

Olympiad Test Paper — Sanskrit (Class 7) — Paper 5

Chapter 5: सेवा हि परमो धर्मः (Seva Hi Paramo Dharmah)

Paper 5 — (progressively harder)

Subject	Sanskrit (NCERT Class 7, Deepakam)
Chapter	5 — सेवा हि परमो धर्मः (Seva Hi Paramo Dharmah)
Total Questions	60 (Multiple Choice, single correct)
Maximum Marks	240
Suggested Time	90 minutes

Marking scheme: +4 for each correct answer · -1 for each wrong answer · 0 if unattempted.

Instructions: Each question has four options (A), (B), (C), (D); exactly one is correct.

Paper-5 traps weaponise every classic confusion at once: परमः as superlative of RANK not TIME and not 'only one'; हि as confirming-emphatic never

interrogative/negative/conjunctive; विसर्ग→ओ triggered solely by a FOLLOWING voiced sound (so it fails before voiceless क/त/प and in pause, and becomes ऽ-marked before अ);

सेव् आत्मनेपदी (सेवते) taking an ACCUSATIVE object so रोगिणः is acc. pl. (ण by णत्व from the र in रोग-) not genitive; चिकित्सक as अ-stem agent in -क vs रोगिन् as इन्-stem whose nom. sg. रोगी

hides the नृ; -वत् = इव/'like' (manner) never the possessive 'having'; -ईय building

gender/number-agreeing 'befitting-a-human' adjectives; कषाय flipping

decoction↔astringent-taste by CONTEXT alone; and सेवा (time+body+presence)

categorically above दान (transfer at a distance) — with distractors that look right under exactly one misread. Do not write on this paper — mark answers on your answer sheet.

1. A grammarian writes the inequality 'सेवा > every other धर्मः' to capture परमः. A second grammarian objects that this overstates the line. Who is right, and why?

- (A) The second is right: परमः only means service is one good duty among equals, so any inequality at all overstates it.
- (B) The second is right: परमः means service comes first in the day's sequence, a temporal order the inequality cannot represent.
- (C) The first is right, but only because परमः means service is the sole duty, so the inequality should read 'सेवा = the only धर्मः'.
- (D) The first grammarian is right: a superlative of rank asserts exactly that no other duty surpasses service, which the strict inequality 'greater than each of the rest' encodes precisely.

2. Suppose Sanskrit had a comparative degree word परतरः ('higher than') alongside परमः ('highest'). Rewriting the thesis as सेवा हि परतरो धर्मः would change the meaning to:

- (A) No change at all, since परतर and परम are exact synonyms in every context.
- (B) 'Service is the FIRST duty in time', because the comparative degree always carries a temporal sense.
- (C) 'Service is not a duty at all', because the comparative negates the predicate noun.
- (D) 'Service is the HIGHER duty' — a two-way comparison implying just one other duty service is being set above, weaker than ranking it over all.

3. Four students rank duties. Only one ranking is what सेवा हि परमो धर्मः actually licenses. Which?

- (A) Service sits at the top; other duties (truthfulness, study, etc.) are real and ordered below it, none above it.
- (B) Service and all other duties tie for first place, sharing the top equally.
- (C) Service is at the bottom, the foundation that all higher duties rest on.
- (D) Service is the only entry in the ranking; the list has no other duties.

4. A motto-writer wants 'truth is verily the supreme law' built slot-for-slot on सेवा हि परमो धर्मः (subject — emphatic — superlative-adjective — predicate-noun). The correct fill of the परमः slot is the word for:

- (A) 'truth' — the subject, since the subject occupies the परमः slot.
- (B) 'verily' — the emphatic, since परमः itself carries the emphasis in the line.
- (C) 'law' — the predicate noun, since परमः and धर्मः are a single fused word.
- (D) 'supreme/highest' — the ranking adjective, agreeing with the predicate noun 'law'.

5. If someone argued 'since परमः means highest, सेवा हि परमो धर्मः must mean service is the highest-RANKING profession a person can hold', the precise error is that they:

- (A) Read परमः as a temporal 'first', which is the only mistake in the sentence.
- (B) Read सेवा as 'salary', so the line becomes about pay rather than rank.
- (C) Made no error; 'highest-ranking profession' is exactly what धर्मः means here.
- (D) Read धर्मः as 'profession/post' rather than 'duty/right action', smuggling in the पदवी sense the chapter explicitly ranks below service.

6. The thesis ranks सेवा above other duties. A reader infers 'therefore the chapter forbids doing any other duty until all service is finished.' This inference is invalid because:

- (A) It is actually valid; 'highest duty' does mean 'the duty to finish before all others'.
- (B) It is invalid because the chapter ranks service LOWEST, not highest.
- (C) Ranking a duty highest says nothing about a sequence of performance; 'highest in worth' does not entail 'must be completed first in time'.
- (D) It is invalid only because there are no other duties for service to precede.

7. A teacher removes हि and reads सेवा परमो धर्मः, then claims the meaning is now the opposite. Evaluate:

- (A) She is right: without हि the sentence means 'service is NOT the highest duty'.
 (B) She is wrong about 'opposite': the assertion 'service is the highest duty' survives intact; only the confirming 'verily/indeed' force is lost, leaving a flatter but same-meaning claim.
 (C) She is right: without हि the sentence becomes a question, 'is service the highest duty?'
 (D) She is wrong, but only because हि is grammatically mandatory and the sentence is now ungrammatical.

8. Which English rendering best preserves the SPECIFIC nuance हि adds (over a bare 'service is the highest duty')?

- (A) 'Is service the highest duty?' (B) 'Service is not the highest duty.'
 (C) 'Service, indeed, is the highest duty.' (D) 'Service and the highest duty.'

9. A student says 'हि must mean the same as the English word "because", since both can introduce a reason.' Within this single line सेवा हि परमो धर्मः, the safest correction is:

- (A) Here हि functions as a confirming emphatic within one clause ('verily'); it is not joining a reason-clause to a result-clause, so 'because' overfits.
 (B) Correct as stated: हि is exactly the conjunction 'because' and joins two clauses here.
 (C) हि means 'but', marking a contrast between सेवा and धर्मः.
 (D) हि means 'or', offering सेवा as one of several alternative duties.

10. परमः becomes परमो before धर्मः. Of the following continuations of परमः, in which ONE would the विसर्ग also become ओ?

- (A) परमः + गुणः (before voiced ग्) → परमो गुणः
 (B) परमः + कालः (before voiceless क्) → परमो कालः
 (C) परमः + तपः (before voiceless त्) → परमो तपः
 (D) परमः + पन्थाः (before voiceless प्) → परमो पन्थाः

11. Apply the very rule that gives परमो धर्मः to the join सेवकः + सेवते. The correct result is:

- (A) सेवको सेवते — ओ appears, since any word boundary triggers it.
 (B) सेवकः सेवते — no ओ, because the following स् is a voiceless sibilant.
 (C) सेवकः सेवते changes to सेवकस् सेवते by adding स्.
 (D) सेवको सेवते — ओ appears because सेवते is a verb.

12. Consider परमः + आचारः. By correct sandhi this yields:

- (A) परम आचारः — the विसर्ग drops and the preceding अ stays short before the following आ (it does not become ओ).
 (B) परमो आचारः — ओ forms because आ is a vowel and all vowels are voiced.
 (C) परमोऽऽचारः — ओ plus a double अवग्रह. (D) परमाचारः — the words fuse into one with आ.

