

Olympiad Test Paper — Sanskrit (Class 7) — Paper 4

Chapter 9: अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani)

Paper 4 — (progressively harder)

Subject	Sanskrit (NCERT Class 7, Deepakam)
Chapter	9 — अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani)
Total Questions	60 (Multiple Choice, single correct)
Maximum Marks	240
Suggested Time	90 minutes

Marking scheme: +4 for each correct answer · -1 for each wrong answer · 0 if unattempted.

Instructions: Each question has four options (A), (B), (C), (D); exactly one is correct. National-olympiad traps: the ablative (पञ्चमी, -आत्) marks अपादान — the source a thing 'arises FROM', never an agent that 'makes' it, so अन्नात् ≠ a maker and ≠ the dative अन्नाय ('for food'); भवन्ति governs भूतानि (नपुंसकलिङ्ग nom. pl., identical to acc. pl.) which agrees in being 3rd-person plural, NOT because भूतानि is the source; in अन्नाद्भवन्ति the त् of अन्नात् voices to द् before voiced भ् (case unchanged); the wheel भूतानि←अन्न←पर्जन्य←यज्ञ←कर्म is read by ablatives, so 'X from Y' means Y is the ablative; भवन्ति/सम्भवः/समुद्भवः all share √भू ('become'), making the chain one of coming-into-being not manufacture; जानीयात् is विधिलिङ् (optative, 'should know') of √ज्ञा (the -ईय- marker), distinct from present जानाति, future ज्ञास्यति, imperative जानीहि; ज्ञेयः is the -य gerundive ('to be known'), parallel to कार्य, distinct from past participle ज्ञात and agent ज्ञाता; ब्रह्म (नपुंसक, सर्वव्याप्तः परमेश्वरः, impersonal) ≠ ब्रह्मा (masc. creator) ≠ ब्रह्मन् (priest); ओषधीनाम् is genitive plural of the ई/इ-feminine ओषधि; रसायन is an Ayurvedic word re-coined for modern chemistry; उत्पत्तिक्रमम् ('order of arising') is the कर्म (object) of जानीयात्. Do not write on this paper — mark answers on your answer sheet.

1. Reading Gita 3.14 as a closed wheel (भूतानि←अन्न←पर्जन्य←यज्ञ←कर्म, and कर्म itself ultimately tied back through human beings who act), the deepest reason the verse uses a WHEEL rather than a one-way ladder is to teach that:

- (A) the topmost link, action, is independent and the lower links are mere decoration
- (B) no single link is self-sufficient — each both depends on a prior link and feeds a later one, so sustaining the whole requires participating in it
- (C) the wheel can be entered at any point and each link produces itself
- (D) the order is arbitrary, so any link may be removed without consequence

2. If a society performed action purely for selfish gain and abandoned यज्ञ (selfless action) entirely, tracing Gita 3.14 FORWARD, the chapter's logic predicts the breakdown would begin at:

- (A) पर्जन्य (rain), the link यज्ञ directly sustains, and then ripple down to food and beings
- (B) भूतानि (beings) first, since beings are named first in the verse
- (C) अन्न (food) first, because food is what humans most directly lose
- (D) कर्म (action) first, since action sits above यज्ञ in the chain

3. The verse joins every link with an ABLATIVE ('from X'), and the chapter glosses ब्रह्म as सर्वव्याप्तः. Putting these together, the philosophical claim is best stated as:

- (A) each thing manufactures the next the way a craftsman builds an artefact, under a personal creator's command
- (B) the links arise by random chance and ब्रह्म merely names that randomness
- (C) each thing emerges from its source while the whole interdependent cycle rests on one all-pervading ground (ब्रह्म), not on a separate personal manufacturer
- (D) each link is fully independent and ब्रह्म is the strongest link among them

4. A student argues: 'Since beings come from food, and humans grow food, humans are the true makers of all beings.' The chapter's framing corrects this by pointing out that:

- (A) the ablative marks food as the SOURCE beings emerge from, not an agent that makes them; humans tend a cycle they did not author and themselves depend on
- (B) humans really are the makers, because they perform the action that begins the chain
- (C) food makes beings directly, so neither humans nor anything else is involved
- (D) the verse means beings make food, reversing the student's claim

5. Modern ecology speaks of a food chain: sun → plants → herbivores → carnivores → decomposers → soil → plants. The chapter would say Gita 3.14 and this ecology:

- (A) contradict each other, since the Gita names yajna and ecology does not
- (B) are identical word-for-word, the Gita being an ecology textbook
- (C) have nothing in common, as one is grammar and the other is science
- (D) describe the same interdependent reality from different angles — both show life sustained by a cycle in which nothing stands alone

6. Suppose every herb (ओषधि) on earth vanished. Mapping this onto Gita 3.14 (where rain nourishes herbs/plants that become food), the most accurate prediction is:

- (A) nothing would change, since herbs are not part of the verse's cycle at all
- (B) rain would stop first, because herbs are the source of rain
- (C) beings would be unaffected, since beings come straight from rain, not food
- (D) food would fail even if rain continued, because the plant link that converts rain into food is broken, and beings would suffer in turn

