

Olympiad Test Paper — Sanskrit (Class 7) — Paper 3

Chapter 9: अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani)

Paper 3 — (progressively harder)

Subject	Sanskrit (NCERT Class 7, Deepakam)
Chapter	9 — अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani)
Total Questions	60 (Multiple Choice, single correct)
Maximum Marks	240
Suggested Time	90 minutes

Marking scheme: +4 for each correct answer · -1 for each wrong answer · 0 if unattempted.

Instructions: Each question has four options (A), (B), (C), (D); exactly one is correct.

Watch the Paper-3 traps: in अन्नाद्भवन्ति the त् of the ablative अन्नात् voices to द् before भू (consonant-sandhi), so अन्नाद् is still पञ्चमी ('from food'), not a new case; the FULL Gita 3.14 chain runs भूतानि←अन्न←पर्जन्य←यज्ञ←कर्म, so 'X comes from Y' means Y is the ablative source; जानीयात् is विधिलिङ् (optative, 'should know') of ज्ञा, not past/future/command, while भवन्ति is plain present of भू; ज्ञेयः is a gerundive ('to be known'), distinct from the past participle ज्ञात ('known'); ब्रह्म (neuter, the Absolute) ≠ ब्रह्मा (masc., creator-god) ≠ ब्रह्मन् (priest); ओषधीनाम् is genitive plural ('of herbs') of the ई-stem ओषधि; and रसायन is an old Ayurvedic word re-coined for modern chemistry. Do not write on this paper — mark answers on your answer sheet.

1. Gita 3.14 gives the full chain: अन्नाद्भवन्ति भूतानि, पर्जन्यादन्नसम्भवः, यज्ञाद्भवति पर्जन्यः, यज्ञः कर्मसमुद्भवः. Reading it as a wheel, which single quantity is BOTH a product of one link AND the source of another?

- (A) भूतानि (beings) — they are the source of कर्म and the product of अन्न
- (B) पर्जन्य (rain) — it arises from यज्ञ and is itself the source of अन्न
- (C) कर्म (action) — it is the product of यज्ञ and the source of भूतानि
- (D) अन्न (food) — it is the source of पर्जन्य and the product of यज्ञ

2. In पर्जन्यादन्नसम्भवः, the form पर्जन्यात् is the ablative of पर्जन्य. The line therefore means:

- (A) the arising of food (is) from rain — i.e. food comes from rain
- (B) the arising of rain (is) from food — i.e. rain comes from food
- (C) rain and food arise together at the same instant
- (D) food destroys the rain that produced it

3. यज्ञः कर्मसमुद्भवः literally analyses as यज्ञः (nominative) + कर्म-समुद्भवः ('having action as its origin'). Its sense in the chain is:

- (A) action has yajna as its source — action arises from yajna
- (B) yajna and action are two names for the same thing
- (C) yajna has action as its source — yajna arises from action
- (D) yajna destroys action once performed

4. A student writes the chain as कर्म → भूत → पर्जन्य → अन्न → यज्ञ. Compared with Gita 3.14, the error is that:

- (A) भूतानि (the final product) and यज्ञ have been swapped — the true tail is ...→अन्न→भूतानि and the true head is कर्म→यज्ञ→...
- (B) the chain should start from अन्न, not कर्म
- (C) पर्जन्य and अन्न are in the wrong order; rain should come from food
- (D) the chain is entirely correct as written

5. If yajna (selfless action) ceased entirely, the Gita-3.14 chain predicts the FIRST link to fail would be:

- (A) beings (भूतानि), since beings are mentioned first in the verse
- (B) food (अन्न), since food is what humans eat
- (C) action (कर्म), since action is the source of yajna
- (D) rain (पर्जन्य), since rain is what yajna directly produces

6. The verse uses भवन्ति (for भूतानि) and सम्भवः/समुद्भवः (for rain and yajna). All three share the root भू. This repeated root underlines that the chain is one of:

- (A) destruction — each link consumes its source
- (B) naming — each link is just another word for भू
- (C) counting — each link adds one to a total
- (D) coming-into-being — each link 'becomes' from its source

7. Reading Gita 3.14 in reverse (cause back to root), the order is भूतानि come from अन्न, अन्न from पर्जन्य, पर्जन्य from यज्ञ, यज्ञ from कर्म. The ULTIMATE root on which the whole chain rests is therefore:

- (A) भूतानि (beings) — they begin the verse, so they are the root
- (B) कर्म (action) — the head of the chain, on which yajna and all that follows depend
- (C) अन्न (food) — being central, it is the root of everything
- (D) पर्जन्य (rain) — it nourishes everything, so it is the root

8. Because every link in Gita 3.14 is joined by an ablative ('from X'), the philosophical point the verse makes is best stated as:

- (A) self-sufficiency — each thing produces itself
- (B) hierarchy of command — higher links order the lower ones
- (C) random chance — links arise with no connection
- (D) mutual dependence — nothing in the cycle stands alone; each rests on another

9. In the phrase अन्नाद् भवन्ति भूतानि, which word is the grammatical SUBJECT (kartā) of the verb भवन्ति?

- (A) अन्नाद् — because it begins the sentence
- (B) भवन्ति — because it is the most important word
- (C) भूतानि — the nominative plural that agrees with the plural verb भवन्ति
- (D) अन्न — the source from which everything comes

10. In अन्नात् + भवन्ति → अन्नाद्भवन्ति, the त् becomes द्. By the SAME rule, जगत् + भवति would become:

- (A) जगद्भवति — the त् voices to द् before the voiced भ्
- (B) जगत्भवति — no change, because both words keep their own sounds
- (C) जगत्भवति — the त् becomes the aspirate थ् (D) जगन्भवति — the त् becomes the nasal न्

11. The sandhi अन्नात् + भवन्ति → अन्नाद्भवन्ति is triggered by भ् being a VOICED sound. Which of these following sounds would NOT trigger the त्→द् change?

- (A) त् (as in तत्र) — t is unvoiced, so त् stays त् (B) ग् (as in गच्छति) — g is voiced
- (C) द् (as in ददाति) — d is voiced (D) ज् (as in जायते) — j is voiced

12. Knowing that अन्नाद् in अन्नाद्भवन्ति is the sandhi-altered ablative अन्नात्, what is the ablative singular of the word वृक्ष ('tree') before it would similarly voice in वृक्ष___ + भवति?