13. The chapter form परमो धर्मः and the form रामोऽगच्छत् (रामः + अगच्छत्) both show ओ. The true difference is:

- (A) There is no difference; both add an अवग्रह invisibly.
 (B) In परमो धर्मः the ओ is from a vowel merger, while in रामोऽगच्छत् it is from a consonant.
 (C) रामोऽगच्छत् is simply wrong; -अः never changes before अ.
 (D) Before धर्मः a voiced consonant follows so -अः → ओ with no अवग्रह; before अगच्छत् a short अ follows, which is absorbed and marked by अवग्रह (ऽ).

14. A student claims परमो in परमो धर्मः is the locative singular परमे that 'softened' to ओ. The decisive refutation is:

- (A) Correct: परमो is indeed locative परमे, since locatives commonly end in ओ.
 (B) परमो is the dual परमौ shortened, agreeing with two duties.
 (C) परमो is परमः (nominative, agreeing with the nominative धर्मः) whose final विसर्ग became ओ by sandhi; a locative परमे would not agree with the nominative subject-complement धर्मः and would not arise here.
 (D) परमो is the neuter परमम् with its म् dropped before धर्मः.

15. Which join below is performed CORRECTLY by the same विसर्ग→ओ rule, with the others being errors?

- (A) बालकः + चलति → बालको चलति (B) बालकः + पतति → बालको पतति
 (C) बालकः + त्यजति → बालको त्यजति (D) बालकः + वदति → बालको वदति

16. By the very rule that turns परमः → परमो before धर्मः, a final -अः also becomes ओ before a following nasal or semivowel (which are voiced). Which join is therefore CORRECT?

- (A) नरः + खादति → नरो खादति (before voiceless ख)
 (B) नरः + छिनत्ति → नरो छिनत्ति (before voiceless छ) (C) नरः + नमति → नरो नमति (before voiced न)
 (D) नरः + स्मरति → नरो स्मरति (before voiceless स)

17. मानवीय comes from मानव + -ईय. Building the parallel 'pertaining to / befitting the Sun (सूर्य)' on the SAME pattern (with the regular initial वृद्धि) gives:

- (A) सूर्यवत् — built with -वत् ('like the Sun'), the same suffix as मानवीय.
 (B) सूर्यिन् — built with -इन् ('possessing a Sun'), parallel to मानवीय.
 (C) सौर / सौर्य — initial vowel takes वृद्धि (सू→सौ) under the -अ/-य taddhita, yielding 'solar / pertaining to the Sun'.
 (D) सूर्यकः — built with -क ('one who suns'), parallel to मानवीय.

18. मानवीयाः गुणाः is nom. pl. masc. If the chapter instead wrote मानवीय— modifying a neuter plural कर्माणि ('deeds'), the correctly agreeing form is:

- (A) मानवीयानि कर्माणि — neuter nominative plural in -आनि.
 (B) मानवीयाः कर्माणि — keeping the masculine -आः ending.
 (C) मानवीया कर्माणि — feminine singular -आ.
 (D) मानवीयम् कर्माणि — neuter singular -अम्.

19. If मानवीय modified दया ('compassion', feminine singular), the agreeing form, and a faithful gloss of the phrase, would be:

- (A) मानवीया दया — 'humane compassion' (compassion befitting a human being).
- (B) मानवीयः दया — 'humane compassion', with the masculine -अः form.
- (C) मानवीयाः दया — 'humane compassions', the plural form.
- (D) मानवीयम् दया — 'a humane thing of compassion', neuter.

20. Exactly ONE of these built words correctly pairs a chapter suffix with its meaning. Which?

- (A) मानविन् = 'humane', using -इन् as मानवीय does.
- (B) देशीय = 'pertaining to a country' (the -ईय 'pertaining/befitting' taddhita, the same suffix family as मानवीय).
- (C) मानववत् = 'humane qualities', using -वत् as मानवीय does.
- (D) मानवक = 'one who humans', using agent -क as मानवीय does.

21. A debater says 'मानवीयाः is the plural of मानव, so it just means "the humans".' The precise flaw is:

- (A) No flaw: मानवीयाः is indeed simply 'the humans' in the plural.
- (B) The flaw is only that मानव is feminine, so the plural should be feminine.
- (C) The flaw is that मानव has no plural at all in Sanskrit.
- (D) मानवीयाः is not the plural of the NOUN मानव but an -ईय ADJECTIVE ('befitting a human, humane'); its plural -आः marks agreement with गुणाः, not a count of people.

22. सेव् is आत्मनेपदी. 'You two serve the (two) sick' (2nd person dual) is correctly:

- (A) युवां रोगिणौ सेवथः
- (B) युवां रोगिभ्यां सेवेथे
- (C) युवां रोगिणौ सेवेथे
- (D) युवां रोगिणौ सेवयथः

23. Convert 'the physician serves the sick' (चिकित्सकः रोगिणः सेवते) to the passive, keeping सेव्. The well-formed passive is:

- (A) चिकित्सकः रोगिणः सेव्यते — keeping the physician nominative and the sick accusative.
- (B) रोगिणः चिकित्सकं सेवन्ते — the sick serve the physician.
- (C) चिकित्सकाय रोगिणः सेव्यन्ते — the agent in the dative.
- (D) चिकित्सकेन रोगिणः सेव्यन्ते — 'the sick are served by the physician': agent in instrumental, patient रोगिणः as nominative plural subject of the passive verb.

24. 'May the physician serve the sick!' (a wish/benediction) keeps सेव् आत्मनेपदी. The correct 3rd-sg form is:

- (A) सेवेत — the optative (विधिलिङ्) 3rd-sg आत्मनेपद.
- (B) सेवतु — an imperative परस्मैपद ending.
- (C) सेवेत् — the optative but with the परस्मैपद ending.
- (D) सेविष्यते — the future, not a wish.

25. In चिकित्सकः रोगिणः सेवते, swap to make the SICK the ones serving and the PHYSICIAN the one served, preserving सेव्'s accusative government and आत्मनेपद voice. The result is:

- (A) रोगिणः चिकित्सकं सेवन्ते — the sick (nom. pl.) serve the physician (acc. sg.).
- (B) रोगिणः चिकित्सकः सेवन्ते — both in the nominative.
- (C) रोगिभिः चिकित्सकं सेवन्ते — the sick in the instrumental.
- (D) रोगिणः चिकित्सकं सेवन्ति — using the परस्मैपद ending.

26. A learner writes सेवामि for 'I serve', reasoning 'first-person singular present always ends in -मि'. The exact correction is:

- (A) Correct as written: सेवामि is the proper आत्मनेपद 1st-sg form.
- (B) Because सेव् is आत्मनेपदी, its 1st-sg present is सेवे (ending -ए), not सेवामि; the -मि ending belongs to परस्मैपद verbs.
- (C) It should be सेवसि, the 1st-sg आत्मनेपद form.
- (D) It should be सेवयामि, since serving requires the causative.

27. Why can चिकित्सकः रोगिणः सेवते NOT mean 'the physician serves FOR the sick (on their behalf)' with रोगिणः read as a dative-like beneficiary?

- (A) Because सेव् governs the dative, so रोगिणः must be the beneficiary and the reading is actually correct.
- (B) सेव् governs its object in the accusative, and रोगिणः here is the accusative plural of रोगिन्; a beneficiary 'for the sick' would require a dative (रोगिभ्यः), which is not present.
- (C) Because रोगिणः can only be genitive, so the sentence is ungrammatical and means nothing.
- (D) Because सेवते is passive, so the sick must be the agent 'by the sick'.