7. In Sanskrit 'a fruit falls FROM the tree' is वृक्षात् फलं पतति. The अन्नात् of अन्नाद् भवन्ति भूतानि plays the SAME grammatical role as वृक्षात्, namely the:

- (A) अधिकरण (location), expressed by the locative
- (B) अपादान (point of separation/origin), expressed by the ablative (पञ्चमी)
- (C) सम्प्रदान (recipient), expressed by the dative
- (D) कर्म (object), expressed by the accusative

8. A pupil renders अन्नात् as 'for the sake of food' and concludes beings exist to serve food. The decisive grammatical objection is that:

- (A) 'for the sake of' is correct, and the verse really does say beings serve food
- (B) अन्नात् is genitive, so it should be 'of food' and the pupil is half right
- (C) अन्नात् is accusative, so the pupil should have said 'food' as the object
- (D) 'for the sake of' is the dative अन्नाय (सम्प्रदान); अन्नात् is ablative (अपादान), so beings arise FROM food, not for it

9. On the model of अन्नाद् भवन्ति भूतानि, which sentence correctly says 'from the cloud, water comes to be', keeping the source in the ablative and the product as a plural-agreeing subject?

- (A) मेघं भवन्ति जलानि
- (B) मेघाय भवन्ति जलानि
- (C) मेघात् भवन्ति जलानि
- (D) मेघस्य भवन्ति जलानि

10. Why does Sanskrit attach the ablative to the SOURCE rather than to the product in अन्नाद् भवन्ति भूतानि?

- (A) because the ablative (अपादान) names the fixed point FROM which the motion or arising proceeds, and food is that starting point while the beings are what arise
- (B) because the ablative always attaches to whichever word is longest in the sentence
- (C) because the product is more important and therefore takes the nominative subject by being the source
- (D) because Sanskrit attaches the ablative to whatever the speaker dislikes

11. A drought ends and heavy rain returns. Reading Gita 3.14 forward from पर्जन्य, the chapter would say the rain helps beings only:

- (A) indirectly — rain first nourishes herbs/plants and food, and only through that restored food do beings flourish
- (B) directly — beings arise straight from rain with no intermediate link
- (C) not at all — rain belongs to a different cycle and never reaches beings
- (D) in reverse — beings produce the rain that then feeds them

12. In अन्नाद् भवन्ति भूतानि, the verb भवन्ति is 3rd-person PLURAL. The grammatical reason is that:

- (A) अन्नाद् is plural, so the verb agrees with the source अन्न
- (B) भवन्ति is plural because it stands in the middle of the sentence

- (C) the verb takes whatever number makes the line sound best, regardless of agreement
(D) its subject भूतानि is a neuter plural in the nominative, and the verb agrees with the subject's number, not with the ablative source

13. भूत is a नपुंसकलिङ्ग (neuter) noun. Knowing that neuter a-stems show identical nominative and accusative plurals, the form one would use BOTH for 'beings arise' (subject) and 'he sees the beings' (object) is:

- (A) भूतान् as object and भूतानि as subject, following the masculine pattern
(B) भूतानि in both, since neuter nominative and accusative plural coincide
(C) भूताः as subject and भूतानि as object
(D) भूतेषु in both, the locative serving for subject and object alike

14. Both भवन्ति and भूतानि occur in the verse and both spring from √भू. The cleanest statement of how they differ is:

- (A) both are verbs, भवन्ति present and भूतानि past, describing one action twice
(B) भवन्ति is a finite present-tense verb ('they come to be'); भूतानि is a noun ('beings') derived from भू's past participle भूत
(C) both are nouns, भवन्ति singular and भूतानि plural, naming the same thing
(D) भवन्ति is the noun and भूतानि is the verb, the reverse of their usual roles

15. A reader claims भूतानि must mean 'ghosts' because भूत means 'ghost' in Hindi. In a Gita verse on the cycle of life, the decisive reason it means 'living beings' is:

- (A) the plural ending -आनि by itself forces the meaning 'beings'
(B) context — within a verse about food sustaining all that lives, the √भू sense 'that which has come to be' (a being) fits, while the folk 'ghost' sense does not
(C) Sanskrit भूत can never carry any ghost-related sense in any text
(D) the noun is feminine, and feminine भूत must mean 'beings'

16. Because भूतानि (from √भू) covers everything that has 'come to be', the verse's claim 'from food beings arise' must be understood to include:

- (A) only human beings, since only humans speak of the Gita
(B) only animals, because plants do not take in food
(C) only the departed souls, since भूत evokes the dead
(D) humans, animals AND plants alike — every living thing that depends on food

17. Which fully correct statement matches the grammar of the verse's first three words?

- (A) अन्नाद् = nominative subject; भवन्ति = optative; भूतानि = accusative object
(B) अन्नाद् = accusative object; भवन्ति = past tense; भूतानि = masculine nom. pl.
(C) अन्नाद् = ablative ('from food'); भवन्ति = 3rd-pl. present of √भू; भूतानि = neuter nom. pl. subject
(D) अन्नाद् = dative; भवन्ति = future; भूतानि = feminine singular

