is passive but names the agent (शृगालेण), so the anonymity is lost. The last option is active (लभते, not लभ्यते) and also semantically absurd (grapes obtaining a fox), so it is neither passive nor evasive in the right way.

7. (D) In a Sanskrit passive the patient is the nominative SUBJECT and the verb agrees with IT in number; so a plural patient (many clusters) yields plural लभ्यन्ते. The agent (the fox) is suppressed and, if expressed, would be instrumental — its number does not govern the verb. So agreement is not with the fox (the agent never controls a passive verb's number). Passive verbs DO inflect for number (singular लभ्यते vs plural लभ्यन्ते), so न लभ्यन्ते is

correct, not an error. And an adjective like आम्लम् never controls a verb's ending — verb number comes from its nominative subject, not from a predicate adjective.

8. (A) The conditional form 'IF not obtained, THEN sour' implies the obtaining-or-not has some relevance to taste — but a grape's sourness has nothing to do with whether a fox reached it. So the consequent does not actually follow from the antecedent: it is a non-sequitur given a respectable IF...THEN shape, i.e. a pretext. It is no scientific law (unreachability does not chemically sour fruit). It cannot be a tasting report — the fox never tasted them (he could not reach them). And it is the opposite of an honest confession; the whole point is that it dodges honesty by inventing a reason.

9. (B) यदि characteristically FRONTS the conditional clause and is answered by a correlative तर्हि ('then') heading the main clause: यदि...न लभ्यते तर्हि आम्लम्. चेत्, by contrast, prefers to sit clause-internally after a word, which is why the original could place it as ...न लभ्यते चेत्. Stacking यदि चेत् together is redundant and not idiomatic — one 'if' word suffices. Forcing यदि to behave like चेत् (always post-posed) misstates यदि's habit. Putting the तर्हि-clause first with यदि stranded at the end garbles the standard fronted-यदि / correlative-तर्हि order.

10. (D) The fable's bite comes from the CONNECTION the चेत्-clause draws: the grapes are pronounced sour BECAUSE/IF they were not obtained. Remove that condition and you have only 'the grapes are sour' — a bare taste-claim that could in principle be honest; the diagnostic of rationalisation (downgrading a goal precisely because of failure) is gone. So the moral is NOT carried by आम्लम् alone — it needs the failure-condition to expose the motive. Dropping चेत् does not 'prove he never tried' (he tried पुनः पुनः). Nor is a bare assertion automatically a 'worse lie'; the conditional is what reveals the dishonest reasoning.

11. (A) चेत् is the conditional particle 'if'. The punchline is 'IF (it) is not obtained, (then) the grape-fruit is sour' — a condition, not a conclusion-word. 'Therefore' would make the sourness a logical consequence already established, which mis-reads the IF. 'And' would flatten the conditional into a mere list of two facts, losing the contingency that exposes the excuse. 'Not' is wrong because न already carries the negation; चेत् adds the 'if', not a second 'not'.

12. (C) Tense in Sanskrit is signalled by dedicated morphemes, not by how many letters precede the root: the past adds the augment अ- (giving उद-पतत् after sandhi), and the future inserts -ष्य- (उत्पति-ष्य-ति). The prefix उत् ('up') is shared by present उत्पतति AND future उत्पतिष्यति, so its presence cannot signal any tense. The 'bulk = later tense' coincidence (the future happens to be longest) is accidental: the present उत्पतति is longer than bare पतति yet is not 'later'. उद- in the past is the augment-driven form, not a future. And उत् is a meaning-prefix, never a tense-marker, so it does not 'grow heavier' across tenses.

13. (B) Lining up उत्-पत-ति (present) against उत्-पति-ष्य-ति (future), the only added element is -ष्य-, the future sign; the prefix उत् and the third-person ending -ति are identical in both. उत् is therefore NOT distinctive (it is in both, and it is a meaning-prefix, not a tense-sign). The augment अ- belongs to the PAST (उदपतत्), not the future. And -ति is the same primary present/future ending in both forms, so it cannot be what tells them apart.

14. (D) उत्/उद् is a directional prefix ('up'), the same element giving 'upward' sense to different roots (उद्-गम् 'go up', उत्-पत् 'spring up'). Transitivity has nothing to do with it — that depends on the root and whether it governs an object, not on a prefix. So 'always intransitive' is false. It is not a tense-marker (both उद्गच्छति and उत्पतति are present; the past would show the augment अ-). And it is certainly not a case ending — case endings attach to NOUNS, while उपसर्गs attach to verbal roots and modify meaning.