28. सेव् is आत्मनेपदी. To narrate 'the physician was serving the sick' in the past imperfect (लङ्), the correctly formed 3rd-sg verb is:

- (A) असेवत — the imperfect 3rd-sg आत्मनेपद, with the augment अ- and an आत्मनेपद ending.
- (B) असेवत् — the imperfect, but with the परस्मैपद ending.
- (C) सेवते — the present tense, not the past.
- (D) असेवयत् — the causative imperfect, 'caused to serve'.

29. रोगिन् ('sick one') and स्वामिन् ('master/lord') share the इन्-stem pattern. If the accusative plural of रोगिन् is रोगिणः (न→ण by णत्व), the accusative plural of स्वामिन् is:

- (A) स्वामिनः — with plain न, because स्वामिन् contains no preceding र/ष to trigger णत्व.
- (B) स्वामिणः — with ण, since every इन्-stem retroflexes its न् in the accusative plural.
- (C) स्वामिभिः — the instrumental plural form.
- (D) स्वामी — the nominative singular, unchanged for the accusative plural.

30. Which form correctly gives the GENITIVE plural ('of the sick') of रोगिन्, consistent with the चिकित्सकः रोगिणः सेवते declension?

- (A) रोगिणः — which is the accusative (and nominative) plural, not the genitive.
- (B) रोगिभ्यः — the dative/ablative plural. (C) रोगिणाम् — 'of the sick', with ण by णत्व.
- (D) रोगिषु — the locative plural.

31. Decline both subject and object for 'one physician serves many sick people'. The correct pair is:

- (A) चिकित्सकाः (nom. pl.) ... रोगिणम् (acc. sg.) (B) चिकित्सकम् (acc. sg.) ... रोगिणः (acc. pl.)
(C) चिकित्सकौ (nom. dual) ... रोगिणौ (acc. dual) (D) चिकित्सकः (nom. sg.) ... रोगिणः (acc. pl.)

32. रोगी (nom. sg.) and the accusative singular रोगिणम् look very different. A student concludes they are two unrelated words. The correct account is:

- (A) They are unrelated; रोगी is an ई-stem and रोगिणम् belongs to a different noun.
(B) They are one इन्-stem (रोगिन्): in the nom. sg. the न् drops and इ lengthens to ई (रोगी), while the acc. sg. restores the न् and shows णत्व (रोगिणम्).
(C) रोगी is the masculine and रोगिणम् the feminine of the same idea.
(D) रोगिणम् is a spelling error for रोगीम्, the true accusative of रोगी.

33. On the चिकित्सक (-क agent) vs रोगिन् (-इन् characterised-by) template, coin (i) 'one who serves' and (ii) 'one afflicted by sorrow (शोक)'. The internally consistent pair is:

- (A) सेविन् (-इन्) ... शोककः (-क) (B) सेवकः (-क) ... शोककः (-क)
(C) सेविन् (-इन्) ... शोकिन् (-इन्)
(D) सेवकः (agent -क, 'server') ... शोकिन् (characterising -इन्, 'sorrowful / sorrow-stricken')

34. Match each derived word to the EXACT thing its suffix encodes: चिकित्सकः, रोगिन्, यन्त्रवत्, मानवीयाः.

- (A) possession 'having' (-क) · agent (-इन्) · pertaining-to (-वत्) · likeness (-ईय)
(B) patient/undergoer (-क) · agent (-इन्) · possession 'having' (-वत्) · likeness (-ईय)
(C) agent/doer (-क) · characterised-by-a-state (-इन्) · likeness/manner 'like' (-वत्) · pertaining-to/befitting (-ईय)
(D) likeness (-क) · pertaining-to (-इन्) · agent (-वत्) · possession (-ईय)

35. यन्त्रवत् uses -वत् in the 'like/इव' sense. Which coinage uses -वत् in the OTHER (possessive 'having') sense, making it a poor parallel to यन्त्रवत्?

- (A) वायुवत् — 'like the wind' (swift, the 'like' sense).
(B) गुणवत् — 'possessing virtues' (the 'having' -वत्), unlike यन्त्रवत्'s 'like'.
(C) अग्निवत् — 'like fire' (the 'like' sense). (D) मेघवत् — 'like a cloud' (the 'like' sense).

36. A translator renders यन्त्रवत् सेवते as 'serves the machine'. Two distinct errors are embedded. They are:

- (A) (1) सेवते should be सेवति; (2) यन्त्रवत् should be यन्त्रेण.
(B) (1) यन्त्रवत् means 'having a machine'; (2) सेवते means 'is served'.
(C) (1) -वत् means 'like' (manner), not a marker making यन्त्र an object meaning 'machine'; (2) सेव्'s object would have to be accusative (यन्त्रम्), but यन्त्रवत् is an adverbial 'like a machine', not an object at all.
(D) There are no errors; 'serves the machine' is the correct translation.

37. Praising the doctor as यन्त्रवत् borrows ONE quality of a machine. A critic complains the comparison also imports a machine's coldness, contradicting मानवीयाः गुणाः. The chapter's own resolution is:

- (A) The critic is right: यन्त्रवत् and मानवीयाः गुणाः contradict each other, so the chapter is incoherent.
- (B) यन्त्रवत् does mean cold indifference, and the chapter accepts that the ideal servant is unfeeling.
- (C) यन्त्रवत् borrows only the machine's tireless steadiness (stamina), while मानवीयाः गुणाः supplies the warmth; the two coexist — machine-like in effort, human in heart.
- (D) मानवीयाः गुणाः is dropped once यन्त्रवत् is applied, since one cannot be both.

38. Which everyday description matches यन्त्रवत् in EXACTLY the chapter's intended sense (and not a misread)?

- (A) A clerk who owns the newest computer in the office.
- (B) A relief worker who keeps ladling soup steadily for ten hours without flagging.
- (C) An officer who treats petitioners coldly and without feeling.
- (D) A factory that has replaced all its human workers with robots.

39. Suppose the text read यन्त्री instead of यन्त्रवत् to describe the doctor. यन्त्री (an इन्-stem from यन्त्र) would most naturally mean:

- (A) 'one who HAS/operates a machine' (a machinist) — the possessive/characterising -इन् sense, which loses the 'like a machine' simile of यन्त्रवत्.
- (B) 'like a machine' — exactly the same as यन्त्रवत्, so nothing changes.
- (C) 'befitting a machine' — the -ईय sense.
- (D) 'one who is served by a machine' — a passive sense.

40. A surgeon is (i) granted the official rank 'Chief of Surgery' and (ii) awarded an M.D. degree. Using the chapter's vocabulary AND its value-ranking, the correct statement is:

- (A) (i) is an उपाधिः and (ii) is a पदवी; the chapter ranks the पदवी highest.
- (B) (i) is a पदवी (post/rank held) and (ii) is an उपाधिः (qualification earned); the chapter would rank his सेवा above BOTH.
- (C) Both are उपाधिः; the chapter ranks उपाधिः above सेवा.
- (D) Both are पदवी; the chapter treats पदवी and सेवा as equal.

41. The chapter says the doctor renounced the PURSUIT of उपाधिः and पदवी. A reader concludes he therefore had no degree and held no post. The precise flaw is:

- (A) Renouncing the PURSUIT of titles is about not chasing them as one's goal; it does not entail lacking them — he can hold a degree yet not live for it.
- (B) No flaw: giving up the pursuit necessarily means he possessed neither.
- (C) The flaw is that उपाधिः means a post, so he kept his degree but lost his post.
- (D) The flaw is that पदवी means a degree, so he kept his post but lost his degree.