18. In अन्नात् + भवन्ति → अन्नाद्भवन्ति the त् voices to द्. Applying the SAME rule, सत् + चित् would NOT show this voicing because:

- (A) च् is voiced, so the त् stays unchanged as in अन्नाद्
- (B) the following sound च् is UNVOICED, so त् has no voiced consonant to assimilate to (it would instead become च)
- (C) त् can only voice at the end of a sentence, never inside a compound
- (D) the rule applies only before भ् and to no other sound at all

19. By the voicing seen in अन्नाद्भवन्ति, which pair joins CORRECTLY?

- (A) तत् + धर्मः → तद्धर्मः (त् voices to द् before the voiced ध्)
- (B) तत् + धर्मः → तद्धर्मः (त् becomes the aspirate थ्)
- (C) तत् + धर्मः → तन्धर्मः (त् becomes the nasal न्)
- (D) तत् + धर्मः → तद्धर्मः (no change at all)

20. जगत् + ईशः and वाक् + ईशः both join a stop to a vowel. By analogy with the voicing in अन्नाद्भवन्ति (voiced surroundings favour voiced stops), the expected outputs are:

- (A) जगत्ईशः and वाक्ईशः — stops never change before vowels
- (B) जगथीशः and वाखीशः — the stops aspirate before the vowel
- (C) जगन्ईशः and वाडीशः — the stops nasalise before the vowel
- (D) जगदीशः and वागीशः — the final त्/क् voice to द्/ग् before the vowel

21. Which statement about the sandhi in अन्नाद्भवन्ति is FALSE?

- (A) the त् of अन्नात् becomes the voiced द्
- (B) the change occurs because the next sound भ् is voiced
- (C) the word remains ablative ('from food') after the change
- (D) the voicing changes the word from the ablative case into the nominative case

22. After undoing the sandhi अन्नाद्भवन्ति, the two original words are recovered as:

- (A) अन्नात् + भवन्ति
- (B) अन्नाद् + भवन्ति, treating द् as the genuine ending
- (C) अन्न + अद्भवन्ति, splitting at a different point
- (D) अन्नाद + भवन्ति, with a short final vowel

23. The verse uses भवन्ति, and the fuller Gita 3.14 uses सम्भवः and समुद्भवः. That all three share √भू tells the careful reader the chain is fundamentally one of:

- (A) destruction — each link consumes and ends the one before it
- (B) mere renaming — each link is just another word for भू with no real arising
- (C) coming-into-being — each link 'becomes' out of its source
- (D) counting — each link adds one unit to a running total

24. जानीयात् is the form the chapter uses for 'one should know the order of creation'. The single feature of its SHAPE that marks the optative (विधिलिङ्) rather than the present जानाति is:

- (A) the initial जा-, found only in the optative
- (B) the -ईय- element inserted before the ending (जानीयात्), which the present जानाति lacks

(C) the final -त्, found only in the optative

(D) the absence of a prefix, which only the optative shows

25. Sanskrit gives counsel with the optative: सत्यं वदेत् ('one should speak truth'), अहिंसां पालयेत् ('one should keep non-violence'). On this exact pattern, the chapter's जानीयात् is best classed as expressing:

(A) moral/instructional counsel — what one OUGHT to do (here, ought to know)

(B) a completed past event — what one already did

(C) an ongoing present fact — what is happening right now

(D) a sharp direct command — 'know!' issued as an order

26. How does जानीयात् differ in force from the imperative जानीहि?

(A) जानीयात् is the blunt command and जानीहि the mild advice

(B) they are identical in both shape and force

(C) जानीयात् is past and जानीहि is future, so they differ only in time

(D) जानीयात् gently advises 'one should know'; जानीहि directly commands 'know!'

27. Match each √ज्ञा form in the chapter's orbit to its correct mood/tense: जानीयात्, जानाति, ज्ञास्यति.

(A) जानीयात् = present; जानाति = past; ज्ञास्यति = optative

(B) जानीयात् = future; जानाति = optative; ज्ञास्यति = present

(C) all three are the optative of √ज्ञा, differing only in person

(D) जानीयात् = optative ('should know'); जानाति = present ('knows'); ज्ञास्यति = future ('will know')

28. The chapter glosses जानीयात् with अवगच्छेत्. The telling point that this gloss is itself an optative (अवगच्छेत्) is that:

(A) the gloss was chosen to preserve the MOOD — a 'should know' explained by another 'should understand'

(B) the gloss was chosen to change the tense from present to past

(C) the gloss was chosen to switch the number from singular to plural

(D) the gloss was chosen to turn the active form into a passive one

29. Which sentence uses the optative correctly to render 'a student should know the cycle of creation', echoing जानीयात्?

