

Olympiad Test Paper — Sanskrit (Class 7) — Paper 5

Chapter 1: वन्दे भारतमातरम् (Vande Bharatamataram)

Paper 5 — (progressively harder)

Subject	Sanskrit (NCERT Class 7, Deepakam)
Chapter	1 — वन्दे भारतमातरम् (Vande Bharatamataram)
Total Questions	60 (Multiple Choice, single correct)
Maximum Marks	240
Suggested Time	90 minutes

Marking scheme: +4 for each correct answer · -1 for each wrong answer · 0 if unattempted.

Instructions: Each question has four options (A), (B), (C), (D); exactly one is correct. Classic Paper-5 traps: mistaking the diagnostic that uniquely fixes a case/number when two forms look alike, confusing which member of a compound is the head versus the qualifier and whether the whole names an inside or outside referent, reading ātmanepada endings as parasmaipada or vice-versa, treating a noun-derived salutation (वन्दनम्) as if it governed cases like the finite verb वन्दे, and reasoning that vowel-length or dual marking is decorative when it is the sole meaning-bearing signal. Do not write on this paper — mark answers on your answer sheet.

1. Three readers each defend a different parsing of वन्दे: (i) a passive 'is saluted', (ii) an optative 'may I salute', (iii) an indicative present 'I salute'. Which single grammatical fact, drawn from the form alone, simultaneously eliminates the passive AND the optative reading the chapter teaches?

(A) वन्दे is genuinely a passive whose subject is 'the Mother', so only the optative reading is wrong.

(B) वन्दे is a present-indicative ātmanepada finite verb carrying the agent 'I' and asserting the action as a fact now — it has neither the passive marker that would make the Mother the agent nor the mood-marker of a wish, so both rival readings are ruled out by the same form.

(C) वन्दे has no person built into it, so it could equally be any of the three and grammar cannot decide.

(D) वन्दे is an imperative addressed to the Mother, so 'be saluted' is right and only the indicative is excluded.

2. A learner reasons: 'मातरम् is the object, and the dictionary lists माता; so to make the object I just append -म् to माता, giving मातरम्.' Two separate things are wrong here. Which option names BOTH?

- (A) मातरम् is actually correct; the only error is that वन्दे should govern the nominative माता instead.
- (B) Both steps are fine; the sole error is that the object should be the dual मातरौ.
- (C) The base for case-endings is the stem मातृ (not the nominative माता), and the accusative singular of this ऋ-stem is मातरम् — formed by strengthening मातृ to मातर- then adding -म्; so the learner used the wrong base (the nominative form) and skipped the required stem-strengthening.
- (D) The base माता is correct, but the ending should be -आम्, giving माताआम्.

3. मातरम् (acc. sg.) and मातरौ (acc. du.) share the strengthened piece मातर-. A student concludes 'therefore -म् marks singular and -औ marks dual as endings tacked on मातर- in the same way.' What subtle correction does the chapter's declension actually require?

- (A) The student is wrong: मातरौ is built on a different stem मातार-, not मातर-, so the two do not share a base.
- (B) The student is wrong: -औ is a plural ending, so मातरौ means more than two mothers.
- (C) Both forms do ride on the strengthened stem मातर-, and there the student is right; the genuine subtlety is only that -म् is the accusative-SINGULAR marker while -औ is the accusative-DUAL marker, so number is read off the ending while the strengthened stem is shared — the student's description is essentially correct.
- (D) The student is wrong: -म् is the nominative ending, so मातरम् is the subject form.

4. The chapter says वन्दे governs an accusative object while नमः can be construed with a dative. A student infers: 'so every verb meaning salute takes accusative, and every indeclinable meaning salute takes dative.' Why is this generalisation unsafe even within the chapter's logic?

- (A) Because नमः is actually a verb and वन्दे an indeclinable, so the student's labels are swapped but the rule holds.
- (B) Because both वन्दे and नमः really take the genitive, so neither part of the generalisation is correct.
- (C) Because the dative and accusative are the same case in Sanskrit, so the distinction the student draws does not exist.
- (D) Case-government is a lexical property of each particular word, not of the meaning 'salute' or of the word's part of speech as a class — the chapter shows वन्दे (a verb) demanding accusative and नमः (an indeclinable) licensing dative as two specific facts, from which no blanket rule keyed to meaning or to verb-versus-indeclinable can be safely projected.

5. From वन्दे ('I salute', 1 sg. ātmanepada) the third singular is वन्दते and the first plural is वन्दामहे. A student must produce 'they (all) salute'. Choosing among वन्दे, वन्दते, वन्दामहे and वन्दन्ते, which is correct, and why is each rejected form rejected by a DIFFERENT mismatch?

- (A) वन्दामहे is correct for 'they salute'; the others are all simply singular forms.
- (B) वन्दते is correct for 'they salute'; -ते is the plural ending here.
- (C) वन्दन्ते is correct for 'they salute' (3rd plural); वन्दे is rejected as 1st singular ('I'), वन्दते as 3rd singular ('he/she'), and वन्दामहे as 1st plural ('we') — each wrong option fails on a distinct person-or-number value.
- (D) वन्दे is correct for 'they salute'; in ātmanepada the 1st-singular form doubles as the 3rd plural.

6. सिञ्चन्ति ('they water') ends in -अन्ति (parasmaipada) while वन्दते ('he/she salutes') ends in -ते (ātmanepada), yet both are third person. A learner says: 'since both are third person, the endings should match; the difference must mark tense, not person.' Correct the reasoning.

- (A) Correct: the endings differ because सिञ्चन्ति is present and वन्दते is past tense.
- (B) Correct: Sanskrit has only one ending-set, so -अन्ति and -ते must be two persons, third and second.
- (C) The learner is right that endings should match; वन्दते is therefore a misprint for वन्दन्ति.
- (D) Both endings do mark third person, but they belong to two different sets of personal endings (parasmaipada -अन्ति vs ātmanepada -ते) selected by the verb's class/pada — so the difference reflects which ending-set the root takes, not a difference of tense.

7. A student writes वन्दे सुजला सुफला सस्यश्यामला माता, then writes वन्दे सुजलाम् सुफलाम् सस्यश्यामलाम् मातरम्. The chapter calls the first wrong on a SINGLE underlying ground covering all four words. What is that ground, stated as a principle rather than a list?

- (A) The single ground is that all four words should be instrumental, since they describe the means by which the Mother is honoured.
- (B) As the object of वन्दे, the noun must stand in the accusative, and every adjective agreeing with it must copy that case, number and gender — so the lone principle 'agreement of the qualifiers with the accusative head' simultaneously requires मातरम् and all three adjectives to be accusative, which the first version violates by leaving them in their nominative citation forms.
- (C) There is no single ground; the noun is wrong for one reason (object-case) and the adjectives for an unrelated reason (gender).
- (D) The single ground is that वन्दे takes no object, so all four should remain nominative as in the first version.

8. पर्वतराजः is read पर्वतानाम् राजा ('king of mountains'), a तत्पुरुष naming its own head (a king). नीलकण्ठः ('blue-throated', a name of Shiva) names not a throat or a colour but an outside person who HAS a blue throat. Using these as models, classify देशभक्तः and identify why it is NOT of the नीलकण्ठः type.

(A) देशभक्तः is a बहुव्रीहि like नीलकण्ठः, because it points to a country outside the compound that the devotee belongs to.

(B) देशभक्तः is a तत्पुरुष like पर्वतराजः: its head भक्तः names exactly what the whole denotes (a devotee, qualified as country-directed), so it points INSIDE itself — unlike नीलकण्ठः, a बहुव्रीहि that points to an outside bearer, देशभक्तः does not denote some third thing 'possessing' a country-devotee.

(C) देशभक्तः is a द्वन्द्व meaning 'country and devotee', two coordinated nouns, so it names neither member as head.

(D) देशभक्तः and नीलकण्ठः are both तत्पुरुष, since each simply names its first member.

9. रत्नाकरः = रत्नानाम् आकरः ('mine of jewels') and names the ocean, yet the word समुद्र never appears. A student concludes 'so रत्नाकरः must secretly contain the letters of समुद्र.' Replace this with the correct account of how the epithet refers.

(A) It refers by DESCRIPTION: its members ('jewels' + 'store/mine') name a characteristic property of the ocean, and the reader decodes the intended referent from that sense plus context — there is no hidden copy of समुद्र inside the word at all.

(B) It refers because रत्नाकरः is merely an alternative spelling of समुद्र with identical letters rearranged.

(C) It refers because Sanskrit poetry forbids the word समुद्र, so a legally required substitute is inserted.

(D) It refers because आकरः by itself already means 'ocean', and रत्न- is only decorative.

10. कृषकबान्धवाः is glossed 'farmer-brethren'. A student claims the plural ending sits on the head AND that the head is the member naming the broad category 'brethren', so the compound denotes brethren who happen to be farmers. Evaluate both halves of the claim.

(A) The head is correctly बान्धव, but the plural ending actually sits on कृषक, giving कृषकाः-बान्धव.

(B) Both halves are right: in this तत्पुरुष the head is the last member बान्धव ('brethren'), which carries the nominative-plural ending -आः, and कृषक merely qualifies it — so the compound denotes brethren (the kinsmen) characterised as farmers.

(C) The head is कृषक (the first member), so the compound denotes farmers who are merely brotherly, and the plural marks those farmers.

(D) Neither member is head; this is a द्वन्द्व 'farmers and brethren', so both members would independently take plural endings.

11. सस्यश्यामला is split सस्य + श्यामला, an instrumental-type तत्पुरुष 'dark-green BY/WITH crops'. Applying the SAME relation, the coined word तपःकृशा (तपस् + कृशा) about an ascetic woman would most naturally mean:

(A) made thin BY/THROUGH austerity (lean because of penance)

(B) the queen of austerities (austerity's ruler)

(C) one who has no austerity (austerity-less)(D) austerity and thinness paired together

12. समुद्रः भारतमातुः चरणौ प्रक्षालयति packs three roles. A student labels समुद्रः accusative (because it is first), चरणौ nominative (because -औ 'looks like a subject ending'), and भारतमातुः instrumental (because it precedes the object). Correct ALL THREE at once.

- (A) समुद्रः nominative subject, चरणौ accusative dual, भारतमातुः instrumental means — only the third label was wrong.
- (B) समुद्रः accusative object, चरणौ nominative subject, भारतमातुः genitive — only the first two were wrong.
- (C) समुद्रः is the nominative subject (the doer), चरणौ is the accusative dual (the two feet, the thing washed), and भारतमातुः is the genitive of possession ('whose feet') — none of the student's three labels is right.
- (D) समुद्रः instrumental means, चरणौ genitive dual, भारतमातुः nominative subject — all three differ from the student but in this way.

13. The chapter expresses 'the Motherland's feet' as भारतमातुः चरणौ with a genitive possessor. Now consider the invented देवाः भारतमातुः वन्दनम् कुर्वन्ति ('the gods perform salutation of the Motherland'). The SAME genitive भारतमातुः appears, yet वन्दे मातरम् uses the accusative. What single distinction explains why the SAME idea (salute the Motherland) takes different cases here?

- (A) What governs the case is the word the noun depends on: the finite verb वन्दे directly takes its object in the accusative (मातरम्), whereas the action-NOUN वन्दनम् takes a genitive complement ('salutation OF the Motherland'), so भारतमातुः is genitive — the difference is verb-government vs noun-complement, not a change in meaning.
- (B) The difference is that भारतमातुः is plural here and मातरम् singular, so number forces different cases.
- (C) The difference is that कुर्वन्ति is passive while वन्दे is active, so the object switches to genitive under the passive.
- (D) There is no real difference; भारतमातुः in the gods-sentence is actually accusative, just spelled like a genitive.