- (A) वृक्षम् → वृक्षम्भवति (B) वृक्षस्य → वृक्षस्यभवति
- (C) वृक्षे → वृक्षेभवति (D) वृक्षात् → वृक्षाद्भवति

13. After the sandhi अन्नाद्भवन्ति is undone, the two original words are recovered as:

- (A) अन्नाद् + भवन्ति (with द् as the real ending) (B) अन्नात् + भवन्ति
- (C) अन्न + अद्भवन्ति (D) अन्नात् + भवन्ति (with a short final a)

14. Which statement about the sandhi in अन्नाद्भवन्ति is FALSE?

- (A) The त् of अन्नात् becomes the voiced द्
- (B) The sandhi changes अन्नात् from the ablative case into the nominative case
- (C) The change happens because the next sound भ् is voiced
- (D) The word remains in the ablative ('from food') after the sandhi

15. By the voicing rule seen in अन्नाद्भवन्ति, the pair सत् + भावः would join as:

- (A) सत्भावः — the words simply stand side by side unchanged
- (B) सद्भावः ('good-being / goodwill') — त् voices to द् before भ्
- (C) सन्भावः — the त् becomes the nasal न् (D) सच्भावः — the त् becomes च्

16. Sanskrit ablatives say a thing 'arises FROM' its source, not that it is 'MADE BY' a maker. Applied to अन्नाद् भवन्ति भूतानि, the best gloss is:

- (A) food manufactures beings the way a potter makes a pot
- (B) beings own their food as property (C) food is given to beings as a gift
- (D) beings come to be out of food (food is the source they emerge from)

17. In Sanskrit, 'he comes from the village' is ग्रामात् आगच्छति. By the same case-logic, the अन्नात् in अन्नाद् भवन्ति भूतानि is best compared to:

- (A) ग्रामम् (accusative) — both mark the goal one moves toward
- (B) ग्रामे (locative) — both mark the place where one stays
- (C) ग्रामात् — both are ablatives marking the point of origin
- (D) ग्रामस्य (genitive) — both mark possession

18. A pupil renders अन्नात् as 'for food' and concludes the verse means beings exist 'for the sake of food'. The flaw is that:

- (A) 'for food' is correct, and the verse really is about beings existing to feed food
- (B) 'for/for-the-sake-of' is the dative (अन्नाय); अन्नात् is ablative ('from food'), so beings arise FROM food
- (C) अन्नात् is genitive, so it should be 'of food'
- (D) अन्नात् is accusative, so it should be 'food' as the object

19. Which sentence correctly uses an ablative to express 'leaves fall from the tree', on the model of अन्नाद् भवन्ति?

- (A) वृक्षात् पत्राणि पतन्ति
- (B) वृक्षम् पत्राणि पतन्ति
- (C) वृक्षे पत्राणि पतन्ति
- (D) वृक्षाय पत्राणि पतन्ति

20. The ablative 'source not maker' idea means the verse avoids implying a personal creator at the food-link. This fits the chapter's framing of the cycle as resting on:

- (A) ब्रह्मा, the personal creator-god who builds beings
- (B) a human priest who performs the making
- (C) pure random chance with no underlying ground
- (D) ब्रह्म, the impersonal all-pervading Power — not a personal manufacturer

21. भूतानि is the nominative/accusative plural of the neuter noun भूत. भूत is itself the past passive participle of भू and literally means:

- (A) '(that which) will become' — a future form
- (B) '(that which) destroys' — from a root meaning to break
- (C) '(that which) is feared' — from a root meaning to fear
- (D) '(that which) has become / has come to be' — hence 'a being'

22. In the SAME verse, both भवन्ति and भूतानि derive from भू. The difference between them is that:

- (A) भवन्ति is a present-tense verb ('they come to be'); भूतानि is a noun ('beings') from the past participle
- (B) both are verbs, one present and one past
- (C) both are nouns, one singular and one plural
- (D) भवन्ति is the noun and भूतानि is the verb

23. A reader insists भूतानि must mean 'ghosts' because भूत means ghost in Hindi. The decisive reason this is wrong HERE is:

- (A) the plural ending -आनि forces the meaning 'ghosts'
- (B) Sanskrit भूत can never mean anything related to ghosts
- (C) context — in a Gita verse about the cycle of life, भूतानि means 'living beings'; the Hindi 'ghost' sense does not fit
- (D) the word is feminine, so it must mean 'beings'

24. Because भूतानि (from भू) covers EVERY living thing, the verse's claim 'from food beings arise' must include:

- (A) only human beings
- (B) humans, animals AND plants alike
- (C) only animals, since plants do not eat
- (D) only the souls of the dead

25. Which form is the correct accusative-plural 'beings' (as in 'the verse describes the beings') of भूत, matching the neuter pattern of भूतानि?

- (A) भूतानि — neuter nouns have identical nominative and accusative plural
- (B) भूतान् — the masculine accusative-plural ending
- (C) भूताः — the masculine nominative-plural ending
- (D) भूतेन — the singular instrumental ending

26. The chapter distinguishes three look-alike words. Which row pairs each form with its CORRECT gender and meaning?

- (A) ब्रह्म = masculine, a priest; ब्रह्मा = neuter, the Absolute; ब्रह्मन् = the creator-god
- (B) ब्रह्म = the creator-god; ब्रह्मा = a priest; ब्रह्मन् = neuter Absolute
- (C) all three are neuter and mean the Absolute
- (D) ब्रह्म = neuter, the all-pervading Absolute; ब्रह्मा = masculine, the creator-god; ब्रह्मन् = a priest

27. The chapter glosses ब्रह्म as सर्वव्याप्तः परमेश्वरः. The word सर्वव्याप्तः most precisely conveys that ब्रह्म is:

- (A) all-powerful — able to do anything
- (B) all-knowing — aware of everything
- (C) all-merciful — kind to everyone
- (D) all-pervading — present everywhere, in everything

28. Why does the chapter say the cycle of food, rain and yajna ultimately 'rests in' ब्रह्म rather than in ब्रह्मा?

- (A) because ब्रह्म is the impersonal ground pervading the whole cycle, while ब्रह्मा would name a single personal creator-figure
- (B) because ब्रह्मा is feminine and cannot ground a cycle
- (C) because ब्रह्मा means a priest who only performs yajna
- (D) because ब्रह्म and ब्रह्मा are the same word with no difference

29. Which sentence-completion correctly uses the right 'Brahma' word? 'The fire-ritual was conducted by the _____, who chanted the mantras.'