15. (A) Tense markers fix the time: augment अ- → past (उदपतत्), bare present endings → present (उत्पतति), -ष्य- → future (उत्पतिष्यति). The imperative पततु expresses a wish/command ('let him leap'), which is a MOOD, not a tense, so it does not occupy a point on the past–present–future line. The second and third options scramble the tense assignments (e.g. calling the future 'past'). The fourth wrongly puts the imperative पततु on the time-line; an imperative is off-axis by definition.

16. (C) Past narration needs the augment अ-, placed after the prefix and before the root: उत्+अ+पतत्. The cluster उत्+अ then undergoes voicing sandhi, the त् softening to द् before the vowel, yielding उदपतत्. The future sign -ष्य- (giving उत्पतिष्यति) marks future, not completed past. पततु is an imperative command, not a past narrative form, and dropping the prefix loses the 'up' sense. Merely lopping off -ति (उत्पतत्) does NOT supply the obligatory past augment, so it is not the correct past form.

17. (D) Correct parse: उपसर्ग उत् + root पत् + present ending -ति → present 'he leaps up'. उत् is NOT the past augment (the augment is अ-, which is absent here — its presence is what makes उदपतत् past). It is not the root (पत् is the root) nor a 'hybrid' tense. And -ति is the present indicative ending; the imperative third-singular would be -तु (पततु), so उत्पतति is a statement, not a command.

18. (D) उत्+अ→उद्: a voiceless त् becomes the voiced द् before the vowel अ — a voicing/assimilation change. आम्लम्→आम्लं द्राक्षाफलम्: a word-final म् before a following consonant is written as the nasal anusvāra ँ — a nasal-representation change, not voicing. So the two are distinct: voicing vs anusvāra. 'Both anusvāra' is wrong because उद् involves no nasal. 'Both voicing' is wrong because म्□□ voices nothing. The swapped-label option mislabels each.

19. (A) The rule: final म् before a consonant is written as anusvāra ँ (it is not lost, doubled, or turned to a fixed न्). So आम्लम् → आम्लं. Dropping म् entirely would remove the case ending; doubling to म्म् is not a Sanskrit rule for this environment; and a blanket म्→न्

'before every word' is false — ण् is not the general outcome (anusvāra is the standard pre-consonant representation).

20. (D) Anusvāra substitution for final ण् is conditioned by what follows: a following consonant triggers ँ, while phrase-final position (or a pause) leaves ण् intact. आम्लं precedes द्राक्षाफलम् (consonant द् follows) → ँ; द्राक्षाफलम् ends the phrase (no following sound) → stays ण्. It is rule-governed, not random. Gender is irrelevant to this purely phonological sandhi (both words here are even neuter). And the phrase-final ण् is correct as ण्, not an error.

21. (C) Every past form in this family needs the augment अ- after the prefix; उत्+अ then voices to उद् (just as in उदपतत्, उदगच्छत्). An augment-less form shows no augment, so it repeats the very mistake of writing उत्पतत् for the past — the augment is missing. स्था- does take the augment like other roots, so 'never takes अ-' is false. The prefix is NOT dropped in the past (उद्- is precisely the prefix-plus-augment fused). And roots do not swap to पत् — स्था stays स्था; only the augment and sandhi change.

22. (B) In these तत्पुरुष compounds the SECOND member is the head: लता (creeper/vine) makes द्राक्षालता a plant, फलम् (fruit) makes द्राक्षाफलम् the fruit, with द्राक्षा qualifying ('grape-') in each. So the head is the second, not the first member — 'both mean grape' is wrong. लता is 'creeper', फलम् is 'fruit' (not swapped). And these are not coordinating द्वन्द्व ('X and Y') compounds — द्राक्षालता is not 'grape and creeper' but a single thing, the grape-vine.

23. (C) The natural विग्रह is द्राक्षायाः फलम् 'the fruit of the grape(-vine)', a genitive तत्पुरुष — the standard relation for X-फलम् compounds. The coordinate paraphrase द्राक्षा च फलम् च would make it a द्वन्द्व ('grape and fruit'), but the compound denotes one thing, the fruit. The appositional 'the grape IS the fruit' (एव) erases the qualifier–head relation that the compound actually encodes. And 'the fruit produces a grape' reverses and verbalises the relation, which a nominal तत्पुरुष does not do.