14. चरणौ ('two feet') and a hypothetical चरणाः ('many feet') differ only in the ending. A student says: 'since a person has exactly two feet, चरणौ and चरणाः would mean the same in practice, so the ending is redundant here.' Why does the chapter's dual/plural distinction make the ending NOT redundant?

- (A) Because Sanskrit has no plural for body-parts, चरणाः is impossible, so only the dual exists and the ending is trivially forced.
- (B) Because the dual and plural endings are identical in Sanskrit, the student is right that the choice is redundant.

(C) Because -औ here is actually a singular, naming one foot, so it does differ from a plural but not as a dual.

(D) Sanskrit grammatically marks 'exactly two' (dual -औ) distinctly from 'three or more' (plural), so चरणौ asserts precisely the pair of feet while चरणाः would assert three-or-more — the ending carries number information the meaning does not supply, and choosing dual is what correctly fits a two-footed referent.

15. स्वेदबिन्दुभिः सिञ्चन्ति uses instrumental -भिः. A learner argues: 'the drops do the watering, so the drops are the real agent; -भिः must therefore be marking the subject.' Untangle the roles the chapter assigns.

(A) Correct: the drops are the agent, so -भिः is the agent-marker and the farmers are only the location of the action.

(B) The grammatical subject (agent) is the farmers, carried by the verb सिञ्चन्ति and the nominative कृषक(बान्धव)-, while स्वेदबिन्दुभिः is the instrumental MEANS ('by means of sweat-drops') — the drops are the instrument the agents use, not the agent, so -भिः marks means and not the subject.

(C) The drops are the object being watered, so -भिः is accusative, and the farmers water the drops.

(D) The drops are the possessor, so -भिः is genitive ('of the drops'), and the watering has no stated means.

16. आनन्द ('bliss') has a long आ; carelessly shortening it yields the spurious अनन्द. A learner generalises: 'so only the आ/अ pair is meaning-bearing; the इ/ई and उ/ऊ pairs are just spelling variants.' Apply the chapter's मात्रा principle to judge this.

(A) Correct: only आ/अ carries meaning because आ is the sole vowel with two मात्राः; इ, ई, उ, ऊ all share one मात्रा.

(B) Wrong, but only because इ and उ have no long counterparts, so the pairs the learner names do not exist.

(C) Every short/long pair differs by duration (one मात्रा vs two) and is meaning-bearing, not just आ/अ — so इ vs ई and उ vs ऊ are likewise distinct sounds that can change a word's identity, and the learner's restriction to a single pair is wrong.

(D) Correct in spirit: length matters for आ but for इ/उ it changes only gender, never the core meaning.

17. A student splits रत्नाकरः as रत्न + आकरः and asks why the seam shows a single long आ rather than two separate vowels अ + आ. What does the chapter's view of joins predict here?

(A) The seam shows आ because आकर actually begins with आ and रत्न ends in a consonant, so no fusion happens and the vowels never met.

(B) The seam shows आ because अ + आ fuses to ए, which is then written as आ for short.

(C) The seam shows आ by accident of spelling; there is no rule, so the split cannot be recovered.

(D) At the seam रत्न(अ) + आकर, a final short अ meets an initial long आ and they coalesce into a single long आ (अ + आ → आ); so the visible long आ is the fused outcome, and to split the compound one restores the underlying boundary by undoing that vowel-fusion.

18. The poem builds Himalaya-as-crown, ocean-washing-feet, crop-green body, and holy places. A reader proposes: 'these are four independent compliments that could be reordered or dropped without affecting the central figure.' Why does the chapter's reading resist this?

(A) Because the four images are arranged in strict chronological order narrating Bharat's history, so reordering would falsify the timeline.

(B) The four images cohere as one extended personification — the land IS the Mother's body — so crown-at-head, washing-at-feet, green-fertile-body and sacredness-throughout jointly compose a single head-to-foot-and-in-spirit portrait; remove or scatter them and the unified figure of the living Motherland is diminished, not merely shortened.

(C) Because each image names a different deity, so dropping one would omit a god from the hymn.

(D) Because the images are literal geography only, so the reader is right that they are independent and interchangeable.

19. A teacher gives 'I salute the jewel-mine-rich, mountain-king-crowned Mother' and asks for the version with full case-agreement (treating रत्नाकरयुक्ताम् and पर्वतराजमुकुटाम् as feminine adjectives of the object). Which is correct?

(A) वन्दे रत्नाकरयुक्ता पर्वतराजमुकुटा माता

(B) वन्दे रत्नाकरयुक्तैः पर्वतराजमुकुटैः मातरम्

(C) वन्दे रत्नाकरयुक्ताम् पर्वतराजमुकुटाम् मातरम्

(D) वन्दे रत्नाकरयुक्तायाः पर्वतराजमुकुटायाः मातुः

20. मातृ (kinship, feminine ऋ-stem) makes accusative singular मातरम् with short अ in the strong stem, while दातृ (agent, masculine ऋ-stem) makes दातारम् with long आ. A student must form the accusative singular of नप्तृ ('grandson', an agent-type masculine ऋ-stem like दातृ) and of दुहितृ ('daughter', a kinship feminine ऋ-stem like मातृ). Which pair is right?

(A) नप्तरम् (short, kinship pattern) and दुहितारम् (long, agent pattern), reversing which type lengthens.

(B) नप्तारम् (long agent pattern) and दुहितारम् (long), lengthening both because both are ऋ-stems.

(C) नप्तृम् and दुहितृम्, formed by adding -म् directly to the bare stems.

(D) नप्तारम् (grandson, long-आ agent pattern) and दुहितरम् (daughter, short kinship pattern like मातरम्) — the agent-type stem lengthens to नप्तार-, while the kinship-type stem keeps the short दुहितर-.

21. A learner writes नमः मातरम् for 'homage to the Mother', copying वन्दे's accusative onto नमः, AND writes वन्दे मात्रे for 'I salute the Mother', copying नमः's dative onto वन्दे. The learner has made a symmetrical pair of mistakes. State the correction for BOTH at once.

- (A) Both are correct as written, because नमः and वन्दे may freely exchange their cases.
- (B) Both should take the genitive (नमः मातुः and वन्दे मातुः), since salutation always implies 'of'.
- (C) Only the first is wrong: नमः मातरम् should be नमः मात्रे, but वन्दे मात्रे is acceptable.
- (D) The constructions are crossed: नमः is naturally construed with the dative मात्रे ('homage TO the Mother'), and वन्दे takes the accusative मातरम् (the direct object) — so each word's complement-case was wrongly swapped onto the other.

22. The chapter places systematic study of vowel length in the वर्णमात्रा chapter (Ch. 13), yet Ch. 1 raises आनन्द's long आ. A student infers: 'so Ch. 1 must itself be the chapter on vowel length, and the cross-reference is an error.' Give the better account of why Ch. 1 mentions length at all.

- (A) Because vowel length is unique to Ch. 1 and never revisited, the cross-reference to Ch. 13 is indeed a misprint.
- (B) Because Ch. 1 is the chapter on conjugations, vowel length is the only grammar topic it is permitted to mention.
- (C) Because Ch. 13 actually teaches compounds, the length material truly belongs in Ch. 1, confirming the student.
- (D) Ch. 1 flags vowel length only because a concrete word in this very lesson (आनन्द in आनन्दमठः) depends on the long आ for its meaning, so the lesson notes the principle in context and points forward to Ch. 13, where it is treated systematically — Ch. 1 is not itself the length chapter.

23. Reading कृषकबान्धवाः (who water with their sweat) together with सस्यश्यामला (green with crops), the poet invites an inference about the SOURCE of Bharat's greenery. A careless reader, however, credits the greenery to a different cause in the poem. Which option pairs the intended inference with the specific careless error?

- (A) Intended: the greenery is purely a gift of the ocean; careless error: crediting it to the farmers' sweat, which the poem never mentions.
- (B) Intended: the greenery comes from holy places (तीर्थक्षेत्राणि) blessing the soil; careless error: linking it to crops at all.
- (C) Intended: the green abundance is the FRUIT of the farmers' toil (human labour linking सस्यश्यामला to the sweat of कृषकबान्धवाः); careless error: attributing the greenery instead to the ocean's washing of the feet or the Himalaya's snow, i.e. to nature alone with no human role.
- (D) Intended: the greenery is decorative and causeless; careless error: trying to assign it any source whatsoever.

24. In वन्दे मातरम् the two words sit side by side with no vowel-fusion at the seam. A student claims: 'therefore no two adjacent Sanskrit words ever fuse, and sandhi is only a within-

word phenomenon.' Use the chapter's own observation to correct this.

(A) वन्दे sits unchanged before मातरम् only because मातरम् begins with a consonant; had a vowel-initial word followed (e.g. वन्दे इह), the seam could trigger vowel-sandhi — so word-boundary sandhi is real and depends on the sounds meeting, not absent everywhere.

(B) Correct: sandhi never operates across word boundaries, so वन्दे can never change before any following word.

(C) Correct: मातरम् blocks all sandhi because it is an accusative, and accusatives are sandhi-proof.

(D) The student is wrong only because वन्दे is indeclinable and indeclinables alone undergo external sandhi.

25. A student renders सस्यश्यामला as 'the Mother who possesses dark crops' (a बहुव्रीहि, 'one whose crops are dark'), instead of the तत्पुरुष 'dark-green BY crops'. Both readings touch 'crops' and 'dark'. What decisive difference in what the compound DENOTES separates the two analyses, and which does the chapter intend?

(A) There is no difference in denotation; तत्पुरुष and बहुव्रीहि always denote the same thing, so either label is fine.

(B) The chapter intends the तत्पुरुष 'dark-green by/with crops', which denotes the very quality (the Mother is dark-green because of crops); the बहुव्रीहि reading would denote an outside possessor 'one whose crops are dark', shifting the focus from the colour-quality caused by crops to mere ownership of dark crops — a different referential structure the chapter does not use here.

(C) The बहुव्रीहि is intended, because सस्यश्यामला must name an outside person, and तत्पुरुष compounds can never describe the Mother.

(D) The difference is only in gender: the तत्पुरुष is masculine and the बहुव्रीहि feminine, with identical meaning otherwise.

26. वन्दे मातरम् is described as a complete sentence, while मातरम् alone is not. A student counters: 'but माता (the nominative) names the subject, so माता alone should be a complete sentence even if मातरम् is not.' Resolve this.

(A) Neither माता nor मातरम् alone is a complete sentence, because a finite verb is what makes a Sanskrit clause complete by asserting an action; माता is only a subject-naming noun with no predicated action, whereas वन्दे, a finite verb, already contains subject ('I') and asserts the act, so it alone is complete.

(B) Correct: माता alone is a complete sentence because the nominative subject by itself states a complete thought.

(C) Neither is complete because every Sanskrit sentence needs at least one noun and one adjective.

(D) मातरम् alone is in fact complete, since the accusative implies the verb वन्दे and so carries it silently.

27. पर्वतराजः (तत्पुरुष, 'king of mountains') and चन्द्रमुखी (बहुव्रीहि, 'moon-faced one') were contrasted earlier. Now a NEW compound राजपुत्रः must be classified. As a तत्पुरुष it means 'king's son'; as a बहुव्रीहि it could mean 'one whose son is a king'. For the ordinary sense 'a prince (the king's son)', which analysis applies and what fixes it?

- (A) It is a बहुव्रीहि, because any compound containing two nouns must point to an outside referent.
- (B) It is a द्वन्द्व 'king and son', listing two people, which is what 'prince' means.
- (C) It is neither; राजपुत्रः is a single uncompounded word with no internal members.
- (D) For 'a prince', राजपुत्रः is a तत्पुरुष ('king's son') denoting its own head पुत्रः (the son), with राज- in a hidden genitive — context fixes the तत्पुरुष because the word names the son himself, not some outside person possessing a king-son.