42. Which single sentence correctly states the chapter's ranking of सेवा, उपाधि: and पदवी while using both vocabulary words accurately?

- (A) The post one earns by study (उपाधि:) outranks service, since one must qualify before serving.
- (B) The degree one holds in office (पदवी) outranks service, since rank confers the power to serve.
- (C) All three rank equally, the degree, the post and service each being a way of helping.
- (D) Service outranks both the degree one earns (उपाधि:) and the post one holds (पदवी); the credential and the rank are mere trappings beside the supreme duty of serving.

43. A job advert demands 'maximum उपाधि: and पदवी; humane qualities optional.' Mapping the chapter's values, the advert inverts the chapter because it:

- (A) Correctly applies the chapter, since the chapter prizes उपाधि: and पदवी most.
- (B) Errs only in mentioning पदवी, which the chapter never discusses.
- (C) Elevates the outward credential and rank above मानवीया: गुणा: and सेवा, exactly reversing the chapter's order in which humane service is supreme.
- (D) Errs only because it omits wealth (धनम्), which the chapter ranks highest.

44. Across उपाधि:, पदवी, यन्त्र and कषाय, exactly ONE statement is fully correct. Which?

- (A) उपाधि: names a post one holds, while पदवी names a herbal decoction.
- (B) पदवी names a post/rank one holds, while उपाधि: names a qualification one earns.
- (C) यन्त्र in यन्त्रवत् is possessed by the doctor (he 'has a machine').
- (D) कषाय fixes its meaning by grammatical gender, not by context.

45. Two sentences use कषाय. (1) वैद्य: रोगिणे कषायं पाययति. (2) आमलकफले कषाय: रस: वर्तते. The meanings of कषाय in (1) and (2) are, respectively:

- (A) (1) the astringent taste; (2) a herbal decoction.
- (B) both (1) and (2) the astringent taste, since the word never means medicine.
- (C) (1) a herbal decoction/medicine (the doctor makes a sick man drink it); (2) the astringent taste (it is in the āmalaka fruit).
- (D) both (1) and (2) a decoction, since कषाय always means medicine.

46. A student rule-of-thumb says 'कषायम् (neuter) = medicine; कषाय: (masculine) = taste.' Test it against the chapter's teaching:

- (A) The rule is exactly right; Sanskrit assigns medicine to neuter and taste to masculine.
- (B) The rule is right but reversed: masculine is the medicine and neuter the taste.
- (C) The rule is unreliable: कषाय is disambiguated by CONTEXT, not by gender; the same form can be a decoction in a sickroom or a taste in a kitchen.
- (D) The rule is right because कषाय changes meaning by grammatical number, which the genders track.

47. Preparing कषायम् with one's own hands is offered as proof that the doctor's service is concrete. The hidden assumption that makes 'concrete' follow is:

- (A) That कषायम् here means the astringent taste, which is concrete because it is sensory.
- (B) That preparing medicine earns the doctor a higher उपाधि:, proving the act mattered.
- (C) That the doctor delegates the brewing to an assistant, so the care is institutional.
- (D) That performing a tangible act of care in person counts as enacted service, distinguishing सेवा from mere words or distant giving.

48. A logistics firm ships free medicine kits (including pre-made कषाय decoctions) to remote villages but employs no one to administer them. By the chapter's सेवा/दान boundary, this is:

- (A) दान — a transfer of goods at a distance; the missing personal time and presence keeps it from being सेवा, even though the goods are medicines.
- (B) सेवा — because supplying actual medicine to the sick is the very heart of service.
- (C) both सेवा and दान equally, since the medicine reaches the sick either way.
- (D) neither, because shipping medicine falls outside both categories.

49. Helper P brews and personally feeds कषायम् to a sick stranger each night, owning nothing to give. Helper Q endows the hospital's entire medicine budget but never enters it. The chapter's verdict pairs roles to its ranking as:

- (A) Q performs सेवा because money is the most useful help, and P merely assists.
- (B) Both perform सेवा, since both ultimately benefit the sick.
- (C) P performs सेवा (time, body, presence) and Q performs दान (resources at a distance); the chapter crowns P's सेवा as the higher duty.
- (D) Both perform दान, since brewing medicine is itself a kind of giving.

50. Why, in the chapter's logic, does adding MONEY to an act of presence not make सेवा 'more' than सेवा, while removing presence from a gift collapses it to mere दान?

- (A) Because money is morally tainted, so any सेवा that includes it is downgraded to दान.
- (B) सेवा is defined by the giver's own time, body and presence; money is incidental to it, so its presence neither raises nor is required, but the absence of presence is fatal — it reduces the act to a distant transfer (दान).
- (C) Because सेवा legally requires money, so removing presence is irrelevant as long as money is given.
- (D) Because दान is the higher category, so any act with presence is automatically a lesser दान.

51. A council renames its 'Best Donor Award' to 'Best Servant Award' and gives it to the largest cheque-writer. Identify BOTH category errors the chapter would flag.

- (A) It correctly identifies the servant, erring only in the award's wording.
- (B) It errs only in that दान is morally wrong and should never be awarded.

(C) It errs because the largest cheque is actually सेवा, but it should have ranked it below a smaller cheque.

(D) It misclassifies दान (distant giving) as सेवा (presence), and it crowns the wrong act as 'best servant' since the chapter ranks personal service, not the size of a gift, as supreme.

52. Match each suffix to a single chapter word that exemplifies it, with NO suffix repeated:

-क, -इन्, -वत्, -ईय.

(A) -क → रोगिन्; -इन् → चिकित्सकः; -वत् → मानवीय; -ईय → यन्त्रवत्

(B) -क → यन्त्रवत्; -इन् → मानवीय; -वत् → चिकित्सकः; -ईय → रोगिन्

(C) -क → मानवीय; -इन् → यन्त्रवत्; -वत् → रोगिन्; -ईय → चिकित्सकः

(D) -क → चिकित्सकः; -इन् → रोगिन्; -वत् → यन्त्रवत्; -ईय → मानवीय

53. Exactly ONE of these word-meaning pairs is WRONG. Identify it.

(A) उपाधिः = a qualification/degree (correct).

(B) यन्त्रवत् = 'having a machine' (WRONG — here -वत् means 'like', so it is 'like a machine').

(C) रोगिन् = one characterised by illness, the sick (correct).

(D) मानवीयाः = humane, befitting a human (correct).

54. A layered claim reads: 'चिकित्सकः रोगिणः सेवति यन्त्रवान्, उपाधिं च लभते।' Count the distinct defects against the chapter's grammar and message.

(A) Zero — the sentence is grammatically and thematically correct.

(B) One — only सेवति is wrong; the rest is fine.

(C) Three: सेवति should be आत्मनेपद सेवते; यन्त्रवान् (possessive 'having a machine') should be यन्त्रवत् ('like a machine'); and the doctor's earning an उपाधिः contradicts his renunciation of title-pursuit.

(D) Two — सेवति and उपाधिः are wrong, but यन्त्रवान् is the correct possessive form.

55. Which single sentence simultaneously (a) honours परमः as 'highest rank', (b) keeps सेवा above दान, (c) uses यन्त्रवत् correctly, and (d) uses उपाधिः correctly?

(A) 'Service is the first duty of the morning; sent as money, done with the newest machine, it outshines a degree.'

(B) 'Service ranks highest among duties; given in person rather than by a distant gift, performed tirelessly like a machine yet warmly, it matters more than any degree one might earn.'

(C) 'A degree ranks highest among duties; given from afar, performed coldly like a machine, it surpasses mere service.'