24. (A) Swapping the object from fruit to plant changes a NEUTER noun (द्राक्षाफलम्) to a FEMININE noun (द्राक्षालता), and the predicate adjective must AGREE in gender, so आम्लम् (neuter) becomes आम्ला (feminine). Adjectives in Sanskrit DO inflect for the gender of their noun, so 'never change for gender' is false. The noun does change (फलम्→लता), so 'only the adjective' is incomplete. And 'tense' is irrelevant — neither word is a verb carrying tense; the variable is gender agreement.

25. (D) By inclusiveness: द्राक्षा is the single grape (smallest), द्राक्षाफलम् the grape-fruit/produce (the grapes the fox wants), and द्राक्षालता the entire climbing plant (largest, bearing everything). The other rows mislabel: द्राक्षालता is never 'a single grape' (it is the vine), द्राक्षाफलम् is never the smallest single grape (that is द्राक्षा), and द्राक्षा is never 'the whole vine' (that is लता). Only the first row keeps each word's true referent and the size ordering.

26. (B) द्राक्षालता illustrates that Sanskrit OFTEN compounds where English needs a hyphenated pair — an available device, not a universal. The chapter itself glosses thirst as पातुम् इच्छा ('wish to drink'), two words, showing Sanskrit does not always compress to one word. So 'always fewer' is an overgeneralisation. Sanskrit certainly CAN form compounds (द्राक्षालता is exactly one), so the second refutation is false. And English does have 'grape', so the third reason is fabricated.

27. (B) A Sanskrit adjective agrees with its noun in gender, number, and case; आम्ल therefore shows neuter -म् with फलम्, feminine -आ with लता, masculine -ः with रसः. This is concord, not sandhi (the changes track the noun's gender, not a following sound). It is not tense agreement — adjectives have no tense, and these endings have nothing to do with the verb's time. And the तसिल् -तः makes direction adverbs from direction-bases, utterly unrelated to आम्ल's gender endings.

28. (D) मधुर and आम्ल are opposites (sweet/sour). Saying 'sour' of presumably sweet grapes is not exaggerating an existing trait (hyperbole) but ASSERTING ITS OPPOSITE — an ironic inversion driven by self-justification. Hyperbole would require the grapes to be genuinely sour and the fox to overstate it; they were not. It is no simile (no comparison 'like X' is made). And it cannot be a factual measurement — the fox never tasted them, having failed to reach them; the verdict is invented.

29. (B) लता is feminine, so its predicate adjective must be feminine: आम्ला. आम्लम् is the NEUTER form (for फलम्), so it cannot agree with feminine लता. आम्लः is MASCULINE; लता's final -आ is the feminine ā-stem ending, not a masculine marker, so आम्लः disagrees. आम्लतः is not even an adjective form — -तः makes direction adverbs and has nothing to do with predicating sourness or with gender.

30. (A) If the judged noun is the feminine द्राक्षालता, the adjective must be feminine आम्ला — that pairing alone is consistent. आम्लं is neuter and clashes with feminine लता. आम्लः is masculine and clashes with neuter फलम्. आम्ला (feminine) with फलम् (neuter) also clashes. Gender must match between adjective and the noun it predicates, so only आम्ला + द्राक्षालता is correct.

31. (A) The तसिल् suffix -तः derives indeclinable (अव्यय) adverbs that fix a direction and never take case endings; they modify a verb by answering 'where/in which direction'. They are not declinable nouns (they do not inflect like the locative वने). They are not verbs (no tense, no person endings). And they are not gender-agreeing adjectives like आम्लम् — they are unchanging regardless of any noun's gender.

32. (D) These adverbs are relative to the facer's orientation. A 180° turn swaps front and back: what was अग्रतः (the vine, in front) becomes पृष्ठतः (behind), and what was पृष्ठतः (the pebble, behind) becomes अग्रतः (in front). Turning certainly DOES change front/back (so 'still in front' is wrong). A 180° turn swaps front↔back, not front↔side, so वामतः/दक्षिणतः

(left/right) are not where the vine and pebble land — those would shift in a 90° turn, not a 180°. Hence vine→पृष्ठतः, pebble→अग्रतः.