28. स्वेदबिन्दुभिः is instrumental plural. If the poem instead said the farmers water the land 'with a single stream of sweat' using the singular स्वेदधारया, what would change grammatically, and what would NOT?

- (A) Both case and role change: the singular forces the word into the accusative as the object watered.
- (B) The case stays instrumental (means), but the number changes from plural (-भिः) to singular (-या on the आ-stem धारा), and the gender shifts to feminine — so the role 'by means of' is unchanged while the form reflects one stream rather than many drops.
- (C) Nothing changes; स्वेदधारया and स्वेदबिन्दुभिः are identical in case, number and gender.
- (D) The case becomes genitive in the singular, because singular means-words in Sanskrit are expressed by 'of'.

29. A student offers a 'minimal-change' theory: 'to turn any nominative into the accusative you just add -म्; माता → मातम्, सीता → सीतम्, फलम् → फलम्.' Test this against the chapter's forms and identify the theory's core flaw.

- (A) The theory is false because accusative formation depends on the stem-class: ऋ-stem मातृ strengthens to मातर- before -म् (मातरम्, not मातम्); आ-stem सीता becomes सीताम् (long आ + म्), not सीतम्; and neuter फलम् is already both nominative and accusative singular, so adding another -म् is wrong — there is no single 'add -म्' rule across classes.
- (B) The theory is correct; मातम्, सीतम् and फलम् are the proper accusatives, just rarely printed.
- (C) The theory fails only for मातृ; सीतम् and फलम् are correct accusatives of their stems.
- (D) The theory fails only because -म् should be -आम् everywhere, giving मातआम्, सीताम् and फलआम्.

30. जिज्ञासा drives the lesson's frame: a mother explains the song to children who wish to know its meaning. A student argues: 'जिज्ञासा is therefore just the children's emotion and has no bearing on the GRAMMAR of वन्दे मातरम्.' Is the student right, and what is the precise relation?

(A) The student is wrong: जिज्ञासा is what makes वन्दे govern the accusative मातरम्, so it is grammatically load-bearing.

(B) The student is wrong: जिज्ञासा is the verb of the sentence and means 'I wish to salute', controlling the object.

(C) The student is wrong: जिज्ञासा is a case-ending on मातरम् marking the children's curiosity.

(D) The student is right that जिज्ञासा does not govern any grammar of वन्दे मातरम् — it is the narrative motive (curiosity) that triggers the explanatory dialogue, a structural/plot element, not a grammatical force on the verb or its object.

31. A learner produces वन्दे मातरि intending 'I salute the Mother', reasoning '-इ is a clear case-ending so it must work as the object form.' Identify the case मातरि actually is and why it cannot serve as वन्दे's object.

(A) मातरि is the accusative singular, so it is in fact a correct object form alongside मातरम्.

(B) मातरि is the instrumental singular ('by the Mother'), and instrumentals can serve as objects of वन्दे.

(C) मातरि is the nominative singular, the subject form, so it makes the Mother the one saluting.

(D) मातरि is the LOCATIVE singular ('in/at the Mother'), which expresses location, not the thing acted upon; वन्दे requires its object in the accusative मातरम्, so a locative cannot fill the object slot.

32. देशभक्तः and धर्मभक्तः share the head भक्तः and differ only in the first member (देश vs धर्म). A student forms मातृभक्तः on the same pattern and glosses it 'a devotee whom the Mother loves'. Evaluate the gloss against the तत्पुरुष structure.

(A) Correct: मातृभक्तः means 'a devotee whom the Mother loves', because the first member names the one who feels affection.

(B) Wrong, but it means 'the Mother's devotion', a noun naming the feeling, not any person.

(C) Wrong gloss: as a तत्पुरुष parallel to देशभक्तः, मातृभक्तः means 'one devoted TO the Mother' (the Mother is the object of the devotion), not 'a devotee whom the Mother loves' — the first member names what the devotion is directed at, and the head भक्तः denotes the devotee.

(D) Wrong, but it means 'a devotee and a mother', a द्वन्द्व listing two people.

33. A student claims a useful shortcut: 'in any वन्दे X sentence, whatever word follows वन्दे is automatically the accusative object, so I never need to check the ending.' Construct the counterexample the chapter's grammar predicts and state the lesson.

(A) The shortcut is correct: position after वन्दे is sufficient, since Sanskrit fixes case by word-order.

(B) The shortcut fails only for verbs; after वन्दे every NOUN is guaranteed accusative regardless of ending.

- (C) The shortcut fails because the word after वन्दे could be an adverb, a vocative, or a wrongly-cased noun that is NOT a valid accusative object — e.g. वन्दे मातः (vocative 'O Mother') addresses rather than takes the Mother as object; only a properly accusative form like मातरम् is the object, so the ending must be checked, not the mere position.
- (D) The shortcut fails because वन्दे must always be followed by a verb, never a noun, so no noun can be its object.

34. The chapter ties आनन्दमठः ('Abbey of Bliss') to the long आ of आनन्द. A student proposes that the SAME word, if its मठ member were lengthened to माठ, would 'just be a longer-sounding abbey, same meaning'. Apply the length principle to the second member too.

- (A) Correct: only the FIRST member's vowel length matters; the second member's length is free to vary without meaning change.
- (B) Correct: मठ and माठ are guaranteed synonyms, since lengthening a consonant-flanked vowel never changes meaning.
- (C) Length is meaning-bearing in every member, so lengthening मठ ('abbey/monastery') to माठ does not yield a 'longer-sounding abbey' but risks a different or non-word — one cannot assume the sense survives a vowel-length change in the second member any more than in the first (आनन्द vs अनन्द).
- (D) Wrong, but only because मठ has no long-vowel variant, so माठ cannot be written at all.

35. वन्दे (ātmanepada -ए) and वन्दामि would be the first-singular forms in the two pada-systems. The chapter uses वन्दे. A student writes वन्दामि for the song's opening, defending it as 'just the parasmaipada equivalent, identical in meaning'. What is the correct judgement on form and on the song's text?

- (A) वन्दामि is correct and is in fact the form the song uses; वन्दे is the rare poetic variant.
- (B) Meaning-wise both would render 'I salute', but the root वन्द् is ātmanepada, so its grammatically proper first-singular is वन्दे, and the song's actual text is वन्दे — so वन्दामि is the wrong pada for this root and not the form the song uses.
- (C) वन्दामि means 'we salute' (plural), so it cannot replace the singular वन्दे on number grounds.
- (D) वन्दामि is a different tense (past) of the same root, so it changes the time, not the person.

36. A reader insists that since the poem calls the Himalaya पर्वतराजः ('king of mountains'), Bharat must be subordinate to the Himalaya, 'because a king outranks whatever he crowns'. Why does the chapter's imagery defeat this inference?

- (A) The Himalaya is imagined as Bharat's CROWN (मुकुटरूपेण) — an ornament adorning the Mother's head — so the royal title पर्वतराजः glorifies the mountain precisely as a jewel in HER crown, exalting the Motherland rather than subordinating her to the mountain.
- (B) Because पर्वतराजः actually means 'servant of mountains', the Himalaya is the subordinate, confirming Bharat's rank by the title's literal sense.

(C) Because a crown sits at the feet, the Himalaya is beneath Bharat, so the title is ironic.

(D) Because पर्वतराजः refers to the ocean, not the Himalaya, the king-image has nothing to do with Bharat's head.

37. Given माता (nom. sg.), मातरम् (acc. sg.), मातुः (gen. sg.), मात्रा (inst. sg.), मातरि (loc. sg.), a student must pick the form for 'by the Mother (as the means/agent)'. Which is right, and why are two nearby forms tempting traps?

(A) मात्रा is the instrumental singular, used for 'by/with the Mother' (means/agent); the traps are मातरम् (accusative, the object, not the means) and मातुः (genitive, 'of the Mother', possession, not the means).

(B) मातरि (locative) is right, since 'by the Mother' marks the place of the action.

(C) मातुः (genitive) is right, because 'by' in Sanskrit is always expressed with the genitive.

(D) मातरम् (accusative) is right, because the means is the same as the object in Sanskrit.

38. तीर्थक्षेत्राणि ('holy places') is neuter plural. A student says its -आणि ending 'must be a feminine plural like the -आः we saw on बान्धवाः'. Correct the gender/number reading and explain what -आणि signals.

(A) Correct: -आणि is a feminine plural ending, so तीर्थक्षेत्राणि is feminine plural like बान्धवाः.

(B) -आणि is the neuter SINGULAR ending, so तीर्थक्षेत्राणि means a single holy place.

(C) -आणि (in तीर्थक्षेत्राणि) is the NEUTER nominative/accusative plural ending of the neuter अ-stem क्षेत्र — quite different from the masculine nominative plural -आः on बान्धवाः; so the word is neuter plural ('holy places'), not feminine.

(D) -आणि is the genitive plural, so the word means 'of the holy places'.

39. A student translates वन्दे मातरम् as 'I salute my mother (the woman at home)'. The chapter rejects this on TWO independent grounds. A second student then 'fixes' it to 'I love my mother at home', changing only the verb. How many of the two original grounds does this fix actually repair?

(A) It repairs one ground: the verb is now correct ('love'), leaving only the referent error.

(B) It repairs both grounds, since 'love my mother at home' is the chapter's intended sense.

(C) It repairs the referent ground, because 'love' implies the domestic mother, fixing who 'Mother' is.

(D) It repairs NEITHER ground correctly: the verb 'love' is still wrong (वन्दे means salute/revere, not love), and the referent is still wrong (the 'Mother' is the personified Motherland भारतमाता, not the domestic mother) — so changing 'salute' to 'love' both keeps a mistranslated verb and leaves the referent error untouched.

40. In समुद्रः ... चरणौ प्रक्षालयति the verb प्रक्षालयति is singular though the object चरणौ is dual. A student protests: 'two feet are washed, so the verb should be dual प्रक्षालयतः.' Resolve the agreement.

- (A) The student is right: the verb agrees with the object, so it must be the dual प्रक्षालयतः.
- (B) The verb should be plural प्रक्षालयन्ति, agreeing with the plural sense of 'feet'.
- (C) The verb should be first-person प्रक्षालयामि, because washing is done on behalf of the speaker.
- (D) A Sanskrit finite verb agrees with its SUBJECT in number, not with its object; the subject is समुद्रः (singular), so the verb is singular प्रक्षालयति — the dual चरणौ is the object and does not control verb-number.

41. रत्नाकरः (रत्न + आकर, fused at अ + आ → आ) and देवालयः (देव + आलय, 'temple') share the SAME seam-fusion. A student splitting देवालयः proposes the members were देवा + लयः ('dissolution of gods'). Why is this split wrong, and what is the right one?

- (A) The split देवा + लयः is correct: देवालयः really means 'the dissolution of the gods'.
- (B) The split should be देव + आलयः but it means 'a god who is an abode', a बहुव्रीहि.
- (C) The seam आ in देवालयः comes from देव(अ) + आलय (अ + आ → आ), so the members are देव ('god') + आलय ('abode'), giving 'abode of god(s)' (temple); the split देवा + लयः misplaces the boundary and invents wrong members, ignoring that the long आ is the fused output of अ + आ.
- (D) The word cannot be split because आ at a seam is never the result of fusion.

42. A student claims the song's whole grammatical force could be preserved by writing it as मातरम् वन्दे instead of वन्दे मातरम्, 'and also by माता वन्दे, since word order is free in Sanskrit'. Which half of this claim is right and which is wrong?