(A) छात्रः उत्पत्तिक्रमं जानाति (a plain present 'knows') (B) छात्रः उत्पत्तिक्रमम् अजानात् (a past 'knew')

(C) छात्रः उत्पत्तिक्रमं जानीयात्

(D) छात्रः उत्पत्तिक्रमं ज्ञास्यति (a future 'will know')

30. ज्ञेयः is the gerundive of √ज्ञा. Just as कृत ('done') yields कार्य ('to be done'), ज्ञेय stands to ज्ञात ('known') as its:

(A) plural form — 'many known things'

(B) 'to-be-X-ed' counterpart — 'to be known / that which ought to be known'

(C) agent noun — 'one who knows'

(D) abstract noun — 'knowledge itself'

31. Which sentence uses ज्ञेयः with its correct PASSIVE-prescriptive gerundive sense?

- (A) सः उत्पत्तिक्रमं ज्ञेयः — 'he knew the order of creation'
- (B) ज्ञेयः नाम बालकः आसीत् — 'there was a boy named Jneya'
- (C) उत्पत्तिक्रमः सर्वैः ज्ञेयः — 'the order of creation is to be known by all'
- (D) उत्पत्तिक्रमं ज्ञेयः गच्छति — 'the one to be known goes to the cycle'

32. The gerundive ज्ञेयः differs from the present participle जानन् ('knowing / one who knows') in that ज्ञेयः is:

- (A) passive and prescriptive — 'that which is TO BE known', focused on the object
- (B) active and present — 'one who is knowing', focused on the doer
- (C) past and completed — 'one who already knew'
- (D) future and certain — 'one who will definitely know'

33. If one wanted to say 'the cycle of creation must be understood', using the -तव्य gerundive of √बुध् parallel to ज्ञेयः, the correct phrase is:

- (A) उत्पत्तिक्रमं बुध्यते (a present verb 'is understood')
- (B) उत्पत्तिक्रमः बोद्धव्यः
- (C) उत्पत्तिक्रमम् अबुध्यत (a past verb 'was understood')
- (D) उत्पत्तिक्रमस्य बोधः (a noun 'understanding of the cycle')

34. जिज्ञासा ('wish to know'), जानीयात् ('should know') and ज्ञेयः ('to be known') all spring from √ज्ञा. The single statement that correctly classifies all three is:

- (A) all three are plain present-tense verbs of √ज्ञा
- (B) जिज्ञासा is a command, जानीयात् a noun, ज्ञेयः a past tense
- (C) जिज्ञासा = desiderative-derived noun (the WISH to know); जानीयात् = optative (one SHOULD know); ज्ञेयः = gerundive (that which is TO BE known)
- (D) they come from three different roots that merely look alike

35. The chapter links जिज्ञासा to जानीयात्, then to ज्ञेयः. The learning arc this captures, in order, is:

- (A) first one already knows everything, then the wish to know is lost, then knowing becomes forbidden
- (B) first the WISH to know (जिज्ञासा) sparks inquiry, then one realises one OUGHT to know (जानीयात्), and the cycle stands as something TO BE known (ज्ञेयः)
- (C) the duty to know (जानीयात्) destroys curiosity (जिज्ञासा), leaving nothing to be known
- (D) the three describe three unrelated people with no shared progression

36. The chapter distinguishes three look-alike words. Which row pairs each with its CORRECT gender and sense?

- (A) ब्रह्म = masculine, a priest; ब्रह्मा = neuter, the Absolute; ब्रह्मन् = the creator-god
- (B) ब्रह्म = the creator-god; ब्रह्मा = a priest; ब्रह्मन् = the neuter Absolute

(C) ब्रह्म = neuter, the all-pervading Absolute; ब्रह्मा = masculine, the creator-god; ब्रह्मन् = a priest

(D) all three are neuter and mean the impersonal Absolute

37. The chapter glosses ब्रह्म as सर्वव्याप्तः परमेश्वरः. The word सर्वव्याप्तः most precisely conveys that ब्रह्म is:

- (A) all-powerful — able to accomplish anything
- (B) all-knowing — aware of every fact
- (C) all-pervading — present everywhere, within everything
- (D) all-merciful — kind toward every creature

38. The chapter says the food–rain–yajna cycle 'rests in' ब्रह्म rather than ब्रह्मा. The deeper reason for choosing the NEUTER ब्रह्म is that:

- (A) the neuter merely makes ब्रह्म weaker than the masculine ब्रह्मा
- (B) the neuter signals an impersonal, beyond-gender principle pervading the whole cycle, whereas ब्रह्मा would name a single personal creator-figure standing apart
- (C) the neuter makes ब्रह्म an inert object like a stone, unfit to ground anything
- (D) the neuter makes ब्रह्म grammatically plural, i.e. a crowd of gods

39. Which sentence-completion uses the right 'Brahma' word? 'The fire-ritual was conducted by the _____, who chanted the mantras.'