(D) 'Service ranks highest; given as money like a machine owner, it earns the doctor his post.'

56. Read the inference chain: 'परमः means highest rank → therefore the doctor with the highest पदवी performs the परमो धर्मः.' The fallacy is:

(A) There is no fallacy; the highest-ranked doctor does the highest duty.

(B) Equivocation: परमः ranks DUTIES (with सेवा highest), but the chain re-applies 'highest' to POSTS (पदवी), smuggling the high-rank idea onto the very thing the chapter ranks below service.

(C) The fallacy is reading परमः as 'first in time', which the chain does.

(D) The fallacy is that सेवा is not a duty, so परमः cannot apply to it.

57. The chapter can be framed as 'what one HAS' vs 'what one DOES'. Which mapping is exactly right, AND correctly places कषायम्?

(A) HAS: सेवा and कषायम् (service, medicine). DOES: उपाधिः and पदवी (the doctor's daily work).

(B) HAS: उपाधिः, पदवी (degree, post). DOES: सेवा — the tireless serving of रोगिणः with मानवीयाः गुणाः, including hands-on acts like preparing कषायम्.

(C) HAS: मानवीयाः गुणाः. DOES: उपाधिः and पदवी, with कषायम् being something merely owned.

(D) HAS: कषायम् only. DOES: उपाधिः, पदवी, सेवा and मानवीयाः गुणाः alike.

58. Suppose a rival maxim दानं हि परमो धर्मः were proposed. Within THIS chapter's framework, the strongest objection is:

(A) दानम् cannot grammatically occupy the सेवा slot, so the maxim is impossible to form.

(B) दानम् means exactly the same as सेवा, so the new maxim is merely redundant.

(C) दानम् is a verb and cannot be a subject, so the maxim is ill-formed.

(D) The chapter deliberately ranks सेवा above दान, so crowning दान as परमो धर्मः would elevate distant giving above personal presence — lowering, not raising, the duty being called supreme.

59. Two nurses serve a ward. Nurse A works steadily all twelve hours but barks at the patients; Nurse B is gentle but quits exhausted after two hours. Pulling यन्त्रवत् and मानवीयाः गुणाः together, the chapter's ideal:

(A) Requires BOTH: A has the यन्त्रवत् stamina but lacks मानवीयाः गुणाः, while B has the warmth but lacks the stamina; the ideal servant combines tireless steadiness with humane warmth.

(B) Is fully met by A, since tireless endurance (यन्त्रवत्) is all the chapter asks.

(C) Is fully met by B, since humane gentleness (मानवीयाः गुणाः) outweighs everything else.

(D) Is met by neither, because the chapter rejects both stamina and gentleness as relevant.

60. Pulling the whole chapter into one precise unpacking, सेवा हि परमो धर्मः is best read as:

(A) 'Service is verily the highest duty' — demonstrated by a physician who, setting aside the pursuit of degree and post, serves the sick in person (not merely by distant giving), working tirelessly like a machine yet with humane warmth.

(B) 'A degree is verily the highest duty' — shown by a physician amassing the most उपाधिः.

(C) 'The morning's first duty is verily service' — shown by a physician who serves before all other tasks each day.

(D) 'Giving wealth is verily the highest duty' — shown by a physician who funds the sick from afar without attending them.

Solutions — Sanskrit (Class 7), Chapter 5: सेवा हि परमो धर्मः (Seva Hi Paramo Dharmah) — Paper 5

Paper 5 — (progressively harder)

Marking: +4 correct, –1 wrong, 0 unattempted. Maximum marks **240**.

Answer Key

Q	Ans	Q	Ans	Q	Ans	Q	Ans	Q	Ans	Q	Ans
1	D	11	B	21	D	31	D	41	A	51	D

10	A	20	B	30	C	40	B	50	B	60	A

Answer-key distribution: A = 15, B = 15, C = 15, D = 15.

Worked Solutions

1. (D) परमः is a superlative of RANK. 'Highest among duties' means precisely that for every other genuine duty, service outranks it — exactly the inequality सेवा > each other धर्मः. The first grammarian's notation is faithful. The claim that परमः leaves service merely 'one among equals' contradicts the very word 'highest' and would make the line empty. Reading परमः as a temporal 'first of the day' substitutes a time-order for a rank-order — the recurring परमः=time trap. And reading it as 'sole duty' (service is the ONLY one) over-reads the superlative into a uniqueness claim: a superlative ranks others below, it does not abolish them; other duties still exist.

2. (D) A comparative (-तर) compares two things and says one outranks the other; a superlative (-तम/परम) ranks one above ALL the rest. So परतरः would shrink the claim from 'highest of all duties' to 'the higher of two', a genuine weakening. The synonym option ignores the comparative/superlative distinction entirely. The 'first in time' reading recycles the परमः=time error and wrongly assigns it to degree-of-comparison. The negation reading is baseless: comparatives modify, they do not negate.

3. (A) 'Highest duty' places service at the apex with others genuinely below it — the only ranking the superlative supports. A tie for first contradicts 'highest' (a superlative singles out one). Placing service at the BOTTOM inverts परम ('supreme') into a base/foundation, a misreading of the word's direction. And a one-entry list mistakes the superlative for a uniqueness claim — परम ranks others below, it does not delete them.

4. (D) The four slots map as सेवा=subject ('truth'), हि=emphatic ('verily'), परम:=ranking adjective ('supreme'), धर्म:=predicate noun ('law'). So the परम: slot takes 'supreme'. Putting 'truth' there confuses subject with adjective. Putting 'verily' there confuses the ranking adjective with the emphatic particle हि. Treating परम: + धर्म: as one fused word ignores that they are an adjective agreeing with its noun, joined only by sandhi — परम: is independently the superlative.

5. (D) The misreading keeps परम:='highest' correct but corrupts धर्म: in this chapter धर्म: is moral DUTY/right action, not a job-rank. Turning it into 'profession/post' imports the पदवी idea — the very outward distinction the chapter ranks below सेवा — so it inverts the lesson. परम: is read correctly here, so the 'temporal first' option misdiagnoses the fault. सेवा is untouched, so 'salary' is irrelevant. And 'no error' endorses the corruption of धर्म:.

6. (C) The inference slides from rank ('highest in worth') to temporal priority ('do first/finish before others') — the classic परम: rank-vs-time confusion, here disguised as a scheduling conclusion. A worth-ranking imposes no timetable. The 'actually valid' option commits exactly that slide. Saying the chapter ranks service lowest reverses परम. And 'no other duties exist' over-reads the superlative as a uniqueness claim, which it is not.

7. (B) हि is a confirming/causal emphatic ('verily, indeed'). Dropping it removes emphasis only; the core predication 'service IS the highest duty' is unchanged and fully grammatical. It never negates (so it cannot flip to 'not the highest'), never interrogates (so no question arises), and is not syntactically required (the sentence stands without it). Hence 'opposite' is false on every count, and the ungrammatical claim is also false.

8. (C) हि intensifies and confirms; 'indeed' captures that added force while keeping the same assertion. The interrogative rendering treats हि as a question marker (it never is). The negative rendering treats it as 'not' (it never is). 'Service and the highest duty' treats it as a conjunction 'and' (it is not a connective). Only 'indeed' matches the emphatic/confirming role.

9. (A) Although हि can have a causal flavour in longer passages, in this single-clause maxim there is no second clause for it to subordinate; it simply confirms/intensifies ('verily'). Calling it 'because' here invents a clause-link that the sentence does not contain. It is not adversative 'but' (no contrast is drawn between subject and predicate) and not disjunctive 'or' (no alternatives are listed). The emphatic reading is the only one the structure supports.