- (A) ब्रह्म (the neuter Absolute) (B) ब्रह्मा (the creator-god)
(C) ब्रह्मन् (priest) (D) रसायन (chemistry)

30. The neuter gender of ब्रह्म (the Absolute) is itself meaningful because it signals that ब्रह्म is:

- (A) weaker than the masculine ब्रह्मा
(B) beyond personal 'he/she' categories — an impersonal principle, not a gendered being
(C) an inanimate object like a stone (D) grammatically plural, i.e. many gods

31. जानीयात् is the 3rd-singular optative (विधिलिङ्) of ज्ञा. Which feature of its FORM signals the optative rather than the present जानाति?

- (A) the initial जा-, which only the optative has
(B) the final -त्, which only the optative has
(C) the -ईय- element before the ending (जानीयात्), absent in the present जानाति
(D) the absence of any prefix, unlike the present

32. The chapter glosses जानीयात् as अवगच्छेत्. The fact that the gloss is ALSO an optative (अवगच्छेत्) tells us the gloss was chosen to preserve:

- (A) the mood — 'should know' is explained by another 'should' form, 'should understand'
(B) the tense — both are past-tense forms (C) the number — both are plural
(D) the voice — both are passive

33. Which sentence uses the optative correctly to mean 'a student should know the order of creation', echoing जानीयात्?

- (A) छात्रः उत्पत्तिक्रमं जानाति (a plain present statement)
(B) छात्रः उत्पत्तिक्रमं जानीयात्
(C) छात्रः उत्पत्तिक्रमं अजानात् (a past-tense statement)
(D) छात्रः उत्पत्तिक्रमं ज्ञास्यति (a future-tense statement)

34. Sanskrit forms advice with the optative: सत्यं वदेत् ('one should speak truth'), धर्मं चरेत् ('one should follow dharma'). By the same pattern, 'one should know' is जानीयात्. This shows the optative is used for:

- (A) reporting completed past events (B) narrating what is happening right now
(C) moral counsel and rules — what one OUGHT to do
(D) issuing a sharp direct command like 'know!'

35. How does the optative जानीयात् differ in force from the imperative जानीहि?

- (A) जानीयात् is a command and जानीहि is mild advice
(B) जानीयात् gently advises 'one should know'; जानीहि directly commands 'know!'

(C) they are identical in both form and force

(D) जानीयात् is past tense and जानीहि is present tense

36. जानीयात्, जानाति and ज्ञास्यति all come from ज्ञा. Match each to its mood/tense correctly:

(A) जानीयात् = present; जानाति = past; ज्ञास्यति = optative

(B) जानीयात् = future; जानाति = optative; ज्ञास्यति = present

(C) जानीयात् = optative ('should know'); जानाति = present ('knows'); ज्ञास्यति = future ('will know')

(D) all three are the optative of ज्ञा

37. ज्ञेयः is the gerundive of ज्ञा and means 'to be known / should be known'. It is built on a base related to which other ज्ञा-form?

(A) जानाति ('knows', the present) — ज्ञेय is just its plural

(B) जिज्ञासा ('wish to know') — ज्ञेय is its negative

(C) ज्ञात ('known', the past participle) — ज्ञेय is its 'to-be-X-ed' counterpart

(D) अजानात् ('knew') — ज्ञेय is its future

38. By the analogy कृत ('done') → कार्य ('to be done'), the parallel for ज्ञात ('known') is:

(A) ज्ञानम् ('knowledge', a noun)

(B) ज्ञेय ('to be known')

(C) ज्ञाता ('a knower', an agent noun)

(D) ज्ञात्वा ('having known', a gerund)

39. Which sentence uses ज्ञेयः with its correct gerundive sense?

(A) सः उत्पत्तिक्रमं ज्ञेयः — 'he knew the order of creation'

(B) उत्पत्तिक्रमः ज्ञेयः अस्ति इति सः जानाति न — 'he does not have knowledge'

(C) उत्पत्तिक्रमः सर्वैः ज्ञेयः — 'the order of creation is to be known by all'

(D) ज्ञेयः नाम कश्चित् बालकः आसीत् — 'there was a boy named Jneya'

40. The gerundive ज्ञेयः differs from the present participle जानन् ('knowing / one who knows') because ज्ञेयः is:

(A) active and present — 'one who is knowing', focusing on the doer

(B) past and completed — 'one who already knew'

(C) future and certain — 'one who will surely know'

(D) passive and prescriptive — 'that which is TO BE known', focusing on the object

41. If one wanted to say 'the cycle of creation should be understood (by the student)', which gerundive-style construction parallels उत्पत्तिक्रमः ज्ञेयः most closely?

(A) उत्पत्तिक्रमं बुध्यते — a present middle verb ('understands')

(B) उत्पत्तिक्रमः बोद्धव्यः — using the -तव्य gerundive ('to be understood')

(C) उत्पत्तिक्रमं अबुध्यत — a past verb ('understood')

(D) उत्पत्तिक्रमस्य बोधः — a noun ('understanding of the cycle')

42. The chapter contrasts यज्ञ and पूजा. In Gita 3.14, यज्ञ is taken in its BROADEST sense, which is:

- (A) image-based devotional worship in a temple
- (B) the modern science of chemistry
- (C) selfless, well-directed action (कर्म offered without selfish motive), of which fire-ritual is one form
- (D) any meal eaten as a religious duty

43. If the verse's chain had no यज्ञ step — just कर्म → पर्जन्य → अन्न → भूतानि — the deepest change in meaning would be:

- (A) the chain would simply be shorter but mean exactly the same thing
- (B) rain would now come from food instead of action
- (C) any action at all would seem to produce rain, losing the verse's point that it is SELFLESS action (yajna) that sustains the cycle
- (D) beings would no longer depend on food

44. Which best states the difference between यज्ञ and पूजा the chapter draws?

- (A) यज्ञ is silent and पूजा is always sung
- (B) यज्ञ is done by women and पूजा by men
- (C) they differ only in spelling, not in meaning
- (D) यज्ञ is a Vedic fire-offering ritual; पूजा is devotional worship, often image-based — two different ritual traditions