- (A) Both are fine, since free word order in Sanskrit also frees the case of the object.
- (B) मातरम् वन्दे preserves the force (word order is indeed relatively free, and मातरम् stays the accusative object), but माता वन्दे is wrong because माता is nominative — reordering does not license changing the object's CASE; only the accusative मातरम् can be वन्दे's object whatever its position.
- (C) Both are wrong, because वन्दे must come first in the sentence or it loses its meaning.
- (D) मातरम् वन्दे is wrong (the object must follow the verb) but माता वन्दे is right.

43. A student notes both सस्यश्यामला (सस्य + श्यामला) and देशभक्तः (देश + भक्तः) are तत्पुरुष and concludes 'so their member-relations are identical: first member is the instrument in both.' Distinguish the two तत्पुरुष relations.

- (A) Correct: in both the first member is the instrument, so the relations are identical.
- (B) They differ because देशभक्तः is actually a बहुव्रीहि, so only सस्यश्यामला is तत्पुरुष.
- (C) They differ only in gender; the member-relation (instrument) is the same in both.
- (D) They are different sub-types: सस्यश्यामला is an instrumental तत्पुरुष ('dark-green BY crops', first member = means), while देशभक्तः is an objective/dative-type तत्पुरुष ('devoted TO the country', first member = the object/goal of the devotion) — both are तत्पुरुष but the hidden case-relation between the members differs.

44. Final synthesis on author/source/frame. A single statement must be correct on (a) the composer, (b) the work it first appeared in and its date, (c) what an उपन्यासः is, and (d) why

the song appearing inside it matters. Which is fully correct?

- (A) Composed by Rabindranath Tagore; appearing in a play of the 1900s; an उपन्यासः is a song; and its setting matters because plays are always anonymous.
- (B) Composed by Bankim Chandra Chattopadhyay; first appearing in his novel आनन्दमठः (1882); an उपन्यासः is a novel; and its appearing inside a novel matters because the hymn's patriotic feeling is embedded in a larger narrative, giving it a story-context rather than standing as an isolated verse.
- (C) Composed by the two children of the lesson; appearing in a Vedic hymn of the 12th century; an उपन्यासः is a mountain; and its setting matters because hymns predate novels.
- (D) Composed by Bankim Chandra; appearing in आनन्दमठः (1947); an उपन्यासः is a poem; and its setting matters because it proves the song has no author.

45. A student argues: 'मातरम् and the neuter फलम् both end in -म्, so they share the same case; since फलम् can be nominative, मातरम् can be nominative too.' Pinpoint the flaw in this cross-stem reasoning.

- (A) Correct: -म् always marks the same case, so मातरम् can indeed be nominative like फलम्.
- (B) Identical surface -म् does not imply identical case across different stem-types: neuter अ-stem फलम् is nominative/accusative (the -म् is the neuter nom./acc. marker), whereas in the feminine ऋ-stem मातरम् the -म् is the ACCUSATIVE-singular marker and the nominative is माता (no -म्) — so the same letter plays different roles in different declensions and cannot be read off uniformly.
- (C) The flaw is only that फलम् is feminine, not neuter, so the comparison fails on gender alone.
- (D) The flaw is that मातरम् is genitive, not accusative, so neither word is nominative.

46. The poem honours कृषकबान्धवाः who water the soil with sweat. A student infers a hierarchy: 'since farmers are merely the Mother's children/brethren, the poem ranks them below the Himalaya and ocean, which are her crown and washers.' Why does the chapter's logic NOT support this ranking?

- (A) Because the farmers are explicitly called greater than the Himalaya, the ranking is simply reversed.
- (B) The poem integrates farmers, mountains and seas into ONE honouring portrait without ranking them: the farmers' sweat is the very cause of the crop-green abundance the hymn praises, so their toil is celebrated on a par with the natural grandeur, not subordinated to it.
- (C) Because the poem never mentions farmers, there is no one to rank, so the inference has no basis.
- (D) Because the ocean and Himalaya are the farmers' servants, the hierarchy runs opposite to the student's claim.

47. A learner forms the accusative of the masculine अ-stem हिमालय as हिमालयम् (वन्दे हिमालयम्), and then assumes 'so the accusative of the feminine ऋ-stem मातृ is likewise stem + म् = मातृम्'. Why does the same -म् attach so differently?

- (A) Because मातृ is masculine like हिमालय, both simply add -म्, so मातृम् is correct.
- (B) Because feminine nouns never take -म् in the accusative, मातृ uses -आम् instead, giving मात्राम्.
- (C) Because the accusative of हिमालय is really हिमालयः, the comparison is void and मातृम् stands.
- (D) For the अ-stem हिमालय the accusative is stem + म् (हिमालय + म् → हिमालयम्) with no stem-change, but the ऋ-stem मातृ first strengthens to मातर- before -म् (giving मातरम्), so the -म् attaches to a CHANGED stem — different declensions require different stem-treatments before the same ending.

48. A student claims that because the poem personifies Bharat as a Mother, 'every feminine word in the lesson must therefore be in the accusative, since the Mother is always the object'. Expose the error using the chapter's own forms.

- (A) Personifying Bharat as Mother does not force every feminine word into the accusative; case is fixed by each word's ROLE in its sentence — e.g. भारतमातुः (genitive, 'the Mother's feet') and माता (nominative, citation/subject) are feminine yet not accusative, while मातरम् is accusative only because it is वन्दे's object.
- (B) Correct: once Bharat is the Mother, all feminine words referring to her are accusative objects.
- (C) The error is only that some feminine words are masculine, so they escape the accusative on gender grounds.
- (D) The error is that the Mother is the subject, so all her words are nominative, not accusative.

49. Multi-axis. Identify the statement that is simultaneously correct on (a) the case-role of चरणौ, (b) the case-role of स्वेदबिन्दुभिः, (c) the case-role of भारतमातुः, and (d) the head of कृषकबान्धवाः.

- (A) चरणौ is the accusative-dual object (the two feet washed); स्वेदबिन्दुभिः is the instrumental-plural means ('with sweat-drops'); भारतमातुः is the genitive of possession ('the Mother's'); and the head of कृषकबान्धवाः is बान्धव ('brethren'), the last member.
- (B) चरणौ nominative subject; स्वेदबिन्दुभिः genitive possessor; भारतमातुः accusative object; head of कृषकबान्धवाः is कृषक.
- (C) चरणौ accusative dual; स्वेदबिन्दुभिः instrumental means; भारतमातुः nominative subject; head is कृषक.
- (D) चरणौ genitive dual; स्वेदबिन्दुभिः accusative object; भारतमातुः instrumental means; head is बान्धव.

50. A student proposes a 'rule': 'the longer a Sanskrit word, the more likely it is a compound; so मातरम् (long) is a compound but माता (short) is simple.' Why is this length-based heuristic worthless here, and what actually distinguishes a compound?

(A) Word-length is irrelevant to compoundhood: मातरम् and माता are both single-stem (मातृ) inflected forms, differing only by case-ending, with no two lexical members — whereas a compound like देशभक्तः joins two distinct meaning-bearing members (देश + भक्तः); so what makes a compound is having multiple members, not being long.

(B) Correct: मातरम् is a compound (मात + अरम्) and माता is simple, just as length predicts.

(C) The heuristic is fine; only the example is off, because माता is the real compound and मातरम् the simple form.

(D) Length does decide it, but the threshold is three syllables, so both मातरम् and माता are simple.

51. Reconsider वन्दे मातरम् सुजलाम् सुफलाम्. A student says: 'सुजलाम् and सुफलाम् could each be the object of an implied separate वन्दे, so they need not agree with मातरम् — they are independent accusatives.' Why does the chapter's reading make them dependent adjectives rather than independent objects?

(A) Correct: each -आम् word is an independent accusative object, so the line salutes three different things.

(B) They are independent because adjectives in Sanskrit never agree with their nouns in case.

(C) सुजलाम् and सुफलाम् are adjectives QUALIFYING मातरम् (well-watered, well-fruited Mother), agreeing with it in feminine accusative singular; reading each as an independent object of a hidden वन्दे would wrongly multiply the saluted entities, whereas the natural reading salutes one Mother described by these qualities — agreement, not independence, is what the forms and sense indicate.

(D) They must be genitive, modifying मातरम् as 'of the well-watered one', not accusative.

52. A student writes नमो भारतमात्रे and वन्दे भारतमातरम् as two correct lines, then 'simplifies' by claiming 'भारतमात्रे and भारतमातरम् are the same Mother, so the endings -त्रे and -तरम् are interchangeable spellings.' Why are the endings NOT interchangeable?

(A) They are different CASES required by different governing words: नमः licenses the dative भारतमात्रे ('homage TO the Mother'), while वन्दे takes the accusative भारतमातरम् (the object saluted) — same referent, but the case (and thus the ending) is fixed by the construction, so they cannot be swapped.

(B) Correct: since both name the same Mother, -त्रे and -तरम् are free spelling variants.

(C) They differ only in number: भारतमात्रे is plural and भारतमातरम् singular.

(D) They are interchangeable because both नमः and वन्दे govern the dative.

53. A reader says: 'the poem could replace रत्नाकरः with the plain समुद्रः and पर्वतराजः with the plain हिमालयः with NO loss, since the epithets and the plain words point to the same things.' What does the chapter's view of epithets say is lost?

- (A) The plain words name the referents but drop the PRAISE the epithets carry: रत्नाकरः ('mine of jewels') and पर्वतराजः ('king of mountains') ennoble the sea and the mountain, glorifying the Motherland through honorific description — so swapping in समुद्रः/हिमालयः preserves reference but loses the laudatory, personifying force central to the hymn.
- (B) Nothing is lost, because poetry values only the referent, never the manner of naming.
- (C) The grammar would break, since समुद्रः and हिमालयः cannot be subjects or objects in any sentence.
- (D) The meaning would reverse, because समुद्रः means 'mountain' and हिमालयः means 'ocean'.

54. Apply three chapter principles at once — compound-splitting, vowel-length, and case-government — to judge which combined analysis is sound.

- (A) रत्नाकरः cannot be split; the seam आ is cosmetic; and वन्दे governs the genitive मातुः.
- (B) रत्नाकरः = 'a king of jewels' (बहुव्रीहि); आ and अ are interchangeable; and वन्दे takes the nominative माता.
- (C) रत्नाकरः = रत्न + नाकरः ('jewel-less'); vowel length never matters; and वन्दे takes the dative मात्रे.
- (D) रत्नाकरः = रत्न(ानाम्) + आकरः ('mine of jewels', a genitive तत्पुरुष for the ocean), with the seam आ being the meaning-bearing fusion of अ + आ (so length matters); and वन्दे governs its object in the accusative (मातरम्), not the genitive.

55. A student declares: 'since वन्दे already contains the subject I, adding a separate अहम् ("I") would be ungrammatical; अहम् वन्दे मातरम् is simply wrong.' Is the student right?

- (A) Yes — including अहम् double-marks the subject, which Sanskrit strictly forbids, so the sentence is ungrammatical.
- (B) Yes — अहम् is accusative, so it would clash with मातरम् as a second object.
- (C) No — the subject is built into वन्दे, but adding the explicit pronoun अहम् ('I') for emphasis is permissible, not ungrammatical: अहम् वन्दे मातरम् is acceptable, with अहम् reinforcing the already-implied subject rather than conflicting with it.
- (D) No — but only because अहम् actually means 'the Mother', so it merely repeats मातरम्.

56. The chapter's portrait makes the land itself the Mother's body. A student extends this: 'so rivers in the poem would naturally be her veins or her flowing hair, by the same body-mapping logic.' Is this extension faithful to the chapter's method, even though rivers-as-veins is not stated?