- (A) ब्रह्म (the neuter Absolute)
- (B) ब्रह्मा (the creator-god)
- (C) ब्रह्मन् (the priest)
- (D) रसायन (chemistry)

40. Because the verse joins links with ablatives ('from X') rather than naming a maker, it avoids implying a personal builder at the food-link. This fits the chapter's framing of the cycle as grounded in:

- (A) ब्रह्मा, the personal creator-god who fashions each being by hand
- (B) ब्रह्मन्, a human priest who performs the making
- (C) pure random chance, with no underlying ground at all
- (D) ब्रह्म, the impersonal all-pervading Power — not a personal manufacturer

41. In Gita 3.14, यज्ञ is taken in its BROADEST sense. That sense is:

- (A) only image-based devotional worship in a temple
- (B) selfless, well-directed action (कर्म offered without selfish motive), of which fire-ritual is one form
- (C) the modern science of chemistry
- (D) any meal eaten as a religious obligation

42. Suppose the chain dropped the यज्ञ step, reading कर्म → पर्जन्य → अन्न → भूतानि. The deepest loss of meaning would be that:

- (A) the chain would be shorter but mean exactly the same
- (B) rain would now arise from food instead of from action

- (C) any action whatever would seem to sustain rain, erasing the verse's point that it is SELFLESS action (yajna) that upholds the cycle
- (D) beings would no longer depend on food at all

43. Which best states the difference between यज्ञ and पूजा that the chapter draws?

- (A) यज्ञ is silent while पूजा is always sung (B) they differ only in spelling, not in meaning
- (C) यज्ञ is a Vedic fire-offering ritual; पूजा is devotional worship, often image-based — two different ritual traditions
- (D) यज्ञ is a verb and पूजा is a noun, so they cannot be compared

44. A pupil says 'यज्ञ and पूजा are just two words for the same act.' The best correction is:

- (A) they are indeed identical in every respect
- (B) यज्ञ means chemistry and पूजा means a herb
- (C) यज्ञ is past tense and पूजा is future tense, so they differ only in time
- (D) they overlap as forms of worship but differ in tradition — यज्ञ centres on a fire-offering, पूजा on devotional (often image-based) worship

45. ओषधीनाम् ends in -ईनाम्. This identifies ओषधि as which kind of stem, and the form as which case-and-number?

- (A) an a-stem masculine noun; the form is ablative singular
- (B) a consonant-stem neuter noun; the form is nominative plural
- (C) a u-stem noun; the form is accusative singular
- (D) an ī/i-stem feminine noun; the form is genitive plural ('of herbs')

46. In 'rain helps the growth OF herbs', ओषधीनाम् translates as:

- (A) 'of (the) herbs' — the genitive marking relation/possession
- (B) 'from herbs' — an ablative of source (C) 'to herbs' — a dative of recipient
- (D) 'by herbs' — an instrumental of means

47. Where does ओषधि (herbs/plants) fit most naturally in the life-cycle the chapter describes?

- (A) as the source of yajna, replacing action
- (B) as the link between rain and food/beings — rain nourishes herbs/plants, which become food
- (C) as a synonym for ब्रह्म, the Absolute (D) as the modern science of chemistry

48. उत्पत्तिक्रमम् is the OBJECT of जानीयात् in 'one should know the order of creation'. Its accusative-singular ending marks its role as the:

- (A) कर्ता (subject) — the one who knows (B) करण (instrument) — the means of knowing
- (C) अपादान (source) — that from which the knowing comes
- (D) कर्म (direct object) — the thing that is to be known

49. उत्पत्तिक्रमम् analyses as उत्पत्ति + क्रम. Given उत्पत्ति = 'arising/origination' and क्रम = 'order/sequence', the compound means:

- (A) 'the destruction of order' — the breakdown of sequence
- (B) 'the order/sequence of arising' — the step-by-step way things come to be
- (C) 'a single act of arising' — one origination only
- (D) 'a sequence with no origin' — order lacking any beginning

50. रसायनशास्त्रम् analyses as रसायन + शास्त्रम्. The element शास्त्रम् contributes the meaning:

- (A) 'a herb or medicinal plant' (B) 'a fire-offering ritual'
- (C) 'the all-pervading Absolute' (D) 'science / systematic discipline / treatise'

51. The chapter notes रसायन once named Ayurvedic rejuvenation tonics but now names chemistry. The deeper point this illustrates about Sanskrit is that it:

- (A) is a living language able to re-coin old roots for new ideas, much as English borrows Greek/Latin for new sciences
- (B) has no scientific vocabulary of its own and must borrow from English
- (C) shows only an unrelated coincidence between the two senses of रसायन
- (D) proves chemistry was already a fully developed modern science in ancient India

52. A student writes: 'अन्नाद् is nominative, भूतानि means ghosts, and जानीयात् is past tense.' How many of these three claims are wrong?