10. (A) विसर्ग from -अः becomes ओ only when the FOLLOWING sound is voiced. ण् is voiced, so परमो गुणः is correct. क्, त्, प् are all voiceless (unvoiced stops), before which -अः keeps its विसर्ग (परमः कालः, etc.) — it does NOT turn to ओ. The trap is assuming any consonant triggers ओ; the conditioning factor is voicing of the next sound, exactly as ध् (voiced) triggered परमो धर्मः.

11. (B) The -अः → ओ change requires a following VOICED sound. स् is a voiceless sibilant, so no ओ forms; सेवकः keeps its visarga before स् (the visarga-before-sibilant outcomes differ, but ओ is impossible here). The 'any boundary triggers ओ' option ignores the voicing condition. The 'add स्' option invents a change. The 'because it is a verb' option repeats the परमो धर्मः misdiagnosis — the trigger is the next SOUND's voicing, never the word's part of speech.

12. (A) Before a vowel OTHER than short अ, final -अः loses its विसर्ग and the words simply stand अ + (vowel): परमः + आचारः → परम आचारः. The ओ outcome is reserved for -अः before a VOICED CONSONANT (as in परमो धर्मः) and for -अः before short अ (giving परमोऽ...). Before आ there is no ओ — so 'परमो आचारः' wrongly extends the consonant rule to vowels, the double-अवग्रह form is spurious, and fusing into परमाचारः misapplies a long-vowel sandhi that does not occur here.

13. (D) Two distinct outputs of the same -अः source: (1) before a voiced CONSONANT (ध्) → ओ, written plainly: परमो धर्मः. (2) before a short अ → ओ with the following अ swallowed and shown by अवग्रहः रामोऽगच्छत्. So the difference is the अवग्रह, triggered by the following अ. Option two reverses which case is vowel-driven vs consonant-driven. 'No difference' ignores the अवग्रह. And '-अः never changes before अ' is plainly false — रामोऽगच्छत् is the standard result.

14. (C) धर्मः is nominative singular (the predicate noun), so its qualifying adjective must also be nominative singular: परमः. परमः + धर्मः → परमो धर्मः by विसर्ग-सन्धि. A locative परमे would clash in case with the nominative धर्मः and has no role here. The 'dual परमौ' option invents a number mismatch (one duty, not two). The 'neuter परमम् minus म्' option both mis-genders the masculine धर्मः and invents a non-existent म्-drop. Only the nominative-plus-sandhi account fits.

15. (D) व् is voiced, so बालकः + वदति → बालको वदति is right. The others begin with voiceless sounds — च् (चलति), प् (पतति), त् (त्यजति) — before which -अः does NOT become ओ. Each wrong option illegitimately extends the ओ-change to a voiceless onset, the exact trap behind परमो धर्मः: only a following voiced sound triggers ओ.

16. (C) The -अः → ओ change fires before any VOICED sound, which includes the voiced nasals and semivowels. न् is a voiced nasal, so नरः + नमति → नरो नमति is correct. The distractors all begin with voiceless sounds — ख् (aspirated voiceless stop), छ् (voiceless), and स् (voiceless sibilant) — before which -अः keeps its visarga and does NOT become ओ. As

with परमो धर्मः before voiced ध, the trigger is the voicing of the following sound, not its being a nasal, stop, or any particular class.

17. (C) मानवीय is a 'pertaining-to/befitting' taddhita meaning 'befitting a human', and such derivations regularly take वृद्धि of the first vowel (मानव itself shows मा-). The Sun-adjective on the same pattern with वृद्धि is सौर/सौर्य ('solar'). The distractors all swap in the WRONG suffix: -वत् ('like'), -इन् ('possessing'), -क (agent). मानवीय uses none of these; only the 'befitting/pertaining-to' taddhita (with वृद्धि) matches.

18. (A) An -ईय adjective agrees with its noun in gender, number and case. कर्माणि is neuter nominative PLURAL, so the adjective takes the neuter nom. pl. ending -आनि: मानवीयानि कर्माणि. Keeping masculine -आ: fails gender agreement. The feminine -आ and neuter singular -अम् fail both gender and/or number. Agreement, not the lexical meaning, decides the ending.

19. (A) दया is feminine singular, so the -ईय adjective takes the feminine singular -आ: मानवीया दया, meaning compassion that befits a human, i.e. humane compassion. The masculine -अ: and neuter -अम् fail gender agreement, and the plural -आ: fails number agreement with the singular दया. The gloss 'befitting a human' is fixed by -ईय; the ending is fixed by agreement.

20. (B) मानवीय is a -ईय derivative; देशीय ('pertaining to a country') is built on the same -ईय suffix and is glossed correctly, so it is the right pair. The distractors falsely attribute मानवीय's job to other suffixes: -इन् (possessive/characterising), -वत् ('like'), and agent -क. None of those builds 'befitting/pertaining to'; only -ईय does. Each wrong option encodes the suffix-confusion the chapter warns against.

21. (D) Adding -ईय turns the noun मानव into the adjective मानवीय ('humane/befitting a human'); the -आ: is the masculine nom. pl. ending agreeing with गुणा: ('qualities'), not a headcount of humans. So 'the humans' confuses the derived adjective with the base noun's plural. मानव is masculine (not feminine), and it certainly can be pluralised — so the other two diagnoses are also wrong. The real error is noun-vs-adjective.

22. (C) सेव् is आत्मनेपदी; the 2nd-person dual आत्मनेपद ending is -एथे, giving सेवेथे. The object 'two sick men' is accusative dual रोगिणौ (ण by णत्व). So युवां रोगिणौ सेवेथे is correct. सेवथः is a परस्मैपद ending (wrong voice). रोगिभ्यां is instrumental/dative dual, but सेव् governs the ACCUSATIVE, so the object must be रोगिणौ. सेवयथः injects a causative -अय and a परस्मैपद ending — doubly wrong.

23. (D) In a Sanskrit passive the agent goes to the INSTRUMENTAL (चिकित्सकेन), the former accusative object becomes the nominative subject (रोगिणः, here nom. pl.), and the verb agrees with it: सेव्यन्ते. Hence चिकित्सकेन रोगिणः सेव्यन्ते. Keeping the physician nominative and the sick accusative is just the active frame mislabelled. Reversing the roles (sick serve

physician) inverts the meaning. Putting the agent in the dative (चिकित्सकाय) uses the wrong case — the passive agent is instrumental, not dative.

24. (A) A wish uses the optative (विधिलिङ्). For an आत्मनेपद verb the 3rd-sg optative ends in -एतः सेवेत. सेवतु is an imperative form and belongs to परस्मैपद, wrong on both mood and voice. सेवेत् carries the परस्मैपद optative ending; since सेव् is आत्मनेपदी it must be सेवेत (आत्मनेपद). सेविष्यते is future tense, not a wish at all.

25. (A) If the sick are now the agents, they take the nominative plural रोगिणः and the verb is 3rd-pl आत्मनेपद सेवन्ते; the served physician becomes the accusative object चिकित्सकम्. Hence रोगिणः चिकित्सकं सेवन्ते. Two nominatives (रोगिणः चिकित्सकः) leaves no object. रोगिभिः is instrumental, but the agent of an active verb is nominative, not instrumental. सेवन्ति is परस्मैपद, but सेव् is आत्मनेपदी — a voice error.