- (A) It is unfaithful, because the chapter forbids extending its imagery beyond the exact features it names.
- (B) It is faithful in METHOD: the chapter's technique is to map features of the land onto parts of a single living body (Himalaya = crown at the head, ocean = washing the feet, crops = green body), so imagining rivers as veins/flowing hair applies the same personifying body-mapping — though the specific image is the student's extrapolation, not a stated line of the lesson.
- (C) It is unfaithful, because the chapter treats the land as lifeless geography, not a body.
- (D) It is faithful only if rivers are mapped to the crown, since the head is the sole body-part the poem uses.

57. A learner conjugates 'you (sg.) salute' from वन्द् and writes वन्दसे, then claims 'this proves वन्द् is parasmaipada, since -से is a parasmaipada ending'. Diagnose the error in the learner's INFERENCE (not necessarily the form).

- (A) The inference is wrong: -से is the ātmanepada second-singular ending, and वन्दसे is the correct ātmanepada 'you salute', consistent with वन्दे (1 sg.) and वन्दते (3 sg.) — so the form actually CONFIRMS वन्द् is ātmanepada, the opposite of what the learner concluded.
- (B) The inference is right: -से is parasmaipada, so वन्द् is parasmaipada, contradicting वन्दे.
- (C) The form is wrong: 'you salute' should be वन्दसि, a parasmaipada ending, so वन्द् is parasmaipada.
- (D) The inference is wrong only because -से marks the third person, so वन्दसे means 'he salutes'.

58. A teacher asks for the version of 'I salute the holy-place-bearing, farmer-cherishing Motherland' with full agreement, treating तीर्थक्षेत्रयुक्ताम् and कृषकवत्सलाम् as feminine adjectives. Which is correct?

- (A) वन्दे तीर्थक्षेत्रयुक्ताम् कृषकवत्सलाम् भारतमातरम् (B) वन्दे तीर्थक्षेत्रयुक्ता कृषकवत्सला भारतमाता
- (C) वन्दे तीर्थक्षेत्रयुक्तायाः कृषकवत्सलायाः भारतमातुः (D) वन्दे तीर्थक्षेत्रयुक्तैः कृषकवत्सलैः भारतमातरम्

59. A student maps the song's geography onto a compass and asserts: 'crown at the head = north works only if Bharat faces the reader; if she faced away, the Himalaya would be at her feet, so the crown-image is direction-ambiguous.' Why is the chapter's head=north mapping NOT ambiguous in this way?

- (A) Because the poem explicitly states Bharat faces the reader, removing the ambiguity by that stipulation alone.
- (B) Because north and south are interchangeable in the poem, so the mapping is genuinely ambiguous but harmless.

(C) The image fixes the BODY-orientation directly: the head (crown) is the top/north and the feet (sea-washed) the bottom/south by the very structure of a standing body, so the Himalaya in the north corresponds to the head and the southern seas to the feet regardless of which way one imagines her 'facing' — the head-to-foot axis is vertical/north-south, not a front-back facing issue.

(D) Because the Himalaya is actually in the south, so head=south resolves the supposed ambiguity.

60. Comprehensive synthesis. Choose the single statement correct on ALL of: verb force, object case, ONE compound's type-and-meaning, the instrumental phrase's role, and the author.

(A) वन्दे is passive 'is saluted' with nominative माता; सस्यश्यामला is a बहुव्रीहि 'snow-white one'; स्वेदबिन्दुभिः is genitive 'of the drops'; author Tagore.

(B) वन्दे is the active first-singular 'I salute' governing the accusative object मातरम्; सस्यश्यामला is a तत्पुरुष meaning 'dark-green with crops'; स्वेदबिन्दुभिः is the instrumental of means ('with sweat-drops'); and the line is by Bankim Chandra Chattopadhyay.

(C) वन्दे means 'I love' with genitive मातुः; सस्यश्यामला is a द्वन्द्व 'crops and darkness'; स्वेदबिन्दुभिः is nominative 'the drops water'; author the children.

(D) वन्दे is third-plural 'they salute' with dative मात्रे; सस्यश्यामला is an uncompounded synonym for 'green'; स्वेदबिन्दुभिः is accusative 'the drops watered'; author unknown.

Solutions — Sanskrit (Class 7), Chapter 1: वन्दे भारतमातरम् (Vande Bharatamataram) — Paper 5

Paper 5 — (progressively harder)

Marking: +4 correct, –1 wrong, 0 unattempted. Maximum marks **240**.

Answer-key distribution: A = 15, B = 15, C = 15, D = 15.

Worked Solutions

1. (B) The chapter glosses वन्दे as 'I salute/revere' — a present-indicative, first-person-singular ātmanepada verb. Two features settle the matter at once. First, the action is asserted as actually happening (indicative), not merely wished for, so the optative 'may I salute' is excluded; the form carries no wish-mood. Second, the agent 'I' is built into the personal ending, so the speaker is the one performing the salutation; there is no passive construction making the Mother the agent of being saluted. The passive reading would require a different morphology and would put the Mother in the nominative as the thing-saluted, which is not what we have — मातरम् is accusative, the object. The claim that वन्दे carries no person is false: ātmanepada -ए is precisely the first-singular marker. The imperative idea fails because an imperative would address the Mother as 'you', not state 'I' as agent. Only one fact — that the form is a present-indicative finite verb with the agent inside — knocks out both the passive and the optative together.

2. (C) Sanskrit builds case-forms from the STEM, here मातृ, an ऋ-ending feminine. The nominative singular माता is itself an output of that stem and is not the base for further

endings; treating माता as a base is the first error. The second error is mechanical: the accusative singular is not stem-plus-म् mechanically, because ऋ-stems strengthen in the strong cases — मातृ becomes मातर-, which then takes -म्, yielding मातरम्. So मातम् both starts from the wrong piece (the nominative) and omits the strengthening step. The option claiming मातम् is correct and only the verb is at fault inverts reality: वन्दे demands an accusative object, and the correct accusative is मातरम्, not a nominative. The dual idea (मातरौ) is irrelevant — the meaning is one Mother, so singular is wanted. The -आम् idea confuses the feminine adjective ending (श्यामला → श्यामलाम्, where the long आ belongs to the आ-stem) with the ऋ-stem noun, which does not take -आम् in the accusative singular. Only the option naming both the wrong base and the missing strengthening is fully right.

3. (C) This question tests whether a learner can resist over-correcting a CORRECT observation. मातरम् and मातरौ genuinely share the strengthened stem मातर-, and number is signalled by the ending attached: -म् for accusative singular, -औ for accusative dual. The only refinement worth making is to keep singular vs dual straight, which the student already had right in substance. The distractor inventing a stem मातार- is false — that long-आ strengthening belongs to agent ऋ-stems like दातृ → दातारम्, not to kinship मातृ, whose strong stem is मातर-. The claim that -औ is plural is the standard dual/plural trap: -औ is dual (exactly two); plurals appear as मातरः (nom.) etc. The claim that -म् is nominative ignores that the nominative singular is माता with no -म्. So the only fully sound statement affirms the shared stem and merely pins the numbers correctly.

4. (D) The deep point is that how a word selects its complement's case is a fact stored with that individual word (its government), not something deducible merely from its meaning ('salute') or from its grammatical class ('verb' or 'indeclinable'). The chapter gives two concrete data points: वन्दे takes a direct object in the accusative, and नमः is naturally construed with a dative of the one honoured. Promoting these to a sweeping rule — 'all salute-verbs → accusative, all salute-indeclinables → dative' — overreaches, because other words could behave differently; the data underdetermine such a law. The swapped-labels distractor is factually wrong: वन्दे is the finite verb, नमः the indeclinable. The genitive distractor is wrong because नमः pairs with dative ('homage TO') and वन्दे with accusative (the object), not genitive. The claim that dative and accusative are one case is simply false — they are distinct, with distinct endings (e.g. मात्रे dative vs मातरम् accusative). Hence the only sound inference is that government is word-specific.

5. (C) All four are ātmanepada forms of root वन्द्, differing by the personal ending. वन्दे = 1st singular ('I salute'). वन्दते = 3rd singular ('he/she salutes'). वन्दामहे = 1st plural ('we salute'). वन्दन्ते = 3rd plural ('they salute'). For 'they (all) salute' the answer is वन्दन्ते. The instructive design is that each distractor fails on its own axis: वन्दामहे has the right plural number but wrong person (1st, not 3rd); वन्दते has the right person (3rd) but wrong number (singular); वन्दे misses on both, being 1st singular. The distractor that calls -ते a plural ending confuses 3rd-singular -ते with 3rd-plural -न्ते. The claim that 1st-singular वन्दे doubles as 3rd plural is false — Sanskrit keeps these distinct. So only वन्दन्ते matches both person and number.

6. (D) Sanskrit verbs draw their personal endings from sets (पद): parasmaipada and ātmanepada. A given root takes one set (or both, with nuance). सिञ्च is parasmaipada-type, so 'they' is सिञ्चन्ति with -अन्ति; वन्द् is ātmanepada-type, so 'he/she' is वन्दते with -ते (and 'they' would be वन्दन्ते). Both -अन्ति and -ते encode third person — the difference is the ending-SET, governed by the root's class/pada, not a difference in tense; both verbs here are present. The tense distractor invents a past for वन्दते, which is present. The 'only one set' distractor denies the existence of pada, contradicting the very contrast vowel given. The misprint distractor assumes all 3rd persons must look identical, which is exactly the misconception under test. So the correct statement attributes the contrast to different ending-sets at the same (third) person.

7. (B) Adjective–noun agreement is the unifying principle: an adjective copies the case, number and gender of the noun it qualifies. Since मातरम् is the accusative-singular-feminine object of वन्दे, सुजलाम्, सुफलाम् and सस्यश्यामलाम् must all be accusative-singular-feminine too. The first version leaves the noun and its three adjectives in their citation (nominative) forms माता / सुजला / सुफला / सस्यश्यामला, so a single error — failure of accusative agreement across the head and its qualifiers — explains all four altered words. The instrumental distractor invents a 'means' role that is absent: nothing here is the instrument of honouring. The 'no single ground' distractor wrongly splits the error into noun-case plus a gender problem; gender is consistently feminine throughout, so gender is not the issue. The 'no object' distractor denies that वन्दे is transitive, contradicting the chapter. Thus one principle, agreement with the accusative head, covers the whole group.

8. (B) The contrast is between a compound that denotes one of its own members (तत्पुरुष) and one that denotes an outside referent characterised by the compound (बहुव्रीहि). पर्वतराजः denotes a king (its head राजा), so it is तत्पुरुष. नीलकण्ठः denotes neither 'blue' nor 'throat' but Shiva, who possesses a blue throat — a बहुव्रीहि pointing outside. देशभक्तः denotes a devotee (head भक्तः) who is country-directed; the whole IS a devotee, so it points inside and is तत्पुरुष, structurally like पर्वतराजः, not like नीलकण्ठः. The बहुव्रीहि distractor mislocates the referent outside (a 'country the devotee belongs to'), but the compound names the devotee himself. The द्वन्द्व distractor wrongly coordinates the members ('country and devotee'), whereas the first member qualifies the head, not coordinates with it. The 'both तत्पुरुष / names first member' distractor is doubly wrong: नीलकण्ठः is बहुव्रीहि, and तत्पुरुष names its LAST (head) member, not its first.

9. (A) An epithet like रत्नाकरः works by describing a salient property — the sea as the source/store of jewels (pearls, corals) — so the reader infers 'ocean' from the descriptive sense and context, not from any concealed instance of the word समुद्र. The 'hidden letters' idea is a category mistake: reference here is semantic, through meaning, not orthographic. The 'forbidden word' distractor invents a non-existent prohibition; poets may use समुद्र freely and choose epithets for richness, not by rule. The 'आकरः alone means ocean' distractor is false: आकरः means 'mine/store' generally (a mine of anything), so it is the

combination रत्न + आकर that picks out the sea; रत्न- is load-bearing, not decorative. Hence the correct account is reference by descriptive property.