45. A pupil says 'यज्ञ and पूजा are the same, just different words.' The best correction is:

- (A) they are indeed identical in every respect
- (B) यज्ञ means chemistry and पूजा means a herb
- (C) यज्ञ is a verb and पूजा is a noun, so they cannot be compared
- (D) they overlap as worship but differ in tradition — यज्ञ centres on a fire-offering, पूजा on devotional (often image-based) worship

46. ओषधीनाम् is the genitive plural of ओषधि. In the sentence 'rain helps the growth OF herbs', ओषधीनाम् would translate as:

- (A) 'of (the) herbs' — the genitive marking possession/relation
- (B) 'from herbs' — an ablative of source
- (C) 'to herbs' — a dative of recipient
- (D) 'by herbs' — an instrumental of means

47. ओषधीनाम् ends in -ईनाम्. This identifies ओषधि as which kind of stem, and the case as which?

- (A) an a-stem masculine noun; the case is ablative singular
- (B) an ī/i-stem feminine noun; the case is genitive plural
- (C) a consonant-stem neuter noun; the case is nominative plural
- (D) an u-stem noun; the case is accusative singular

48. उत्पत्तिक्रमम् is the OBJECT of जानीयात् ('one should know the order of creation'). Its accusative-singular ending tells us its grammatical role is:

- (A) the कर्ता (subject) — the one who knows
- (B) the करण (instrument) — the means of knowing
- (C) the अपादान (source) — that from which knowing comes
- (D) the कर्म (direct object) — the thing that is to be known

49. उत्पत्तिक्रमम् analyses as उत्पत्ति + क्रम. Given उत्पत्ति = 'arising/origination' and क्रम = 'order/sequence', the compound means:

- (A) 'the destruction of order' — the breakdown of sequence
- (B) 'the order/sequence of arising' — the step-by-step way things come to be
- (C) 'a single act of arising' — one origination only
- (D) 'a sequence with no origin' — order without a beginning

50. Where does ओषधि (herbs) most naturally fit in the life-cycle the chapter describes?

- (A) as the source of yajna, replacing action
- (B) as a synonym for ब्रह्म, the Absolute
- (C) as the modern science of chemistry
- (D) as a link between rain and food/beings — rain nourishes herbs/plants, which become food

51. रसायनशास्त्रम् analyses as रसायन + शास्त्रम्. The element शास्त्रम् contributes the meaning:

- (A) 'science / systematic discipline / treatise'
- (B) 'a herb or medicinal plant'
- (C) 'a fire-ritual'
- (D) 'the all-pervading Absolute'

52. The chapter notes रसायन once named Ayurvedic rejuvenation tonics but now names chemistry. The deeper point this illustrates about Sanskrit is:

- (A) Sanskrit has no original scientific vocabulary and must borrow from English
- (B) the old and new meanings of रसायन are unrelated coincidences
- (C) it is a living language able to re-coin old roots for new ideas, like English borrowing Greek/Latin for science
- (D) chemistry was already a fully developed science in ancient India

53. Which pair of meanings for रसायनशास्त्रम् and शास्त्रम् is BOTH correct?

- (A) रसायनशास्त्रम् = chemistry; शास्त्रम् = science/treatise
- (B) रसायनशास्त्रम् = astronomy; शास्त्रम् = a herb
- (C) रसायनशास्त्रम् = grammar; शास्त्रम् = a ritual
- (D) रसायनशास्त्रम् = medicine only; शास्त्रम् = the Absolute

54. जिज्ञासा, जानीयात् and ज्ञेयः all spring from ज्ञा. Which describes their relationship correctly?

- (A) जिज्ञासा = the WISH to know (desiderative noun); जानीयात् = one SHOULD know (optative); ज्ञेयः = (that which is) TO BE known (gerundive)
- (B) all three are simple present-tense verbs of ज्ञा
- (C) जिज्ञासा is a command, जानीयात् a noun, ज्ञेयः a past tense
- (D) they come from three different roots that only look alike

55. The chapter links जिज्ञासा to जानीयात्. The natural learning-sequence this captures is:

- (A) first one knows everything, then loses the wish to know
- (B) the duty to know (जानीयात्) destroys all curiosity (जिज्ञासा)
- (C) first the WISH to know (जिज्ञासा) sparks inquiry, then one realises one OUGHT to know (जानीयात्) and learns the cycle
- (D) जिज्ञासा and जानीयात् describe two unrelated people

56. A student writes: 'अन्नाद् is nominative, भूतानि means ghosts, and जानीयात् is past tense.' How many of these three claims are wrong?

- (A) all three are wrong
- (B) only one is wrong
- (C) only two are wrong
- (D) none is wrong

57. Put the cycle together: a drought stops the rain. Tracing Gita 3.14 forward, the chapter would predict the LAST link to suffer is:

- (A) पर्जन्य (rain) — it is what the drought directly removes
- (B) यज्ञ (yajna) — the action that produces rain
- (C) भूतानि (beings) — they are at the end of the chain, starving only after food itself fails
- (D) कर्म (action) — the ultimate source at the head of the chain

58. Which single statement correctly combines the verse's grammar AND meaning?

- (A) अन्नाद् (nominative 'food') + भवन्ति (optative 'should be') + भूतानि (ghosts) = 'food should become a ghost'
- (B) अन्नाद् (accusative 'food') + भवन्ति (past 'became') + भूतानि (sacrifices) = 'food became sacrifices'
- (C) अन्नाद् (dative 'for food') + भवन्ति (future 'will be') + भूतानि (herbs) = 'herbs will be for food'
- (D) अन्नाद् (ablative 'from food') + भवन्ति (present 'come to be') + भूतानि (nom. pl. 'beings') = 'from food, beings come to be'

59. The chapter ties the ancient verse to रसायनशास्त्रम् (chemistry). The intended takeaway is that:

- (A) modern chemistry has proved the Gita verse false
- (B) an ancient insight about food and life and a modern science can describe the SAME world from different angles
- (C) the Gita verse is really a chemistry textbook in disguise
- (D) ancient Sanskrit thought and modern science can never meet

60. Summing up the chapter, which statement is the MOST complete and accurate?

- (A) All beings arise from food, food from rain, rain from yajna, yajna from action — an interdependent cycle grounded in the all-pervading ब्रह्म, which a student SHOULD know (जानीयात्)
- (B) Beings make their own food, so the cycle needs no rain, yajna or action
- (C) Ghosts arise from food, and one already knew (past tense) the whole cycle
- (D) Food is the creator-god who personally builds every being from nothing

Solutions — Sanskrit (Class 7), Chapter 9: अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani) — Paper 3

Paper 3 — (progressively harder)

Marking: +4 correct, –1 wrong, 0 unattempted. Maximum marks **240**.