26. (B) सेव् conjugates in आत्मनेपद, where the 1st-sg present ending is -एः सेवे. The -मि ending is परस्मैपद, so सेवामि is wrong for this verb. सेवसि is a परस्मैपद 2nd-sg form (also wrong person/voice). सेवयामि wrongly inserts the causative -अय; plain 'I serve' needs no causative. The fix is the आत्मनेपद सेवे.

27. (B) सेव् takes a direct ACCUSATIVE object; रोगिणः is the acc. pl. of रोगिन्, i.e. 'the sick' as the ones directly served. A 'for the sick / on their behalf' beneficiary would be dative रोगिभ्यः, which the sentence does not use. So the dative-beneficiary reading has no morphological support. सेव् does not govern the dative (refuting the first distractor), रोगिणः is not exclusively genitive (it is here accusative plural), and सेवते is active आत्मनेपद, not passive — so 'by the sick' is wrong too.

28. (A) The past imperfect (लङ्) prefixes the augment अ- to the stem and uses tense endings; for an आत्मनेपद verb the 3rd-sg is असेवत ('was serving'). असेवत् carries the परस्मैपद ending, but सेव् is आत्मनेपदी, so the आत्मनेपद form असेवत is required. सेवते is the present, not the past at all. असेवयत् inserts the causative -अय ('caused to serve') and also takes a परस्मैपद ending — wrong on two counts. The augment अ- plus the आत्मनेपद ending gives असेवत.

29. (A) णत्व (न→ण) needs a triggering र/ष earlier in the word with only permitted sounds between. रोग- HAS an र, so रोगिन् → रोगिणः. स्वामिन् has NO र or ष, so its न् stays: स्वामिनः. The trap 'every इन्-stem retroflexes' generalises णत्व illegitimately; it is conditioned by an र/ष trigger, not by the stem class. स्वामिभिः is instrumental, and स्वामी is the nominative singular — neither is the accusative plural.

30. (C) The genitive plural of इन्-stems is -आम्, and णत्व gives रोगिणाम् ('of the sick'). रोगिणः is the accusative/nominative plural, not genitive — a common confusion since both carry ण. रोगिभ्यः is dative/ablative plural ('to/from the sick'). रोगिषु is locative plural ('among/in the sick'). Only रोगिणाम् is the genitive plural.

31. (D) One physician = nominative singular चिकित्सकः; many sick = accusative plural रोगिणः. The other options mismatch number/case: चिकित्सकाः is plural (many physicians)

with रोगिणम् singular (one sick); चिकित्सकम् is accusative (wrong case for the subject); चिकित्सकौ/रोगिणौ are dual (two of each). Only चिकित्सकः ... रोगिणः encodes 'one ... many'.

32. (B) रोगिन् is a single इन्-stem. Its nominative singular loses the न् and lengthens इ→ई, surfacing as रोगी; the oblique cases restore the न् (with णत्व), giving रोगिणम्, रोगिणः, etc. So the two forms are the same word in different cases. They are not separate stems, not a gender pair (the इन्-stem here is masculine throughout), and रोगिणम् is the genuine accusative — रोगीम् is not a valid form. The hidden न् is the key the nominative masks.

33. (D) The agent ('the does-er') takes -क like चिकित्सकः सेवकः ('one who serves'). The one CHARACTERISED BY a condition takes -इन् like रोगिन् शोकिन् ('marked by sorrow'). So the consistent pair is सेवकः / शोकिन्. The other pairings swap the suffixes (making the server a 'characterised' noun or the sufferer an agent), violating the chapter's -क-for-agent, -इन्-for-characterised system.

34. (C) चिकित्सकः agent -क ('one who heals'). रोगिन् -इन् marks one CHARACTERISED by रोग. यन्त्रवत् -वत् here = 'like' (manner of tireless action), NOT 'having'. मानवीयः -ईय = 'befitting/pertaining to a human'. Every distractor scrambles these — most dangerously by giving -वत् its 'possessive/having' sense (wrong here) or making -इन् an agent. Only the correct row keeps each suffix in its chapter role.

35. (B) -वत् has two senses: 'like/इव' (manner) and 'possessing/having'. यन्त्रवत् is the 'like' sense. गुणवत् ('possessing virtues') uses the OTHER, possessive sense, so it does not parallel यन्त्रवत्. वायुवत्, अग्निवत्, मेघवत् all mean 'like X' — the same manner sense as यन्त्रवत् — so they ARE good parallels. The question asks for the odd one out, which is the possessive गुणवत्.

36. (C) यन्त्रवत् is an adverb 'like a machine' (manner of tireless service); -वत् here is 'like', not a marker turning यन्त्र into a served object. To actually 'serve the machine' you would need the accusative यन्त्रम्. So the rendering both mistranslates -वत् and invents a non-existent object. The first distractor's verb 'fix' is wrong (सेवते is correct आत्मनेपद). The second wrongly gives -वत् the possessive sense and makes सेवते passive. 'No errors' endorses the mistranslation.

37. (C) A simile imports only the relevant point of comparison. यन्त्रवत् borrows the machine's tireless, steady, never-flagging action — NOT its coldness. The chapter pairs that stamina with मानवीयाः गुणाः (warmth/compassion), so the ideal is machine-like in endurance and human in heart; no contradiction. The critic mistakes a partial simile for a total identity. यन्त्रवत् never means 'cold indifference' here, and मानवीयाः गुणाः is not abandoned — both are explicitly held together.

38. (B) यन्त्रवत् = tireless, steady, repetitive action like a machine. The relief worker ladling for ten hours without flagging captures exactly that stamina. Owning a computer mistakes -वत् for the possessive 'having a machine'. Treating people coldly imports the machine's indifference, which the chapter does not borrow. A robot-staffed factory literalises

'machine' rather than using it as a simile for human tirelessness. Only the steady, untiring server fits.

39. (A) यन्त्री = यन्त्रिन्, an इन्-stem, which carries the possessive/characterising sense: 'one having/operating a machine' (a machinist). That is quite different from यन्त्रवत् ('like a machine', the tireless-manner simile). So swapping in यन्त्री would shift from a simile of stamina to a literal 'machine-owner', changing the praise entirely. It does not mean 'like' (-वत्'s job), is not the -ईय 'befitting' sense, and is active in sense, not passive.

40. (B) पदवी = the post/rank one holds ('Chief of Surgery'); उपाधि: = the qualification one earns by study (the M.D.). So (i)=पदवी, (ii)=उपाधि:. The chapter ranks सेवा above both these outward distinctions. The first distractor swaps the two definitions; the second collapses both into उपाधि: and inverts the ranking; the third collapses both into पदवी and falsely equalises post with service. Only the correct mapping plus 'service above both' fits.

41. (A) The chapter targets the PURSUIT — making titles one's aim — not their mere possession. One can hold an उपाधि: and a पदवी while refusing to chase them, valuing सेवा instead. So 'he had neither' over-reads renunciation-of-pursuit into renunciation-of-possession. The other two distractors swap the definitions (उपाधि: is the degree, पदवी the post) and so misidentify what he supposedly kept or lost.

42. (D) The correct sentence ranks सेवा above both and defines उपाधि: (degree earned) and पदवी (post held) accurately. The first distractor inverts the ranking AND mis-defines उपाधि: as 'a post earned by study' (it is a qualification, not a post). The second inverts the ranking AND mis-defines पदवी as 'a degree held in office' (it is a post, not a degree). The third flattens the chapter's hierarchy into equality, contradicting परम:.

43. (C) The chapter ranks सेवा and मानवीया: गुणा: above उपाधि:/पदवी; the advert flips this, treating credentials/rank as essential and humane qualities as optional — a direct inversion. The chapter does NOT prize उपाधि:/पदवी most (it ranks them below service), so the first option is false. पदवी IS discussed in the chapter, so the second is false. And धनम् is not crowned highest — सेवा is — so the third is false.