- (A) only one is wrong (B) only two are wrong
- (C) all three are wrong (D) none is wrong

53. Which single statement correctly combines the verse's grammar AND meaning?

- (A) अन्नाद् (ablative 'from food') + भवन्ति (present 'come to be') + भूतानि (nom. pl. 'beings') = 'from food, beings come to be'
- (B) अन्नाद् (nominative 'food') + भवन्ति (optative 'should be') + भूतानि (ghosts) = 'food should become a ghost'
- (C) अन्नाद् (accusative 'food') + भवन्ति (past 'became') + भूतानि (sacrifices) = 'food became sacrifices'
- (D) अन्नाद् (dative 'for food') + भवन्ति (future 'will be') + भूतानि (herbs) = 'herbs will be for food'

54. A teacher draws the wheel कर्म → यज्ञ → पर्जन्य → अन्न → भूतानि on the board. A student redraws it as भूतानि → अन्न → पर्जन्य → यज्ञ → कर्म and says 'same wheel, just reversed; both are right.' The correct response is:

- (A) the arrows must point from source to product, so only कर्म → यज्ञ → पर्जन्य → अन्न → भूतानि matches the ablatives; the reversed arrows wrongly make beings the source of food
- (B) both are right, since a wheel reads the same in either direction
- (C) only the reversed one is right, because the verse names भूतानि first
- (D) neither is right, because the cycle has no fixed order of arising

55. The verse couples an ablative-of-source (अन्नात्) with the verb भवन्ति rather than a verb like करोति ('makes'). The reason this verb choice matters is:

- (A) both verbs mean the same, so the choice is purely stylistic
- (B) करोति would be required, since beings must be actively made by food
- (C) भवन्ति ('come to be') matches 'arising from a source', whereas करोति ('makes') would wrongly imply an agent fabricating beings
- (D) भवन्ति is wrong here and the verse should have used a passive of कृ

56. Putting the whole verse together, अन्नाद् भवन्ति भूतानि — read with its grammar — most precisely teaches that:

- (A) all living beings emerge from food as their source (ablative), in a present, ongoing way (भवन्ति) — not that any maker fabricates them
- (B) beings deliberately manufacture their own food and so need no source
- (C) food is a personal creator-god that builds each being from nothing
- (D) ghosts arise from food, and the arising already happened in the past

57. Why is it MORE accurate to call Gita 3.14 a cycle of 'interdependence' than a chain of 'command', given its grammar?

- (A) because the verse uses imperative commands at each link, showing a chain of orders
- (B) because the links are listed in random order, which only command-language allows
- (C) because every link is tied by an ablative of source, expressing dependence on a prior link, with no word implying one link ORDERS another
- (D) because the ablative is a case of authority, marking who commands whom

58. Which row correctly pairs THREE √ज्ञा derivatives with their forms: जानीयात्, ज्ञेयः, ज्ञाता?

- (A) जानीयात् = gerundive; ज्ञेयः = agent noun; ज्ञाता = optative
- (B) जानीयात् = agent noun; ज्ञेयः = optative; ज्ञाता = gerundive
- (C) all three are past participles of √ज्ञा
- (D) जानीयात् = optative ('should know'); ज्ञेयः = gerundive ('to be known'); ज्ञाता = agent noun ('a knower')

59. Summing up the chapter, which statement is the MOST complete and accurate?

- (A) beings make their own food, so the cycle needs neither rain nor yajna nor action
- (B) all beings arise from food, food from rain, rain from yajna, yajna from action — an interdependent cycle grounded in the all-pervading ब्रह्म, which a student SHOULD know (जानीयात्)
- (C) ghosts arise from food, and one already knew (past tense) the whole cycle long ago
- (D) food is the personal creator-god who builds every being individually from nothing

60. In पर्जन्यादन्नसम्भवः, the word सम्भवः (with prefix सम्- on √भू) names the 'arising/coming-together-into-being' of food. Compared with the plain भवन्ति of the first line, the prefixed सम्भवः shows that the verse:

(A) uses the SAME root 𐎧 throughout but as a noun here ('the arising of food'), reinforcing that every link is a 'becoming' from its source

(B) switches to a different root meaning 'to destroy', so food is consumed rather than arising

(C) turns 𐎧 into a past-tense verb, telling us food already arose and no longer does

(D) abandons the becoming-idea, since सम्- changes the meaning to 'making' by an agent

Solutions — Sanskrit (Class 7), Chapter 9: अन्नाद् भवन्ति भूतानि (Annad Bhavanti Bhutani) — Paper 4

Paper 4 — (progressively harder)

Marking: +4 correct, –1 wrong, 0 unattempted. Maximum marks **240**.

10	A	20	D	30	B	40	D	50	D	60	A

Answer-key distribution: A = 15, B = 15, C = 15, D = 15.

Worked Solutions

1. (B) A wheel image stresses mutual interdependence: every link receives from one neighbour and gives to another, so none stands alone and the cycle is maintained only by taking part in it. The other options either privilege one link as self-standing, claim self-production, or deny that order matters.

2. (A) Yajna directly produces rain in the chain, so removing yajna fails rain first; the failure then cascades through food to beings. Beings and food fail later, not first, and action is the upstream cause that is not itself produced by yajna.

3. (C) The ablative says 'arises from' (source, not maker), and an all-pervading ground underlies all links — so the picture is emergence-within-one-ground, not manufacture-by-a-builder, not chance, and not a hierarchy of independent links.

4. (A) Ablative = source of emergence, never agency of fabrication; humans participate in and depend on the cycle rather than authoring beings. The other options grant fabricating agency, drop human involvement, or invert the chain.