Answer Key

Q	Ans	Q	Ans	Q	Ans	Q	Ans	Q	Ans	Q	Ans
1	B	11	A	21	D	31	C	41	B	51	A
2	A	12	D	22	A	32	A	42	C	52	C

10	A	20	D	30	B	40	D	50	D	60	A

Answer-key distribution: A = 15, B = 15, C = 15, D = 15.

Worked Solutions

1. (B) Trace the four links: भूतानि come from अन्न; अन्न from पर्जन्य; पर्जन्य from यज्ञ; यज्ञ from कर्म. Rain (पर्जन्य) is the product of यज्ञ (यज्ञाद्भवति पर्जन्यः) and at the same time the source of food (पर्जन्यादन्नसम्भवः). So पर्जन्य is genuinely both a product and a source. भूतानि are only an end-product (the verse never makes them a source of कर्म within these four lines). कर्म is the source of यज्ञ, not the product of यज्ञ. अन्न is the source of भूतानि and the product of पर्जन्य — not the source of पर्जन्य. Only rain occupies both roles in the stated chain.

2. (A) पर्जन्यात् is पञ्चमी (ablative), 'from rain', and अन्नसम्भवः is 'the coming-into-being of food'. So पर्जन्यादन्नसम्भवः = 'from rain (comes) the arising of food' — food comes from rain. The ablative marks the source, so the direction is rain → food, never the reverse (that would require अन्नात् ... पर्जन्यसम्भवः). It is a sequence of dependence, not a simultaneous joint arising, and सम्भव means 'coming-to-be', the opposite of destruction.

3. (C) समुद्भव means 'origin / source of arising', and the compound कर्मसमुद्भवः (a बहुव्रीहि describing यज्ञः) means 'whose origin is action'. So यज्ञः कर्मसमुद्भवः = 'yajna has action as its

origin' → yajna arises from action (कर्म → यज्ञ). The reverse direction (action from yajna) inverts the compound. The two are distinct stages of the cycle, not synonyms, and समुद्भव is about origination, not destruction.

4. (A) The true order (head to tail) is कर्म → यज्ञ → पर्जन्य → अन्न → भूतानि. The student's chain कर्म → भूत → पर्जन्य → अन्न → यज्ञ has put भूत where यज्ञ belongs and यज्ञ at the end where भूतानि belong: the two ends are swapped. कर्म is correctly the head (यज्ञः कर्मसमुद्भवः makes action the ultimate source), so it should not start from अन्न. पर्जन्य→अन्न is correct (rain → food), so saying rain should come from food is itself wrong. The chain is not correct as written.

5. (D) In the chain कर्म → यज्ञ → पर्जन्य → अन्न → भूतानि, yajna directly produces पर्जन्य (यज्ञाद्भवति पर्जन्यः). Remove yajna and the immediate next link, rain, fails first; the failure then propagates down to food and beings. Beings and food are downstream effects, so they fail later, not first. कर्म is upstream of यज्ञ (its source), so कर्म is not what fails when यज्ञ stops — it is what stops producing यज्ञ.

6. (D) भवन्ति ('they come to be'), सम्भवः and समुद्भवः ('arising, coming-into-being') are all built on भू ('to be / become'). Their shared sense is that each stage comes-into-being from the previous one — a chain of becoming/arising. It is not destruction (भू is 'be', not 'destroy'), the words are inflected forms with distinct meanings (not mere repetitions of the bare root), and nothing in the root concerns counting.

7. (B) Tracing back from the end: भूतानि←अन्न←पर्जन्य←यज्ञ←कर्म. The chain bottoms out at कर्म (action), which is the source of यज्ञ and thereby of everything downstream — so action is the ultimate root. भूतानि merely appear first in the verse's wording but are the END product, not the root. अन्न and पर्जन्य are mid-chain links, each depending on a further source (rain, then yajna), so neither is the root. The head of the chain is कर्म.

8. (D) An unbroken series of ablatives ('beings from food, food from rain, rain from yajna, yajna from action') makes every member depend on its source. The teaching is interdependence — nothing is self-standing. It is the opposite of self-sufficiency (each thing needs a source). The ablative marks origin, not command, so it is not a chain of orders. And a fixed, ordered chain is precisely not randomness.

9. (C) भवन्ति is 3rd-person plural ('they come to be'), so its subject must be a nominative plural — here भूतानि ('beings'), which agrees in number. अन्नाद् (= अन्नात्) is ablative ('from food'), an adverbial source, not the subject, despite standing first. भवन्ति is the verb itself, not a subject. अन्न is only the stem inside the ablative अन्नात् and is not a free nominative here. The subject is भूतानि.

10. (A) The rule is: a final unvoiced त् becomes the voiced द् before a voiced consonant such as भ्. Applying it to जगत् + भवति gives जगद्भवति, exactly parallel to अन्नात्→अन्नाद् before भ्. No-change (जगत्भवति) ignores the sandhi. Becoming the aspirate थ् is not what voicing does

(थ् is unvoiced-aspirate). Becoming the nasal त् would only happen before a nasal (e.g. before त्/म्), not before भ्.

11. (A) Final त् voices to द् only before a VOICED consonant. त् itself is unvoiced, so before त् the original त् need not voice (e.g. तत् + तत्र → तत्तत्र, no voicing). ग्, द् and ज् are all voiced consonants and WOULD trigger the change (तत्+गच्छति→तद्गच्छति, etc.). The odd one out — the sound that does not trigger voicing — is the unvoiced त्.