44. (B) पदवी = post/rank held; उपाधि: = qualification earned — the correct pairing. The first distractor swaps उपाधि: to 'post' and absurdly makes पदवी a decoction. The second gives यन्त्रवत् the possessive sense ('has a machine'), but here -वत् means 'like'. The third claims कषाय is disambiguated by gender, whereas it is fixed by CONTEXT (medical scene vs taste discussion). Only the पदवी/उपाधि: statement holds.

45. (C) Context, not gender or number, fixes कषाय. In (1) a वैद्य makes a रोगिन् drink it — a medical scene, so 'decoction/medicine'. In (2) it is a रस: ('taste') in a fruit — a taste discussion, so 'astringent'. Hence (1)=decoction, (2)=astringent taste. The reversed option mixes up the cues. The two 'always one sense' options deny the very context-flip the chapter teaches: कषाय genuinely has both senses.

46. (C) The chapter is explicit that कषाय flips between decoction and astringent-taste purely by CONTEXT — a medical scene vs a taste discussion — never by gender or number. So pinning the meaning to a gender ending is a false shortcut. Both the 'neuter=medicine' rule and its reversal invent a gender-based distinction. The 'by number' option likewise contradicts the context-only principle. Context is the only reliable cue.

47. (D) The inference 'his service is concrete' rests on the assumption that a hands-on, in-person act of care (brewing the medicine) IS enacted service, not just sentiment or remote giving — which is exactly सेवा's defining mark (time, body, presence). Reading कषायम् as 'astringent taste' breaks the medical scene entirely. Tying it to earning an उपाधि: contradicts the chapter's renunciation of title-chasing. And delegating to an assistant would REMOVE the personal hands-on element the argument depends on.

48. (A) सेवा requires the giver's own time, body and presence; here goods are merely transferred at a distance with no one present to serve — the signature of दान. That the goods happen to be medicines does not convert दान into सेवा; the boundary is presence, not the kind of help. So it is not सेवा (no presence), not 'both' (presence is wholly absent), and not 'neither' (giving goods at a distance is precisely दान).

49. (C) P gives time, body and presence — सेवा; Q transfers resources from afar — दान. The chapter ranks सेवा (the more personal, costly self-giving) above दान, so P is crowned. Calling Q's money सेवा confuses transfer-at-a-distance with presence. 'Both सेवा' ignores that Q is never present. 'Both दान' wrongly recasts P's hands-on nightly care as mere giving — it is the very model of सेवा.

50. (B) The defining ingredient of सेवा is personal presence (time + body). Money is not part of that definition, so attaching it changes nothing essential; but strip away presence and only the resource-transfer remains, which is दान. Hence presence is necessary and sufficient to keep it सेवा. Money is not 'tainted' (the chapter honours दान too), it is not legally required for सेवा, and दान is the LOWER, not higher, category in this ranking.

51. (D) Two faults: (1) labelling a cheque-writer (दान, giving at a distance) a 'servant' (सेवा, requiring presence) — a category swap; (2) treating the biggest gift as the supreme deed, when the chapter ranks personal service above giving regardless of amount. The 'only wording' option denies both errors. दान is not condemned as immoral. And a cheque is not सेवा at all, so 'rank one cheque below another' misses the boundary entirely.

52. (D) चिकित्सकः is the -क agent; रोगिन् is the -इन् characterised noun; यन्त्रवत् is the -वत् 'like'; मानवीय is the -ईय 'befitting'. Each distractor permutes these incorrectly — e.g. assigning -क to रोगिन् (which is -इन्) or -वत् to चिकित्सकः (which is -क). Only the first row keeps every suffix with its true exemplar, the core of the chapter's word-building system.

53. (B) In this chapter यन्त्रवत् uses -वत् in its 'like/इव' sense — 'like a machine' (tireless), NOT the possessive 'having a machine'. So that pair is the wrong one. उपाधि: (degree), रोगिन्

(the sick, characterised by रोग), and मानवीया: (humane) are all correctly glossed. The trap is the dual sense of -वत्; only here it must be 'like'.

54. (C) Defect 1: सेव् is आत्मनेपदी, so सेवति (परस्मैपद) must be सेवते. Defect 2: यन्त्रवान् is the possessive 'having a machine'; the chapter's word is यन्त्रवत् ('like a machine', tireless) — a sense error. Defect 3 (thematic): the doctor renounces the pursuit of उपाधि:, so 'and he gains a degree' as praise contradicts the message. That is three distinct defects. 'Zero/one/two' all under-count, and the claim that यन्त्रवान् is fine endorses the possessive misreading.

55. (B) The correct sentence: 'ranks highest' = परमः as rank; 'in person rather than a distant gift' = सेवा over दान; 'tirelessly like a machine' = यन्त्रवत् as simile; 'more than any degree' uses उपाधि: rightly. Distractor one fails परमः ('first of the morning') and सेवा ('sent as money'). Distractor two crowns the degree (inverts the ranking) and reads यन्त्रवत् as coldness. Distractor three turns सेवा into money and यन्त्रवत् into machine-OWNERSHIP, and makes a post the goal. Only the first satisfies all four.

56. (B) The chain equivocates on 'highest': परमो धर्मः ranks DUTIES and puts सेवा at the top; the conclusion silently shifts 'highest' to the doctor's POST (पदवी) — a different scale the chapter explicitly subordinates to service. So holding a top post does not equal performing the highest duty. The chain does not misread परमः as temporal (it keeps 'rank'), so that diagnosis is wrong; and सेवा is precisely a duty (the highest), refuting the last option.

57. (B) उपाधि: and पदवी are things one HAS (a degree, a post). सेवा is what one DOES, expressed in acts like brewing कषायम् with मानवीया: गुणाः. So preparing कषायम् belongs on the DOES side as enacted care. The first distractor puts service on the HAS side (it is an activity) and the degree/post on the DOES side (they are possessions) — fully inverted. The second mislabels उपाधि:/पदवी as 'work'. The third treats सेवा as merely 'had'. Only the correct row sorts them right.

58. (D) The chapter's whole point ranks सेवा (presence) above दान (distant giving). So naming दान the परमो धर्मः would crown the LOWER of the two, contradicting the chapter's value-order — the substantive objection. दानम् can grammatically fill a subject slot (it is a neuter noun, not a verb), so the 'impossible to form' and 'is a verb' objections are false. And दान is NOT a synonym of सेवा (presence vs distant giving), so 'merely redundant' is wrong too.

59. (A) The chapter's ideal welds यन्त्रवत् (tireless steadiness) to मानवीया: गुणाः (humane warmth). A supplies stamina but not warmth; B supplies warmth but not stamina — each is half the ideal. So the ideal needs both together. A alone fails (harshness violates मानवीया: गुणा:); B alone fails (quitting violates यन्त्रवत्); and 'neither relevant' contradicts the chapter, which prizes both qualities precisely.

60. (A) The faithful unpacking keeps सेवा as the subject, हि as 'verily', परमः as 'highest rank', धर्मः as 'duty', and grounds it in the doctor who renounces title-pursuit, serves in person (सेवा over दान), and combines यन्त्रवत् stamina with मानवीयाः warmth. Distractor one inverts the thesis to crown the degree. Distractor two reintroduces the परमः='first in time' error. Distractor three substitutes दान (distant funding) for सेवा, contradicting the chapter's ranking. Only the first captures every element correctly.