5. (D) The chapter links the ancient verse to modern science (e.g. रसायनशास्त्रम्) precisely to show two angles on one world. They are neither contradictory, nor literally the same text, nor wholly unrelated.
6. (D) Herbs/plants are the link turning rain into food; remove them and food fails despite rain, then beings suffer. Herbs are not the source of rain, and beings come from food (not directly from rain).
7. (B) Both वृक्षात् and अन्नात् are ablatives marking अपादान, the fixed point something moves or arises away from. Locative marks place, dative the recipient, accusative the object — none fits 'from'.
8. (D) Purpose/benefit is the dative (अन्नाय); the -आत् form is ablative of source. So the verse means emergence from food, refuting the 'for the sake of' reading; it is neither genitive nor accusative here.
9. (C) The source 'cloud' must be ablative मेघात् ('from the cloud'), exactly parallel to अन्नात्. Accusative मेघं, dative मेघाय, and genitive मेघस्य would mean 'the cloud (object)', 'for the cloud', and 'of the cloud' respectively.
10. (A) अपादान is precisely the point of origin/separation; food is that origin, so it takes the ablative, while the arising beings are the nominative subject. Word length, importance, or sentiment have no bearing on case assignment.
11. (A) In the chain rain → food → beings, rain reaches beings only through food; it is not a direct source of beings, is part of the same cycle, and beings do not produce rain.
12. (D) A finite verb agrees with its nominative subject; भूतानि (neuter nom. pl.) drives the plural भवन्ति. The ablative अन्नाद् is not the subject, and agreement is grammatical, not positional or euphonic.
13. (B) Neuter a-stems have one form (here भूतानि) for both nom. and acc. plural. भूतान्/भूताः are masculine endings, and भूतेषु is locative, none of which fits a neuter subject/object.
14. (B) भवन्ति is a finite verb; भूतानि is a participle-derived noun. They are not both verbs, not both nouns, and their categories are not reversed.
15. (B) Context decides: a life-cycle verse selects the 'living being' sense of भूत. The plural ending alone does not fix the meaning, the ghost sense exists elsewhere in Sanskrit, and भूत is neuter, not feminine.
16. (D) भूत embraces all that has come into being, so the claim covers humans, animals and plants. Restricting it to humans, to animals, or to the dead all narrow भूत improperly.
17. (C) The source word is ablative, the verb is present plural, and the subject is neuter nominative plural. The other rows misassign case, mood, tense or gender.

18. (B) The voicing seen before भ् happens because भ् is voiced; before the unvoiced च् the त् does not voice (it assimilates to च्). च् is unvoiced, the rule is not sentence-final-only, and voicing occurs before any voiced consonant, not only भ्.

19. (A) Before the voiced ध्, the त् voices to द्, giving तद्धर्मः — exactly the अन्नाद् pattern. It does not aspirate to थ्, nasalise to ण्, or stay unchanged here.

20. (D) Final unvoiced stops voice in voiced surroundings (vowels are voiced), giving जगदीशः, वागीशः — the same voicing principle as त्→द् in अन्नाद्. They do not stay unchanged, aspirate, or nasalise here.

21. (D) Sandhi alters only the surface sound, never the case: अन्नाद् stays ablative. The three true statements correctly describe the voicing, its trigger, and the unchanged case.

22. (A) The underlying ablative ends in त् (अन्नात्); the द् is only the sandhi-surface form. The other splits keep the surface द्, break the words wrongly, or invent a short vowel.

23. (C) The repeated √भू ('to be/become') marks every step as a becoming-from-a-source, not destruction, not synonymy, and not enumeration.

24. (B) The optative marker here is the -ईय- before the ending. The जा- and the -त् appear in other forms too (जानाति also has जा- and ends in -त्), and prefix-absence is not an optative signal.

25. (A) वदेत्/पालयेत्/जानीयात् are all optatives giving advice ('one should ...'). They are not past narration, not present statement of fact, and softer than the direct imperative command.

26. (D) The optative advises; the imperative commands. The two are not swapped, not identical, and neither is a past or future tense.

27. (D) जानीयात् is विधिलिङ् (optative), जानाति is present, ज्ञास्यति is future. The other rows shuffle the labels or wrongly call all three optative.

28. (A) Glossing an optative with another optative keeps the 'ought to' force intact. The gloss does not alter tense, number, or voice.

29. (C) Only जानीयात् carries the 'should' force. जानाति states a present fact, अजानात् reports the past, and ज्ञास्यति predicts the future — none means 'should know'.

30. (B) The -य् gerundive expresses 'to be X-ed', so ज्ञेय = 'to be known', parallel to कार्य = 'to be done'. It is not a plural, not the agent (ज्ञाता), and not the abstract noun (ज्ञानम्).

31. (C) A gerundive takes the agent in the instrumental (सर्वैः) and means 'is to be known', so the correct sentence is the passive-prescriptive one. The others treat ज्ञेयः as a past verb, a proper name, or an active agent.