12. (D) The ablative singular of the अ-stem वृक्ष is वृक्षात् (just as अन्न → अन्नात्). Before the voiced भ् its त् voices to द्: वृक्षात् + भवति → वृक्षाद्भवति, exactly parallel to अन्नात्→अन्नाद्. वृक्षम् is accusative ('the tree' as object), वृक्षस्य is genitive ('of the tree'), and वृक्षे is locative ('in the tree') — none is the ablative 'from the tree'.

13. (B) Splitting the sandhi reverses the voicing: the द् in अन्नाद् was originally the unvoiced त् of the ablative अन्नात्. So the underlying words are अन्नात् + भवन्ति. The द् is a sandhi product, not the real ending, so 'अन्नाद् + भवन्ति' mis-states the underlying form. There is no word अद्भवन्ति. And the ablative ending is -आत् (long ā), not -अत्, so अन्नात् (short a) is wrong.

14. (B) Sandhi is purely a sound change at word-junctions; it never alters a word's grammatical case. अन्नात् stays ablative ('from food') even after it appears as अन्नाद्. So the claim that the sandhi turns it nominative is FALSE — and is the answer. The other three are all TRUE: त् does voice to द्, the trigger is the voiced भ्, and the ablative meaning is preserved.

15. (B) Final त् before the voiced भ् voices to द्, so सत् + भावः → सद्भावः (a real Sanskrit word meaning goodwill/good-disposition), exactly the rule behind अन्नात्→अन्नाद् before भ्. Leaving it unchanged (सत्भावः) ignores the sandhi; the nasal त् would appear only before a nasal sound; and च् would arise only before palatal च्/छ्, not before भ्.

16. (D) The ablative अन्नात् expresses origin/source: beings emerge OUT OF food. It is dependence, not agency — so the potter-and-pot image (an agent deliberately making) misreads the ablative as if it were an instrumental/agentive construction. Ownership would be genitive (अन्नस्य), and 'giving as a gift' would be a dative (अन्नाय) idea. Only 'emerge out of food as their source' matches the ablative.

17. (C) ग्रामात् in 'comes from the village' is ablative (point of origin); अन्नात् in 'from food beings arise' is likewise ablative (point of origin). They match. ग्रामम् (accusative) marks the destination one goes TO; ग्रामे (locative) marks where one IS; ग्रामस्य (genitive) marks possession ('of the village'). None of these matches the 'from' sense of अन्नात्.

18. (B) 'For / for the sake of' is the dative case, which for अन्न would be अन्नाय. But the verse has अन्नात्, the ablative ('from food'), so the meaning is that beings arise FROM food, not 'for food'. Hence the rendering is wrong. It is not genitive (that would be अन्नस्य, 'of food') nor accusative (अन्नम्, 'food' as object); the form अन्नात् is unmistakably ablative.

19. (A) 'Fall from the tree' needs the ablative of source/separation, वृक्षात् ('from the tree') — exactly the case used in अन्नात्. वृक्षम् is accusative (object/goal), वृक्षे is locative ('in/on the tree'), and वृक्षाय is dative ('for the tree'). Only वृक्षात् gives the 'from' meaning the sentence requires.

20. (D) The ablatives present the cycle as one of impersonal dependence, and the chapter grounds it in ब्रह्म — the neuter, all-pervading Absolute (सर्वव्याप्तः परमेश्वरः), not a personal maker. ब्रह्मा is precisely the personal creator-god the ablative framing avoids invoking. A human priest (ब्रह्मन्) is a ritual officiant, not the cosmic ground. And the chapter presents an ordered cycle, the opposite of random chance.

21. (D) भूत is the past passive participle of भू ('to be/become'), so it literally means 'become / having come to be'; a 'being' is thus 'one that has become'. It is past in sense, not future. It has nothing to do with a root meaning 'destroy'. And though Hindi भूत can mean 'ghost' (a thing feared), the Sanskrit derivation is from भू 'to be', not from भी 'to fear'.

22. (A) भवन्ति is a finite present-tense verb (3rd pl., 'they come to be'); भूतानि is a noun (neuter plural 'beings'), formed from the past participle भूत. So one is a verb and the other a noun, though both share the root भू. They are not both verbs, not both nouns, and the roles are not reversed (भवन्ति is the verb).

23. (C) भूत has two attested uses — 'being/creature' (Vedanta/Gita) and the folk-Hindi 'ghost'; CONTEXT decides which. In a Gita verse about how life arises from food, 'living beings' is the only sensible reading, so 'ghosts' is wrong here. The plural ending -आनि marks number, not which meaning applies. It overstates the case to say भूत can NEVER touch a ghost-sense (folk usage does). And भूत/भूतानि is neuter, not feminine, so the gender argument is also mistaken.

24. (B) भूतानि means all living beings — 'those that have become' — so the verse's claim embraces humans, animals and plants together. Restricting it to humans ignores the universal scope. Excluding plants 'because they don't eat' misreads the verse: plants too depend on food/nourishment in the cycle, and भूतानि includes them. 'Souls of the dead' is the ghost-sense, which the living-cycle context rules out.

25. (A) भूत is neuter, and neuter nouns share one form for nominative and accusative plural: भूतानि. So 'the beings' as object is still भूतानि. भूतान् is the masculine accusative plural (e.g. देवान्), wrong for a neuter. भूताः is the masculine nominative plural. भूतेन is singular instrumental ('by a being'). Only भूतानि fits the neuter accusative plural.

26. (D) The correct mapping is: ब्रह्म (neuter) = the impersonal all-pervading Absolute; ब्रह्मा (masculine) = the personal creator-god; ब्रह्मन् = a priest/Brahmin. The first distractor scrambles all three roles; the second swaps creator-god, priest and Absolute; the fourth wrongly flattens the gender and meaning distinctions the chapter insists on. Only the stated row is right.

27. (D) सर्वव्याप्तः = सर्व ('all') + व्याप्त ('pervaded/spread through'), i.e. 'pervading everything' — present everywhere. That is a statement about PRESENCE (omnipresence), not about power (सर्वशक्तिमान्), not about knowledge (सर्वज्ञ), and not about mercy (सर्वकरुणामय). The gloss highlights ब्रह्म's all-pervasiveness.

28. (A) The cycle is presented as impersonal interdependence grounded in the all-pervading Absolute, ब्रह्म (neuter). ब्रह्मा (masculine) is a specific personal creator-god, which would reframe the cycle as one being's handiwork — not what the chapter intends. ब्रह्मा is masculine, not feminine. A priest is ब्रह्मन्, not ब्रह्मा. And the two words are emphatically distinct, not identical.