10. (B) In a तत्पुरुष the LAST member is the head and fixes what the whole denotes; the preceding member qualifies it. Here बान्धव ('brethren/kinsmen') is the head, कृषक ('farmer') the qualifier, and the inflection rides on the head: बान्धवाः, nominative plural masculine. So the compound denotes brethren who are farmers — exactly what the student said on both counts. The distractor placing the plural on कृषक mislocates inflection, which attaches to the head, not the qualifier. The distractor making कृषक the head reverses the तत्पुरुष head rule. The द्वन्द्व distractor wrongly coordinates the members; a द्वन्द्व would mean 'farmers and brethren' as two separate groups, but here farmers and brethren are not two sets — the farmers ARE the brethren. Hence both halves of the student's claim hold.

11. (A) The model सस्यश्यामला means 'dark/green by means of crops' — the first member gives the cause/instrument, the second the resulting quality. Transferring this instrumental-तत्पुरुष relation to तपःकृशा (तपस् 'austerity' + कृशा 'thin/lean'), the natural sense is 'thin BY/THROUGH austerity', i.e. made lean by penance. The 'queen of austerities' reading imposes a genitive तत्पुरुष ('ruler of') not present in the model. The 'austerity-less' reading smuggles in a negative prefix that the model lacks (there is no अ-). The 'paired together' reading treats the compound as a द्वन्द्व coordinating two things, but the model relation subordinates the first member as the instrument of the second's quality. So the parallel yields 'thin through austerity'.

12. (C) Word-order in Sanskrit does not fix case; endings do. समुद्रः ends in -ः (nominative singular), and it agrees with the singular verb प्रक्षालयति, so it is the subject doing the washing. चरणौ ends in -औ (accusative dual here), naming the two feet that are washed — the object. भारतमातुः ends in the genitive -उः, expressing 'whose feet' — possession. The student's reasoning is positional and therefore wrong on every count: 'first word = accusative', '-औ = subject', 'precedes object = instrumental' are all non-rules. The first distractor keeps two right but re-labels भारतमातुः as instrumental; there is no 'means' here, and -उः is genitive, so it is wrong. The second distractor wrongly keeps समुद्रः accusative and चरणौ nominative, inverting subject and object. The third distractor scrambles all three into instrumental/genitive/nominative, contradicting the endings. Only nominative–accusative–genitive matches the morphology and the verb agreement.

13. (A) The deep idea is that the SAME relation ('the saluting of X') is expressed differently depending on whether the saluting is carried by a finite verb or by a noun. वन्दे, a finite transitive verb, takes a direct object in the accusative: मातरम्. In देवाः भारतमातुः वन्दनम् कुर्वन्ति, the actual finite verb is कुर्वन्ति ('perform'), and the saluting is named by the noun वन्दनम्; an action-noun governs its 'object' as a genitive complement, hence भारतमातुः ('salutation OF the Motherland'). So the controlling factor is what the noun depends on — verb (accusative) or noun (genitive). The number distractor is false: both refer to one Motherland. The passive distractor is false: कुर्वन्ति is active, and even passives in Sanskrit do

not turn objects into genitives in this way. The 'no difference / really accusative' distractor denies the visible genitive ending -उः. Hence the single distinction is verb-government versus noun-complement.

14. (D) Sanskrit has three numbers: singular, dual (exactly two), and plural (three or more). The dual is a real, separately marked category, not absorbed into the plural. So चरणौ specifically means 'the two feet' and would be the correct, precise form for a two-footed Motherland; चरणाः (plural) would assert three or more, which is wrong for feet. The ending is therefore meaning-bearing, not redundant — it encodes 'exactly two', a fact the bare noun does not state. The 'no plural for body-parts' distractor invents a non-rule; plurals of body-part nouns exist. The 'dual and plural identical' distractor is false — they have distinct endings (-औ vs -अः etc.). The 'singular' distractor misreads -औ; -औ on चरण is dual, while a singular would be चरणम्/चरणः-type forms. Hence the dual ending does real work.

15. (B) The agent of an active verb is its nominative subject — here the farmers (कृषकबान्धवाः, with सिञ्चन्ति 'they water'). The sweat-drops are the MEANS through which the farmers accomplish the watering, and means is the instrumental, marked -भिः: 'they water (the land) with sweat-drops'. So although the drops physically do the wetting, grammatically they are the instrument, not the agent; the agent is the human doer. Calling -भिः an agent-marker confuses means with agent and demotes the farmers to mere 'location', which the syntax does not support. The accusative reading would make the drops the thing watered, reversing instrument and patient; the object is the land. The genitive reading ('of the drops') is the classic -भिः/possession confusion: possession would be स्वेदबिन्दूनाम्. Hence -भिः is the instrumental of means, with the farmers as agent.

16. (C) The मात्रा principle assigns one मात्रा to every ह्रस्व (short) vowel and two to every दीर्घ (long) vowel — this applies across the board: अ/आ, इ/ई, उ/ऊ, and so on. So length is meaning-bearing for all such pairs, not uniquely for आ/अ. Swapping इ for ई or उ for ऊ can change a word just as आनन्द → अनन्द does. The 'only आ has two मात्राः' distractor is false — ई and ऊ each have two मात्राः too. The 'no long counterparts' distractor denies the existence of ई and ऊ, which plainly exist. The 'changes only gender' distractor invents a gender-only effect; length can alter the core lexical identity, not merely gender. Hence the learner's restriction is mistaken: all short/long pairs are durational and meaning-bearing.

17. (D) रत्न ends in a short अ (रत्न = र-त्-न-अ) and आकर begins with long आ. When these meet, vowel-sandhi merges a/ā + a/ā into a single long आ (अ + आ → आ). So the one long आ at the seam is the fused product of two underlying vowels, and splitting means recognising the fusion and restoring रत्न + आकर. The 'no fusion / रत्न ends in a consonant' distractor is phonetically wrong: रत्न ends in the vowel अ, so a vowel does meet a vowel. The 'fuses to ए' distractor misapplies the rule for अ/आ + इ/ई → ए; with आ the result is आ, not ए. The 'accident of spelling / cannot recover' distractor denies the regular, reversible sandhi that makes recovery possible. Hence the long आ is the predicted अ + आ → आ coalescence.

18. (B) The chapter reads the images as a single sustained personification: the geography is the Mother's body. The Himalaya crowns her head (north/top), the ocean washes her feet (south/below), the crops make her body green and fertile, and the holy places give her sacred, spiritual worth. Together they form one head-to-foot-and-in-spirit figure of a living Motherland; they are not detachable compliments but parts of one body-image, so reordering or dropping them weakens the unified figure. The 'chronological history' distractor mislabels a spatial body-image as a timeline. The 'different deities' distractor invents gods where the poem personifies the land itself, not a pantheon. The 'literal geography only' distractor concedes the reader's premise and misses the figurative unity the chapter teaches. Hence the images are integrated, not independent.

19. (C) वन्दे takes its object in the accusative, and adjectives qualifying that object copy its case, number and gender (feminine accusative singular). So the noun is मातरम् and each adjective ends in feminine-accusative-singular -आम्: रत्नाकरयुक्ताम्, पर्वतराजमुकुटाम्. The first distractor leaves everything in the nominative citation forms (माता, -युक्ता, -मुकुटा), the wrong case for an object. The second distractor puts the adjectives in the instrumental plural -ऐः (as if 'by means of' several things), which neither agrees with मातरम् nor expresses any means. The third distractor uses the genitive (-आयाः ... मातुः), expressing possession ('of the Mother') rather than the saluted object. Only वन्दे रत्नाकरयुक्ताम् पर्वतराजमुकुटाम् मातरम् keeps full accusative agreement.

20. (D) The chapter's own contrast is the key: kinship ऋ-stems like मातृ keep the SHORT strong stem (मातर-, giving मातरम्), while agent ऋ-stems like दातृ LENGTHEN it (दातार-, giving दातारम्). नप्तृ ('grandson') is an agent-type masculine ऋ-stem, so it lengthens: accusative नप्तारम्. दुहितृ ('daughter') is a kinship term like मातृ/पितृ, so it keeps the short stem दुहितर-: accusative दुहितरम्. So the correct pair is नप्तारम् and दुहितरम्. The first distractor reverses the assignment (short for the agent, long for the kinship term). The 'lengthen both' distractor ignores that kinship terms stay short. The bare-stem-plus-म् distractor (नप्तृम्/दुहितृम्) skips the obligatory stem-strengthening of ऋ-stems. Hence नप्तारम् (agent, long) and दुहितरम् (kinship, short) is right.

21. (D) Each word selects its own complement-case. नमः (indeclinable) licenses a dative of the one honoured: नमः मात्रे = 'homage to the Mother'. वन्दे (finite transitive verb) takes a direct object in the accusative: वन्दे मातरम् = 'I salute the Mother'. The learner swapped them, giving नमः + accusative and वन्दे + dative, so both are wrong in a mirror-image way; the fix restores नमः + dative and वन्दे + accusative. The 'freely exchange' distractor denies that government is word-specific. The 'both genitive' distractor invents a uniform genitive for all salutation, contradicting both attested constructions. The 'only the first wrong' distractor leaves वन्दे मात्रे standing, but a dative object of वन्दे is exactly the second error. Only the option correcting both swaps is right.

22. (D) A lesson can legitimately raise a topic in context while deferring its systematic treatment. Ch. 1's content includes आनन्दमठः, whose sense 'Abbey of Bliss' depends on the

long आ of आनन्द (shortening to अनन्द would wreck it); so the lesson flags the length principle right where it bites and cross-refers to Ch. 13 (वर्णमात्रा) for the full account. That is sound pedagogy, not an error. The 'misprint / unique to Ch. 1' distractor wrongly denies the forward reference. The 'conjugations only' distractor mislabels Ch. 1's nature and assumes a single permitted topic. The 'Ch. 13 teaches compounds' distractor swaps Ch. 13's actual subject (vowel length / वर्णमात्रा) for compounds. Hence Ch. 1 raises length contextually and points to Ch. 13 for depth.

23. (C) The poem juxtaposes the farmers who water the land with their sweat (कृषकबान्धवाः, स्वेदबिन्दुभिः) with the crop-green Mother (सस्यश्यामला), inviting the inference that the greenery is the fruit of human toil, not merely a natural gift. The careless reader misses this link and assigns the greenery to nature alone — the ocean at the feet or the Himalaya's snow — overlooking the farmers. The first distractor inverts the intended and the careless, treating the farmers' sweat as something 'never mentioned', though it is central. The holy-places distractor misroutes the cause to तीर्थक्षेत्राणि, which the poem invokes for sacredness, not fertility. The 'causeless / decorative' distractor denies any source, contradicting the explicit farmer-imagery. Hence the correct pairing credits the toil and identifies the nature-only slip as the careless error.

24. (A) Sandhi operates both within words and across word boundaries (external sandhi). वन्दे happens to stay unchanged before मातरम् because मातरम् begins with a consonant (म), and the final ए of वन्दे simply abuts it. But if a vowel-initial word followed — say इह — the meeting of ए with इ could trigger external vowel-sandhi, altering the written seam. So the student's blanket claim is false; sandhi is not confined within words. The 'never across boundaries' distractor denies external sandhi outright. The 'accusatives are sandhi-proof' distractor invents a case-based immunity that does not exist; sandhi depends on adjacent sounds, not on case. The 'only indeclinables' distractor falsely restricts external sandhi to one word-class. Hence sandhi is sound-driven and boundary-crossing, merely vacuous here because a consonant follows.