- 32. (A)** ज्ञेयः is a passive necessity-form centred on the thing to be known; जानन् is an active present participle centred on the knower. ज्ञेयः is neither a past form nor a future-certainty form.
- 33. (B)** बोद्धव्यः is the -तव्य gerundive ('to be understood'), the structural twin of ज्ञेयः. The others are a present verb, a past verb, and an abstract noun — none expresses 'must be understood' as a gerundive.
- 34. (C)** The three are a desiderative noun, an optative, and a gerundive — three distinct derivations of one root. They are not all present verbs, not mislabelled as command/noun/past, and not from different roots.
- 35. (B)** Curiosity sparks inquiry, duty directs it, and the subject stands as worth knowing — a natural arc. The distractors invert or sever the progression.
- 36. (C)** ब्रह्म (neuter) is the impersonal Absolute, ब्रह्मा (masc.) the creator-god, ब्रह्मन् a priest. The other rows misassign gender and meaning or collapse the three into one.
- 37. (C)** सर्वव्याप्त means 'pervading all' — omnipresence, not specifically omnipotence, omniscience, or mercy.
- 38. (B)** Neuter gender here marks an impersonal, ungendered ground — fitting for an all-pervading principle, not a personal creator. It does not mean weakness, inertness, or plurality.
- 39. (C)** A human officiant who chants is the priest, ब्रह्मन्. The impersonal Absolute and the creator-god do not chant as ritual officiants, and रसायन means chemistry.
- 40. (D)** The ablative-of-source avoids a maker, matching the impersonal ground ब्रह्म. It is not the personal creator ब्रह्मा, not the priest ब्रह्मन्, and not groundless chance.
- 41. (B)** Here यज्ञ widens to mean selfless action generally, fire-ritual being one instance. It is not narrowed to temple पूजा, not chemistry, and not a meal.
- 42. (C)** यज्ञ specifies that selfless action sustains the cycle; removing it would let any action qualify, losing the moral point. The chain would not keep the same meaning, would not resource rain from food, and would not free beings from food.
- 43. (C)** The contrast is one of ritual tradition: fire-offering vs (often image-based) devotion. It is not about sound, not mere spelling, and both are nouns.
- 44. (D)** Both are worship yet differ in ritual form (fire-offering vs image-devotion). They are not identical, not chemistry/herb, and not tenses.
- 45. (D)** The -ईनाम् ending marks the genitive plural of an ī/i-stem feminine like ओषधि. The other parses misname the stem class and the case-number.

- 46. (A)** Genitive plural gives 'of the herbs'. 'From', 'to', and 'by' would be ablative, dative, and instrumental respectively — none of which is the -ईनाम् form.
- 47. (B)** Plants convert rain into food on which beings live, so herbs sit between rain and food. They are not the source of yajna, not ब्रह्म, and not chemistry.
- 48. (D)** The accusative marks the कर्म (direct object) — what is known. The knower is the कर्ता (nominative), the means the करण (instrumental), and the source the अपादान (ablative).
- 49. (B)** The compound joins 'arising' with 'order' to mean the sequence in which things come to be. It is not destruction, not a single act, and not an origin-less sequence.
- 50. (D)** शास्त्रम् means a systematic discipline or treatise, so रसायनशास्त्रम् = chemistry. It does not mean a herb, a ritual, or the Absolute.
- 51. (A)** Re-using रसायन for chemistry shows a living language adapting old vocabulary, paralleling English's classical borrowings. It does not show poverty of vocabulary, mere coincidence, or that modern chemistry already existed.
- 52. (C)** अन्नाद् is ablative (not nominative), भूतानि means 'beings' (not ghosts), and जानीयात् is optative (not past) — three errors. So 'all three' is correct.
- 53. (A)** Only the first row gets case, mood/tense, and meaning all right. The others misassign the case of अन्नाद्, the form of भवन्ति, and the meaning of भूतानि.
- 54. (A)** Each ablative fixes the arrow's direction (from source to product). Reversing the arrows reverses the claimed sources, e.g. making beings produce food, which the verse denies. The verse does have a fixed productive order.
- 55. (C)** भू ('become') fits emergence-from-a-source, the very idea the ablative carries; कृ ('make') would smuggle in an agent. The verbs are not synonyms here, करोति is not required, and भवन्ति is the apt choice.
- 56. (A)** The ablative gives source-not-maker and the present भवन्ति gives an ongoing arising — beings emerge from food. The distractors reverse the source, posit a personal maker, or mistranslate भूतानि and the tense.
- 57. (C)** Ablatives express 'arising from' (dependence), and the verse contains no commanding force, so 'interdependence' fits better than 'command'. There are no imperatives, the order is not random, and the ablative is a case of source, not authority.
- 58. (D)** जानीयात् is the optative, ज्ञेयः the gerundive (to be known), and ज्ञाता the agent (knower). The other rows scramble these or wrongly call all three past participles.
- 59. (B)** The full answer keeps the chain, the impersonal ground ब्रह्म, and the optative duty to know it. The distractors break the chain, mistranslate भूतानि and the tense, or replace the

impersonal ground with a personal maker.

60. (A) सम्भवः is a √भू-derived noun ('arising'), so the same 'becoming' idea continues, now expressed as a noun. It is not a destruction-root, not a past-tense verb, and the prefix सम्- does not convert it into agent-driven 'making'.