33. (D) Turning 90° to the left rotates every bearing one quarter clockwise relative to the fox: front→right, right→behind, behind→left, left→front. So the vine (front) moves to his right (दक्षिणतः) and the stone (right) moves to behind (पृष्ठतः). A left quarter-turn does NOT reverse front and back (that is a 180° turn), so vine→behind/stone→front is wrong. A 90° turn certainly DOES change bearings (so 'nothing changes' is false). And the vine cannot land on his left: turning the body left brings what was on the left to the FRONT, not the front to the left — so vine→वामतः misapplies the rotation direction.

34. (B) To say 'looked to the left' you need the direction ADVERB वामतः, which modifies the verb अपश्यत्. वामम् is an inflected case-form (e.g. accusative of वाम) and would function as a noun/object ('a left thing'), not as the manner/place adverb the slot wants. The two are NOT synonyms — one is an indeclinable adverb, the other a declinable case-form. And there is no rule forcing a dative वामाय after 'see'; direction is expressed by the तसिल् adverb, not a dative.

35. (C) दक्षिण → दक्षिणतः 'on the right'; the natural opposite on the same (left–right) axis is वामतः 'on the left'. पृष्ठतः ('behind') lies on the front–back axis, so right↔behind crosses axes incorrectly. दक्षिणम् is a case-form, not the तसिल् adverb, and front (अग्रतः) is again the wrong axis. दक्षिणाय is a dative, not a direction adverb, and pairing it with दक्षिणतः pairs a word with itself, not its opposite. Only वामतः↔दक्षिणतः is the correct same-axis antonym pair.

36. (B) अग्रतः = in front/forward; वामतः = to the left; पृष्ठतः = behind. So the commands read 'go forward, then look left, finally come from behind.' The other renderings swap the adverbs: 'right' is दक्षिणतः (not अग्रतः), 'behind' is पृष्ठतः (not वामतः), etc. Mapping each -तः word to its fixed direction yields only the first translation.

37. (B) The तसिल् pattern attaches -तः to a directional base to make an indeclinable adverb: वामतः, अग्रतः, and likewise पूर्व → पूर्वतः 'on the eastern side'. A dative पूर्वाय would mis-apply a case ending where the adverbial -तः belongs. पूर्वति treats a direction base as a verb root with a present ending, which is impossible (पूर्व is not a verbal root). पूर्वस्य is a genitive case-form, not the तसिल् direction adverb. Only पूर्वतः follows the model.

38. (C) Reduplicating the initial syllable is the morphological sign of the DESIDERATIVE (सन्), which converts a root into a noun/verb of WISHING to perform that action — hence पा 'drink' → पिपासा 'wish to drink = thirst'. The augment अ- is a wholly different morpheme that marks PAST tense on a verb (उत्+अ+पतत् → उदपतत्). They share nothing: one signals desire, the other past time; reduplication is not 'the augment written twice'. It does not mark plural (पिपासा is not 'many thirsts'), nor is it a tense marker (desideratives are about desire, not future/present).

39. (C) The desiderative pattern means 'wish to do X'; built on गम् it means 'wish to go'. What it shares with पिपासा is the reduplicative desiderative formation (the 'wish-to-VERB' shape); what differs is only the root (गम् vs पा), hence a different desired action. It is not a past form (no augment is involved — that is a separate device). It is not a -तः direction adverb (तसिल् makes direction words, not desideratives). And the reduplication marks DESIRE, not plurality, so 'two goings' misreads the morpheme.

40. (A) A desiderative is 'desire to do [root-action]', so the root supplies the action: पा (drink) → thirst, भुज् (eat) → hunger. Knowing the root therefore already tells you which desire it names. The root does not encode number (how many times) — that is unrelated to which feeling. It encodes neither direction (that is the job of तसिल् -तः) nor tense (desideratives are about desire, and tense does not determine which appetite is meant).

41. (C) Naming one desire (thirst) says nothing about the presence or absence of another (hunger); the text simply foregrounds what is relevant. So inferring 'he had eaten and felt no hunger' over-reads the silence — disciplined reading neither affirms nor denies the unstated. Thirst and hunger are not OPPOSITES whose presence excludes the other; one can be both. They are not SYNONYMS either (पा-drink vs भुज्-eat). And पिपासा is thirst (from पा 'drink'), not hunger, so the last option mis-glosses the root.