25. (B) तत्पुरुष and बहुव्रीहि differ precisely in what the whole denotes. As a तत्पुरुष, सस्यश्यामला denotes the QUALITY 'dark-green through crops' — predicating that the Mother is rendered green by her crops; the relation is instrumental/causal between the members. As a बहुव्रीहि, the same letters would denote an OUTSIDE possessor 'one whose crops are dark', foregrounding ownership rather than the crop-caused colour of the land itself. The chapter's portrait — the Mother's body green and fertile because of her crops — is the तत्पुरुष reading. The 'no difference' distractor erases the very tatpurusha/bahuvrīhi contrast the chapter teaches. The 'must be बहुव्रीहि / तत्पुरुष cannot describe the Mother' distractor is false: a तत्पुरुष quality-compound can perfectly well qualify the Mother as an adjective (सस्यश्यामलाम् मातरम्). The 'gender only' distractor reduces a denotational difference to a spurious gender split. So the तत्पुरुष 'dark-green by crops' is intended.

26. (A) Completeness of a Sanskrit clause rests on a finite verb that asserts an action (and carries its own subject). वन्दे does this: it is first-person-singular 'I salute', so 'I' and the act are both present, making it a complete one-word sentence. A bare noun — whether the nominative माता or the accusative मातरम् — names a participant but predicates no action, so neither is complete on its own. The student's idea that the nominative subject alone suffices ignores that a subject without a verb states no event. The 'noun + adjective' distractor invents a wrong completeness criterion. The 'accusative implies the verb silently' distractor wrongly imputes a hidden verb to a noun; an accusative names a would-be object but supplies no verb. Hence the finite verb is the deciding factor, and only वन्दे qualifies.

27. (D) The same string can be तत्पुरुष or बहुव्रीहि depending on the intended referent. For 'prince = the king's son', the compound denotes its head पुत्रः (the son), qualified by राज- ('of a king', a hidden genitive) — that is a genitive तत्पुरुष, parallel to पर्वतराजः. A बहुव्रीहि reading ('one whose son is a king') would denote an outside person (e.g. a parent), which is not 'prince'. So context — the ordinary meaning 'prince' — selects the तत्पुरुष. The 'must be बहुव्रीहि' distractor wrongly claims every two-noun compound points outside; तत्पुरुष compounds point to their own head. The द्वन्द्व distractor coordinates 'king and son' as two people, but a prince is one person, the son. The 'no members' distractor denies that राजपुत्रः is a compound at all. Hence तत्पुरुष is right for 'prince', fixed by the head-naming sense.

28. (B) The MEANS role is encoded by the instrumental case regardless of number, so switching from many drops (स्वेदबिन्दुभिः, instrumental plural) to one stream (स्वेदधारया, instrumental singular of the feminine आ-stem धारा) keeps the instrumental and the 'by means of' sense; what changes is the number (plural → singular) and, incidentally, the gender of the noun chosen (धारा is feminine). The accusative distractor wrongly converts the means into the object; the thing watered is still the land. The 'nothing changes' distractor ignores the obvious number/gender shift. The 'genitive in singular' distractor invents a rule that singular means take 'of'; means is instrumental in any number. Hence case/role constant, number and gender altered.

29. (A) Accusative-singular formation is governed by the noun's stem-class, so no uniform 'add -म्' works. For the ऋ-stem मातृ, the strong stem मातर- takes -म्: मातरम् (the chapter's form), not मातम्. For the आ-stem सीता, the accusative is सीताम् (the stem-vowel आ before -म्), not सीतम्. For the neuter अ-stem फल, the nominative and accusative singular are identical, फलम्; adding a second -म् (फलम्) is impossible. So the theory's core flaw is ignoring stem-class. The 'fully correct' distractor endorses non-existent forms. The 'fails only for मातृ' distractor still accepts the wrong सीतम् and फलम्. The '-आम् everywhere' distractor over-generalises the feminine adjective ending to all stems, producing the non-form मातआम्. Only the stem-class account is right.

30. (D) जिज्ञासा means 'curiosity / desire to know', and in the lesson it is the children's motive that prompts the mother's explanation — a plot/structural function. It has no

grammatical bearing on वन्दे मातरम्: the accusative मातरम् is governed by the transitive verb वन्दे, full stop, regardless of anyone's curiosity. So the student's claim that जिज्ञासा is the emotional/narrative driver and not a grammatical force is correct. The first distractor wrongly makes जिज्ञासा the cause of the accusative government, confusing plot with syntax. The second turns जिज्ञासा into a verb governing an object, which it is not (it is a noun, 'curiosity'). The third invents a case-ending meaning, which is nonsensical. Hence the precise relation is narrative motive, not grammar.

31. (D) The ending -इ on मातरि (with the strong stem मातर-) is the LOCATIVE singular, meaning 'in/at/on the Mother' — it marks location, a circumstance, not the direct object. वन्दे, a transitive verb, demands its object in the accusative, मातरम्. A locative cannot be promoted to fill the object role, so वन्दे मातरि is ungrammatical for 'I salute the Mother'. The accusative distractor falsely equates मातरि with मातरम्; they are different cases. The instrumental distractor both mislabels the form (instrumental of मातृ is मात्रा, not मातरि) and wrongly allows instrumentals as objects. The nominative distractor mislabels it too (nominative is माता) and would make the Mother the agent. Hence मातरि is locative and unfit as the object.

32. (C) In देशभक्तः the first member देश names the OBJECT of devotion ('devoted to the country') and the head भक्तः names the devotee. By the same तत्पुरुष pattern, मातृभक्तः means 'one devoted to the Mother' — the Mother is what the devotion is directed at, and the whole denotes the devotee. The student's gloss ('a devotee whom the Mother loves') reverses the direction of the relation, making the Mother the lover rather than the object of devotion, which the structure does not support. The 'Mother's devotion = a feeling' distractor turns the person-denoting head into an abstract noun. The द्वन्द्व distractor coordinates 'devotee and mother' as two people, but the compound denotes one devotee directed at the Mother. Hence 'devoted to the Mother' is the correct reading.

33. (C) Sanskrit marks grammatical role by ENDING, not by position, so 'the word right after वन्दे is the object' is unreliable. A vocative could follow — वन्दे मातः would be addressing 'O Mother', not taking her as the accusative object — and other non-accusative or adverbial words could appear there too. Only a genuine accusative (मातरम्) is the object. Therefore one must inspect the ending. The 'word-order fixes case' distractor states the false premise the question targets. The 'every noun guaranteed accusative' distractor ignores that following nouns may be vocative, genitive, etc. The 'must be followed by a verb' distractor is also false — वन्दे is itself the verb and is normally followed by its noun object. Hence position is not a substitute for checking the case-ending.

34. (C) The vowel-length principle is general: changing a vowel's length can change a word's identity anywhere in the word, not only in its first member. So lengthening मठ ('abbey') to माठ cannot be assumed to preserve the meaning — it may produce a different word or no word, exactly as आनन्द → अनन्द destroys the sense. The student's 'same meaning, longer sound' rests on the very misconception under test. The 'only first member matters'

distractor arbitrarily exempts later syllables from a principle that applies throughout. The 'guaranteed synonyms' distractor denies that length is meaning-bearing. The 'no long variant / cannot be written' distractor is false — long आ in that slot is perfectly writable; the point is semantic, not orthographic possibility. Hence one must not assume meaning survives lengthening the second member.

35. (B) Although a learner might expect the parasmaipada वन्दामि for 'I salute', the root वन्द् is ātmanepada, taking the ending -ए, so its correct first-singular is वन्दे — and that is precisely the song's word: वन्दे मातरम्. So वन्दामि is the wrong pada for this root, even though it would carry the same lexical sense 'I salute'; and it is not the song's text. The 'वन्दामि is what the song uses' distractor is factually wrong about the text. The 'वन्दामि = we salute' distractor mis-numbers it — वन्दामि is first SINGULAR in parasmaipada, not plural. The 'different tense' distractor is also wrong — वन्दामि would be present, not past. Hence the judgement: same meaning, but वन्दे is the proper ātmanepada form and the actual text.

36. (A) The poem places the Himalaya as a CROWN on the Mother's head; calling it पर्वतराजः ('king of mountains') ennobles the mountain, and a crowning ornament glorifies the one it crowns — so the grandeur of the 'king of mountains' redounds to Bharat's glory, not to her subordination. The reader's 'king outranks what he crowns' logic misreads the figure: here the mountain is the adornment, the Mother the adorned. The 'servant of mountains' distractor mistranslates पर्वतराजः (राजः is 'king', not servant). The 'crown at the feet' distractor misplaces the crown, which sits at the head. The 'refers to the ocean' distractor swaps referents — रत्नाकरः is the ocean; पर्वतराजः is the Himalaya at the head. Hence the crown-image exalts Bharat.

37. (A) 'By/with the Mother' as means or agent is the INSTRUMENTAL, whose singular here is मात्रा. The tempting traps are the look-alike forms in the same paradigm: मातरम् (accusative) names the object acted upon, not the means; मातुः (genitive) means 'of the Mother', possession, not means. The locative मातरि marks place ('in/at the Mother'), not means, so it is wrong. The 'genitive expresses by' distractor confuses possession with means. The 'accusative = means' distractor conflates object and instrument, two distinct roles. So among the five forms, only मात्रा is the instrumental, the correct choice for 'by the Mother'.

38. (C) क्षेत्र ('field/place') is a neuter अ-stem, and its nominative/accusative plural ends in -आणि: क्षेत्राणि. So तीर्थक्षेत्राणि is neuter plural, 'holy places'. This is a different ending from the masculine nominative plural -आः on बान्धवाः (कृष्कबान्धवाः); the surface similarity ('both end in a long vowel plus something') is superficial, and the genders/declensions differ. The 'feminine plural' distractor mislabels both gender and the model. The 'neuter singular' distractor is wrong: neuter singular of क्षेत्र is क्षेत्रम्, and -आणि is plural. The 'genitive plural' distractor is wrong: genitive plural would be क्षेत्राणाम्. Hence -आणि marks neuter (nom./acc.) plural here.

39. (D) The chapter rejects 'I salute my mother at home' on two independent grounds: (1) the verb — वन्दे means salute/revere, a verb of honour, not affection ('love'); and (2) the referent — 'Mother' here is the personified Motherland भारतमाता, not one's domestic mother. The second student changes 'salute' to 'love'. This does NOT fix ground (1) — it replaces a correct verb-sense with the wrong one ('love' is precisely the verb the chapter warns against). And it does nothing for ground (2) — the referent is still the domestic mother. So neither ground is repaired; in fact the verb is now worse. The 'repairs the verb' distractor mistakes introducing 'love' for a correction, when 'love' is itself the error. The 'repairs both' and 'fixes the referent' distractors both endorse the home-mother reading the chapter rejects. Hence zero grounds are correctly repaired.

40. (D) Verb–subject agreement governs number: the finite verb matches the number of its subject, not its object. Here the subject is समुद्रः ('the ocean'), singular, so the verb is third-person singular प्रक्षालयति. The object चरणौ is dual, but objects do not control verb-number, so a dual verb is not triggered. The 'agrees with object' distractor states the misconception directly. The 'plural प्रक्षालयन्ति' distractor both mis-numbers (the subject is singular) and treats dual 'feet' as plural. The 'first-person प्रक्षालयामि' distractor ignores that the subject is the ocean, third person, and that 'on behalf of the speaker' is not a Sanskrit agreement rule. Hence the singular verb correctly agrees with the singular subject समुद्रः.