29. (C) The one who conducts a ritual and chants is the priest — ब्रह्मन्. The neuter ब्रह्म is the impersonal Absolute, not a ritual officiant. ब्रह्मा is the creator-god, not a working priest. रसायन means chemistry and is irrelevant. Only ब्रह्मन् fits 'the priest who chanted'.

30. (B) Sanskrit neuter here marks ब्रह्म as beyond the personal he/she of masculine/feminine — an impersonal, all-pervading principle. Neuter does not mean 'weaker' (grammatical gender is not strength). It does not reduce ब्रह्म to a lifeless object; ब्रह्म is the conscious all-pervading power (चेतनशक्तिः). Nor is it plural — ब्रह्म is one Absolute, singular in number.

31. (C) The optative is marked by an -ई/-ईय- sign before the personal ending: ज्ञा's stem जानी- plus the optative gives जानीयात्, whereas the present is जानाति (stem जाना- + -ति). So the tell-tale of the optative is the -ईय- element. The initial जा- comes from the same stem and appears in both forms. A final -त् also appears in many present 3rd-singular forms (e.g. अभवत् etc.) and is not unique to the optative. Neither form takes a prefix, so 'absence of a prefix' distinguishes nothing.

32. (A) अवगच्छेत् is the optative of अव+गम् ('should understand'), the same mood as जानीयात् ('should know'). The gloss therefore preserves the MOOD (the 'should/ought' sense). Both are optatives, not past tenses. Both are 3rd-person SINGULAR, not plural. And both are active, not passive. The deliberate match is mood-to-mood.

33. (B) 'Should know' needs the optative जानीयात्, giving छात्रः उत्पत्तिक्रमं जानीयात् ('the student should know the order of creation'). जानाति is the plain present ('knows'), अजानात् is past ('knew'), and ज्ञास्यति is future ('will know') — none expresses the 'should/ought' advice that जानीयात् carries.

34. (C) वदेत्, चरेत्, जानीयात् are all optatives giving advice/rules ('should speak', 'should follow', 'should know') — moral counsel about what one OUGHT to do. The optative does not report past events (that is past tense), does not narrate the present moment (present tense), and is gentler than a blunt command: a direct 'know!' is the imperative जानीहि / जानीतु, not the optative.

35. (B) The optative जानीयात् expresses gentle advice/obligation ('one should know'), while the imperative जानीहि is a direct order ('know!'). So the optative is the softer of the two — the distractor that reverses them is wrong. The forms differ (-ईयात् vs -ईहि) and the forces differ, so they are not identical. Neither is past tense; both concern what should/must be done, not what happened.

36. (C) जानीयात् (with the -ईय- optative sign) = 'should know'; जानाति (present stem जाना- + -ति) = 'knows'; ज्ञास्यति (with the future -स्य-) = 'will know'. The first distractor and the second both misassign the moods/tenses; the third wrongly makes all three optatives, ignoring the distinct present and future markers. Only the stated triple is correct.

37. (C) The gerundive ज्ञेय ('to be known') stands beside the past participle ज्ञात ('known') exactly as कार्य ('to be done') stands beside कृत ('done'). The -य suffix turns 'X-ed' into 'to-be-X-ed'. It is not a plural of the present जानाति, not a negative of जिज्ञासा, and not a future of अजानात्. The right counterpart is the participle ज्ञात.

38. (B) The gerundive pattern turns a past participle into a 'to-be-X-ed' word: कृत→कार्य, so ज्ञात→ज्ञेय ('to be known'). ज्ञानम् is the abstract noun 'knowledge'. ज्ञाता is the agent noun 'a knower / one who knows'. ज्ञात्वा is the absolutive/gerund 'having known'. Only ज्ञेय is the gerundive parallel to कार्य.

39. (C) The gerundive ज्ञेय: means 'to be known / ought to be known', taking the doer in the instrumental — 'उत्पत्तिक्रमः सर्वैः ज्ञेयः' ('the order of creation is to be known by all') uses it correctly. 'He knew...' would need a finite past verb (अजानात्), not the gerundive. The third option misuses it as an abstract 'knowledge'. The fourth treats ज्ञेयः as a proper name, which is not its grammatical function here.

40. (D) ज्ञेयः is a passive gerundive: it describes the OBJECT as 'that which ought to be known'. जानन् is an active present participle describing the DOER ('knowing / one who knows'). So they differ in voice and focus. ज्ञेयः is not past-completed (that is ज्ञात), nor a certain-future agent (no such certainty is implied) — its core sense is 'to-be-known'.

41. (B) Sanskrit has two gerundive suffixes, -य (ज्ञेय) and -तव्य; both mean 'to be X-ed'. So 'should be understood' is बोद्धव्यः (from बुध् + -तव्य), a true gerundive parallel to ज्ञेयः. बुध्यते is a finite present ('understands'), अबुध्यत is past ('understood'), and बोधः is a noun ('understanding') — none carries the 'ought-to-be-done' gerundive force that matches ज्ञेयः.

42. (C) In the Gita the food-cycle makes यज्ञ the link between कर्म and पर्जन्य, and the chapter reads it broadly as selfless, well-directed action (of which the literal fire-ritual is just one instance). Image-based devotional worship is पूजा, a different tradition. रसायनशास्त्रम् (chemistry) is unrelated to यज्ञ. And eating a meal is not what यज्ञ denotes. The broad sense is selfless action.

43. (C) By inserting यज्ञ between कर्म and पर्जन्य, the verse specifies that it is selfless, well-directed action (yajna), not just any action, that ultimately sustains rain → food → beings.

Drop यज्ञ and the chain implies any कर्म whatever produces rain — the moral point (selflessness) is lost. It is therefore not merely 'shorter but identical'. Removing यज्ञ does not reverse पर्जन्य and अन्न, nor sever the food→beings dependence (अन्नात् भवन्ति still holds).

44. (D) The chapter distinguishes them by tradition: यज्ञ = the Vedic fire-offering (अग्नि-
centred), पूजा = devotional worship often centred on an image/मूर्ति. The distinction is about
the form of ritual, not about silence-vs-song, nor about the gender of the performer, nor a
mere spelling difference (they are genuinely different practices).