42. (C) Any word on this model shares the desiderative shape ('wish to VERB'); what differs is the underlying root and thus the action desired — श्रु gives 'wish to hear', भुज् gives 'wish to eat'. It does NOT share the root भुज् (श्रु ≠ भुज्), nor a 'tense' (desideratives are not tensed forms). There is no past augment involved (that belongs to verbs like उदपतत्). And there is no तसिल् suffix or gender at issue — those belong to direction adverbs and adjectives, not to these desire-nouns.

43. (A) श्रान्त/क्लान्त = worn out in BODY (fatigue); पिपासायुक्त = filled with thirst, a BODILY appetite; खिन्न = dejected in MIND, a mental/emotional state. So two are bodily, one mental. They are not all mental moods (fatigue and thirst are bodily). They are not all appetites (fatigue is not an appetite, dejection is not bodily). And the last option reverses the assignment: खिन्न is mental, श्रान्त bodily — not the other way round.

44. (B) -युक्त = 'joined with/possessed of', so X-युक्त = 'full of X'. बुभुक्षायुक्तः = full of hunger = still hungry, wanting to eat — exactly parallel to पिपासायुक्तः 'full of thirst, still wanting to drink'. -युक्त does NOT mark completion ('has eaten'); that would reverse its sense of present possession of the want. It does not mean 'free from' (that is the opposite). And it has no direction sense — direction is the job of तसिल् -तः, not -युक्त.

45. (D) खिन्नः names a MENTAL state (dejection), so it must go if only bodily states remain; श्रान्तः (fatigue) and पिपासायुक्तः (thirst) are bodily and stay. श्रान्तः is bodily fatigue, not a mental mood, so it is not the one to cut. पिपासायुक्तः (thirst) is a bodily appetite, not 'purely emotional'. And not all three are bodily — खिन्नः is the mental outlier.

46. (B) पिपासा is a desiderative — it names a WISH (to drink) that is still pending. श्रान्तः is a past participle naming a CONDITION the fox has reached (being worn out). So one is a forward-looking desire, the other a resultant state. They are not 'both finished conditions' (पिपासा is a live want, not a completed condition). They are not 'both desires' (श्रान्तः is a state, not a wish for rest expressed as a desiderative). And the reversal (पिपासा=state, श्रान्तः=desire) inverts both.

47. (B) Exertion → fatigue → श्रान्तः for the load-carrier; going without water → thirst (wish to drink) → पिपासायुक्तः for the waterless one. Swapping them (load-carrier 'thirsty', waterless 'tired') misreads each cause. खिन्नः is mental dejection, which captures neither specific bodily cause. And बुभुक्षायुक्तः is hunger (wish to EAT), which fits neither a tired porter nor a thirsty traveller, even though both 'want something' — wanting is not specifically eating.

48. (A) The fable targets the dishonest downgrade (step 4 — 'they're sour anyway'), which excuses the failure by smearing the goal. Desiring (1) and striving even in vain (2–3) are not condemned — the text notes vain striving can even be noble. So the fault is not at striving (2), nor at wanting (1), nor distributed 'equally' across all steps; it is precisely the post-failure re-labelling.

49. (D) Honesty about failure (A) is exactly what the fable approves; dishonest devaluation (B) is what it condemns. So A escapes. B does not escape — 'protecting pride' by lying is the very vice indicted, not a virtue rewarded. Not 'both escape' — B is precisely the faulted reaction. And it is not 'speaking aloud' per se that is faulted (A also speaks aloud honestly) — it is the dishonest CONTENT of B, not the act of speaking.

50. (A) The fox both TRIED (jumped पुनः पुनः) and then SMEARED the goal ('sour'). The exact parallel needs both: real effort + dishonest devaluation — the hard-studying student who then calls the contest 'rigged'. The never-studied honest student lacks the prior effort AND makes no smear (he is honest). The resolve-to-try-again student has effort but NO smear (honest, even admirable). The selected-and-grateful student neither fails nor smears. Only the first matches both halves.

51. (A) The moral condemns the dishonest excuse, NOT the attempt; 'never attempt out-of-reach things' urges abandoning effort, which the fable explicitly does not teach (striving, even in vain, is not faulted). The other three faithfully capture the moral: not belittling failed goals, being honest about failure, and recognising that pride drives the lie. So the un-faithful one is the 'never attempt' maxim.

52. (C) Voicing 'they're sour' makes the self-justifying rationalisation explicit and public — that overt excuse is the fable's target; without it (silent walk-off) there is only honest failure and no lie to indict. Speaking does not 'prove he could reach them' (he demonstrably could not). It does not establish the grapes were really sour (he never tasted

them). And it says nothing about thirst — the verdict concerns the grapes, not his earlier thirst.

53. (C) Casting it as 'IF not obtained, THEN called sour' lifts the single episode into a pattern any reader can recognise in themselves — that is the generality gained. It does NOT assert a factual law that unreachable fruit becomes sour (that would endorse the fox's lie). It does not report any eating (he never reached them). And it does not lose meaning or stay confined to grapes — the maxim's whole power is that it transcends grapes to describe human rationalisation.

54. (D) The correct synthesis: श्रान्तः (tired), उत्पतति is PRESENT 'leaps up', न लभ्यते is PASSIVE 'is not obtained', आम्लम् 'sour' is the dishonest verdict, and the moral condemns the excuse. The first distractor mis-tenses उत्पतति as past, mis-glosses आम्लम् as 'sweet', and inverts the moral. The second mis-tenses उत्पतति as future, mis-glosses आम्लम् as a direction, and invents a directions-moral. The third mis-glosses उदपतत् as present, claims he obtained the vine (he did not), and reverses the moral into 'give up early'.

55. (D) Both clauses misstate the moral. The fable does not teach giving up (it does not fault the striving, which can be noble) — error one. And it does not endorse insulting the goal; it WARNS against that dishonest smear — error two. So two errors. 'Zero' wrongly endorses the bad summary. The 'one error' options each let one false clause stand, but neither clause is acceptable.

56. (A) The original: न लभ्यते चेत् = 'IF NOT obtained'. The bad translation says 'BECAUSE it WAS obtained' — it has dropped the negation (न), turned the conditional चेत् into a causal 'because', and reversed obtained/not-obtained. That single inversion of the condition is the fatal flaw. It does not mis-render द्राक्षाफलम् (still 'grape-fruit') nor आम्लम् (still 'sour'), and the tense of लभ्यते is not the issue — the logical reversal of the condition is.

57. (C) Honesty about the failure ('I couldn't reach them today') is the wise response the fable endorses. Dismissing the grapes as 'sour and worthless' IS the fox's actual vice. Blaming the forest merely relocates the excuse outward (still dishonest deflection). And 'I never wanted them' denies the desire he plainly had (he was striving for them) — another face-saving lie. Only the honest admission follows the lesson.

58. (A) All three must be right: उत्पतति present, पिपासा ← पा (drink), moral = do not belittle failed goals. The first distractor errs on every count (past / भुज् / give up). The second mis-sources पिपासा to भुज् and inverts the moral. The third mis-tenses उत्पतति as future and substitutes a directions-moral. Only the correct combination passes on all three.

59. (B) द्राक्षाफलम् is the OBJECT judged; न लभ्यते चेत् is the CONDITION (if not obtained); आम्लम् is the VERDICT (sour). The fox/tired/left mapping invents words not in the title. The vine/jumped/sweet mapping mis-glosses both noun and verdict. The last option

scrambles the roles — labelling the verdict आम्लम् as the object and the condition-clause as a verdict — so it mislabels every slot.

60. (A) The correct statement is right on all counts: शृगालः=fox, श्रान्तः=tired, उत्पतति=present 'leaps up', द्राक्षाफलम्=grape-fruit, न लभ्यते=passive 'is not obtained', आम्लम्=sour agreeing with neuter फलम्, moral against the excuse. The distractors each plant multiple errors: (1) glosses खिन्नः as 'thirsty' (it is dejection), mis-tenses उदपतत् as present, mis-genders आम्ला with neuter फलम्, and inverts the moral; (2) calls लोमशा 'the vine' (लोमशा 'hairy' describes the fox), glosses पिपासायुक्तः as hunger (पिपासा is thirst), mis-tenses the future उत्पतिष्यति as past, mis-glosses वामतः as 'right', and reverses the moral; (3) calls द्राक्षालता 'a single grape' (it is the vine), uses masculine आम्लः for it, mis-parses the active न लभते as passive, and condemns effort. Only the first is clean throughout.