45. (D) Both are forms of worship, but they belong to different ritual traditions: यज्ञ is the
fire-offering ritual; पूजा is devotional, often image-based worship. So 'identical in every
respect' is wrong. Neither word means chemistry (रसायनशास्त्रम्) or a herb (ओषधि). And both
are nouns naming rituals, so the verb/noun objection is mistaken. The correction is the
tradition-based distinction.

46. (A) The genitive plural ओषधीनाम् means 'of (the) herbs', marking the relation 'growth
OF herbs'. 'From herbs' would be the ablative (ओषधिभ्यः); 'to herbs' the dative (ओषधिभ्यः as
recipient sense); 'by herbs' the instrumental (ओषधिभिः). The -आनाम् ending is unmistakably
genitive plural, so 'of herbs' is correct.

47. (B) ओषधि is a feminine i/i-stem, and the ending -ईनाम् (with the lengthened ī before
-नाम्) is the genitive plural ('of herbs'), giving ओषधीनाम्. It is not an a-stem (those make -आत्
ablative singular / -ानाम् genitive plural differently) nor a consonant-stem neuter
nominative plural, nor an u-stem accusative singular (that would be -उम्). The -ईनाम् pattern
pins it as i/i-stem genitive plural.

48. (D) The accusative case marks the direct object (कर्म), so उत्पत्तिक्रमम् ('the order of
creation') is WHAT is to be known by जानीयात्. The subject (कर्ता) would be nominative (e.g.
छात्रः). The instrument (करण) would be instrumental. The source (अपादान) would be ablative.
The accusative ending fixes its role as the object.

49. (B) उत्पत्ति ('arising') + क्रम ('order/sequence') = 'the order of arising', i.e. the step-by-
step sequence in which things come into being — exactly the chain
action→yajna→rain→food→beings. It is about coming-to-be, not destruction. It denotes a
sequence, not a single act. And it is precisely an order WITH a starting point (कर्म), not one
lacking an origin.

50. (D) Herbs/plants (ओषधि) sit between rain and food: rain nourishes the plants, and
plants/herbs become the food from which beings arise — they connect पर्जन्य to अन्न/भूतानि.
They are not the source of yajna (that is कर्म). They are not a name for ब्रह्म (the Absolute).
And they are not chemistry (रसायनशास्त्रम्). Herbs are a natural rain→food link.

51. (A) शास्त्रम् means a science, systematic discipline or authoritative treatise; so रसायन-
शास्त्रम् is 'the science of रसायन' = chemistry. It does not mean a herb (ओषधि), a fire-ritual
(यज्ञ), or the Absolute (ब्रह्म). The -शास्त्रम् component is what names it a 'science'.

52. (C) Reusing रसायन (an old Ayurvedic word) for the modern science shows Sanskrit's living power to coin precise new terms from old roots — exactly how English reaches for Greek/Latin to name sciences. It does NOT show Sanskrit borrowing from English (the term is Sanskrit-built). The two senses are linked through 'rasa/essence', not coincidental. And the point is terminological adaptability, not a claim that modern chemistry already existed in antiquity.

53. (A) रसायनशास्त्रम् = chemistry, and शास्त्रम् = science/treatise — both correct. Astronomy is खगोलशास्त्रम् and शास्त्रम् is not a herb. Grammar is व्याकरणम् and शास्त्रम् is not a ritual. रसायनशास्त्रम् is chemistry (not 'medicine only'), and शास्त्रम् is not the Absolute (that is ब्रह्म). Only the first pair is right on both counts.

54. (A) All three are ज्ञा-derivatives with distinct functions: जिज्ञासा is the desiderative noun 'wish to know'; जानीयात् is the optative finite verb 'should know'; ज्ञेयः is the gerundive 'to be known'. They are not all present-tense verbs. The second distractor mis-labels each. And they do share one root (ज्ञा), so 'three different roots' is false.

55. (C) जिज्ञासा (curiosity/the wish to know) is the spark; जानीयात् (one should know) is the recognised duty that follows — curiosity leads to the resolve to learn the उत्पत्तिक्रमम्. The sequence is wish → duty → knowing, not the reverse 'know first then lose curiosity'. Duty does not destroy curiosity; it grows from it. And both describe one learner's path, not two unrelated people.

56. (A) Checking each: (1) अन्नाद् is the ablative अन्नात् after sandhi, NOT nominative — wrong. (2) भूतानि here means 'beings/creatures', not ghosts — wrong. (3) जानीयात् is the optative 'should know', not past tense — wrong. So all three claims are mistaken, making 'all three are wrong' the answer; 'only one', 'only two', and 'none' all undercount the errors.

57. (C) In कर्म → यज्ञ → पर्जन्य → अन्न → भूतानि, a drought removes पर्जन्य (rain) first; that starves अन्न (food); and only when food fails do भूतानि (beings) suffer — beings are at the chain's END, so they are the last to be hit. Rain is removed first, not last. यज्ञ and कर्म are UPSTREAM of rain (its sources), so they are not what fails as a consequence of the drought.

58. (D) The correct parse: अन्नाद् is ablative ('from food'), भवन्ति is plain present ('they come to be'), भूतानि is nominative plural 'beings' — together 'from food, beings come to be'. The distractors each pile up errors: calling अन्नाद् nominative/accusative/dative (it is ablative), calling भवन्ति optative/past/future (it is present), and mistranslating भूतानि as ghosts/sacrifices/herbs (it is 'beings'). Only the first line is right on every count.

59. (B) Linking the verse to chemistry shows that ancient insight (the food-life cycle) and modern science can speak about one and the same world from different angles — they complement, not contradict. It does not claim chemistry refutes the verse, nor that the

verse is secretly a chemistry text, nor that the two domains can never meet (the whole point is that they CAN converse).

60. (A) The full, accurate summary chains भूतानि←अन्न←पर्जन्य←यज्ञ←कर्म, grounds it in the all-pervading ब्रह्म, and frames the learner's duty with the optative जानीयात् ('should know'). The first distractor denies the dependence the verse asserts. The second smuggles in the ghost-misreading and a past-tense error. The third turns food into a personal creator-god (ब्रह्मा) and ignores the impersonal-ablative framing. Only the first option captures grammar and meaning together.