41. (C) By the same sandhi as रत्नाकरः, the long आ in देवालयः is the fusion of देव's final अ with आलय's initial आ (अ + आ → आ). Undoing it gives देव ('god') + आलय ('abode/seat'), a genitive तत्पुरुष 'abode of god(s)' = temple. The student's देवा + लयः wrongly cuts the word, assigning the long आ to a fictitious देवा and leaving लयः ('dissolution'), inventing the meaning 'dissolution of gods'. That ignores the regular अ + आ → आ join. The 'dissolution of gods is correct' distractor endorses the bad split. The 'god who is an abode, बहुव्रीहि' distractor mis-types the compound — it denotes an abode (its head आलय), a तत्पुरुष, not an outside possessor. The 'आ never from fusion' distractor denies the very sandhi rule रत्नाकरः illustrates. Hence देव + आलय ('temple') is correct.

42. (B) Sanskrit word order is relatively free, so मातरम् वन्दे is fine — मातरम् remains the accusative object regardless of whether it precedes or follows वन्दे. But freedom of ORDER is not freedom of CASE: the object must still be accusative. माता is nominative (the subject/citation form), so माता वन्दे fails — reordering cannot turn a nominative into a valid object. The 'both fine / free case' distractor conflates word-order freedom with case freedom. The 'both wrong / वन्दे must be first' distractor invents a fixed-position rule that does not exist. The 'मातरम् वन्दे wrong / माता वन्दे right' distractor inverts the truth, accepting the nominative and rejecting the legitimate reordered accusative. Hence order is free, case is not.

43. (D) तत्पुरुष is a family of compounds distinguished by the hidden case-relation between the qualifier and the head. In सस्यश्यामला the relation is instrumental: 'dark-green BY/WITH crops' (crops are the means of the colour). In देशभक्तः the relation is

objective/locative-dative-like: 'devoted TO the country' (the country is what the devotion is directed at), not 'devoted BY the country'. So although both are तत्पुरुष, their internal case-relations differ — instrument vs goal/object. The 'both instrument' distractor flattens this distinction; 'devoted by the country' is not the sense. The 'देशभक्तः is बहुव्रीहि' distractor mis-types it — it denotes its own head भक्तः, hence तत्पुरुष. The 'gender only' distractor again reduces a relational difference to gender. Hence the two तत्पुरुष differ in their hidden case-relation.

44. (B) Check each axis. (a) The composer is Bankim Chandra Chattopadhyay — not Tagore, not the children. (b) The song first appears in his novel आनन्दमठः, dated 1882 — not a play, not a Vedic hymn, and not 1947. (c) An उपन्यासः is a novel — not a song, mountain, or poem. (d) Its appearing inside a novel matters because the patriotic feeling is embedded in a narrative context, giving the hymn a story-setting rather than being an isolated verse — not because plays are anonymous, not because hymns predate novels, and certainly not because it 'proves the song has no author' (it has a known author). Only the first option is right on all four; each distractor breaks at least one axis (wrong author/work/date/definition or a false rationale).

45. (B) Surface endings must be interpreted within a stem's declension, not transferred blindly. For neuter अ-stems like फल, the nominative and accusative singular are both फलम् — the -म् there can be nominative. For the feminine ऋ-stem मातृ, the nominative singular is माता (no -म्), and the -म् of मातरम् is the ACCUSATIVE-singular marker. So the same letter -म् signals different cases in different declensions; one cannot infer मातरम् is nominative from फलम्. The '-म् always same case' distractor states the fallacy. The 'फलम् is feminine' distractor is factually wrong (फल is neuter) and misdiagnoses the issue. The 'मातरम् is genitive' distractor mislabels it — मातरम् is accusative; the genitive is मातुः. Hence the flaw is treating -म् as case-uniform across stems.

46. (B) The hymn weaves natural grandeur (Himalaya-crown, ocean-feet) and human toil (farmers watering with sweat, yielding the crop-green body) into a single portrait of a revered, abundant Motherland; it celebrates the farmers' labour as the source of the greenery, honouring them alongside the natural images rather than ranking them below. So no hierarchy subordinating farmers is implied. The 'farmers greater than Himalaya' distractor invents an explicit ranking the poem does not make. The 'never mentions farmers' distractor is false — कृषकबान्धवाः are explicitly praised. The 'ocean and Himalaya are servants' distractor invents a reversed hierarchy equally unsupported. Hence the chapter's logic is integration, not ranking.

47. (D) The ending -म् marks the accusative singular in both, but the STEM it attaches to differs by declension. The masculine अ-stem हिमालय takes -म् directly with no change: हिमालयम्. The feminine ऋ-stem मातृ must first strengthen to मातर- in the strong cases, so the accusative is मातरम्, not stem-plus-म् (मातृम्). Thus मातृम् skips the obligatory stem-strengthening. The 'मातृ is masculine' distractor mis-genders it (मातृ is feminine) and

assumes uniform suffixing. The 'feminine never takes -म् / use -आम्' distractor wrongly bars -म् and pulls in मात्राम्, which is a different word (मात्रा 'measure'). The 'हिमालय accusative is हिमालयः' distractor mislabels the accusative (हिमालयः is nominative). Hence the same -म् needs a strengthened stem for मातृ but a bare stem for हिमालय.

48. (A) Gender and personification do not determine case; the syntactic ROLE does. Within the very lesson, भारतमातुः is genitive (possession, 'the Mother's feet'), माता is nominative (citation/subject), and मातरम् is accusative only because it functions as वन्दे's object. So a feminine word naming the Mother can be genitive, nominative, accusative, instrumental, etc., depending on its role. The 'all accusative' distractor states the misconception. The 'some are masculine' distractor misdiagnoses by gender-switching rather than by role. The 'all nominative' distractor over-corrects in the opposite direction, ignoring that मातरम् really is accusative as the object. Hence role, not personification, fixes case.

49. (A) Take each axis. (a) चरणौ ends in dual -औ and names the two feet that are washed — accusative dual object. (b) स्वेदबिन्दुभिः ends in -भिः, the instrumental plural, marking the means 'with sweat-drops'. (c) भारतमातुः ends in genitive -उः, expressing possession, 'the Mother's (feet)'. (d) कृषकबान्धवाः is a तत्पुरुष whose head is the LAST member बान्धव ('brethren'); कृषक merely qualifies it. The first distractor errs on every axis (nominative/genitive/accusative and head कृषक). The second is right on (a) and (b) but wrong on (c) (भारतमातुः is genitive, not nominative) and (d) (head is बान्धव, not कृषक). The third scrambles (a)–(c) into genitive/accusative/instrumental though only the head is right. Only the option with accusative-dual / instrumental-means / genitive-possession / head-बान्धव is correct on all four.

50. (A) A compound is defined by combining two or more independent meaning-bearing members (e.g. देश + भक्तः in देशभक्तः), not by sheer length. मातरम् and माता are simply inflected forms of the single stem मातृ (accusative vs nominative); मातरम् is longer only because of its case-ending and stem-strengthening, not because it contains a second word. There is no member 'अरम्' meaning anything. So the length heuristic is worthless. The 'मातरम् = मात + अरम्' distractor invents a false split. The 'माता is the real compound' distractor is equally baseless — माता is a single inflected form. The 'three-syllable threshold' distractor proposes an arbitrary, non-existent rule. Hence multiple members, not length, defines a compound.

51. (C) The descriptors सुजलाम् ('well-watered') and सुफलाम् ('well-fruited') are adjectives of मातरम्, agreeing with it in feminine accusative singular; the line salutes ONE Mother characterised by these qualities. Treating each as a separate object of an unstated वन्दे would absurdly multiply the things saluted (three entities), against both the sense (one Motherland) and the principle that adjectives agree with and depend on their head noun. The 'independent objects / three things' distractor states the misreading. The 'adjectives never agree' distractor denies the basic agreement rule the chapter teaches. The 'must be

genitive' distractor misreads the -आम् (feminine accusative) as a genitive 'of'. Hence they are dependent, agreeing adjectives, not independent objects.

52. (A) Same referent does not mean same case. नमः is construed with a dative of the honoured one, so 'homage to the Mother' is नमो भारतमात्रे (dative). वन्दे is a transitive verb taking an accusative object, so 'I salute the Mother' is वन्दे भारतमातरम् (accusative). The endings -त्रे (dative) and -तरम् (accusative) mark distinct cases demanded by distinct governing words; they are not spelling variants and cannot be swapped. The 'free variants' distractor states the error. The 'differ only in number' distractor is false — both are singular; they differ in case. The 'both govern the dative' distractor is wrong because वन्दे governs the accusative, not the dative. Hence the construction fixes the case, making the endings non-interchangeable.

53. (A) Epithets do referential AND expressive work. रत्नाकरः and पर्वतराजः not only pick out the sea and the mountain but praise them ('mine of jewels', 'king of mountains'), ennobling nature and thereby glorifying the Motherland — the hymn's affective core. Replacing them with the bare समुद्रः and हिमालयः keeps the reference but strips the laudatory, personifying force, flattening the poetry. The 'nothing lost' distractor denies that manner of naming matters in poetry. The 'grammar breaks' distractor is false — समुद्रः and हिमालयः inflect and function normally. The 'meaning reverses' distractor mistranslates the plain words (समुद्रः is ocean, हिमालयः is the Himalaya). Hence what is lost is the praise/personification, not the reference or grammar.

54. (D) Check all three principles in the correct option. Compound-splitting: रत्नाकरः = रत्नानाम् आकरः, a genitive तत्पुरुष meaning 'mine of jewels' (the ocean), denoting its own head आकरः. Vowel-length/sandhi: the seam long आ is the fusion of रत्न's अ with आकर's आ (अ + आ → आ), and length is meaning-bearing, not cosmetic. Case-government: वन्दे takes its object in the accusative मातरम्, never the genitive. The first distractor wrongly bars splitting, dismisses the seam, and mis-governs वन्दे to genitive. The second mis-types रत्नाकरः as बहुव्रीहि, denies length, and gives वन्दे a nominative object. The third invents the split रत्न + नाकरः ('jewel-less'), denies length, and gives वन्दे a dative object. Only the first option is sound on all three principles.

55. (C) Sanskrit verbs encode their subject in the personal ending, so the pronoun is usually omitted; but stating it explicitly for emphasis is allowed, not forbidden. Thus अहम् वन्दे मातरम् is grammatical, with अहम् ('I', nominative) emphasising the subject already implied by वन्दे. The student's 'strictly forbidden double-marking' claim is too strong — emphatic re-statement of the subject pronoun is normal. The 'अहम् is accusative / second object' distractor mislabels अहम्, which is nominative, not an object. The 'अहम् means the Mother' distractor is simply wrong — अहम् means 'I', not 'Mother'. Hence the student is mistaken: the explicit pronoun is permissible for emphasis.

56. (B) The chapter's method is a sustained personification: features of the land are mapped onto a single Mother's body — the Himalaya crowns the head, the ocean washes

the feet, crops make the body green. Extending that same body-mapping to imagine rivers as veins or flowing hair is faithful to the METHOD, even though the lesson does not state that particular image; it is a coherent extrapolation of the technique. The 'forbids extending' distractor misreads a poetic method as a closed list. The 'lifeless geography' distractor contradicts the chapter's explicit personification. The 'only the head / sole body-part' distractor is false — the poem uses head, feet and body, so multiple body-parts are in play. Hence the extension is method-faithful, while flagged as the student's own image.

57. (A) The learner's form वन्दसे is actually the correct ātmanepada second-singular ('you salute'), patterning with वन्दे (1 sg. -ए) and वन्दते (3 sg. -ते). The ending -से here is ātmanepada, not parasmaipada; the parasmaipada second-singular would be -सि. So the form CONFIRMS that वन्द् is ātmanepada, and the learner's inference that it is parasmaipada is exactly backwards. The 'inference is right' distractor mislabels -से as parasmaipada. The 'form is wrong / should be वन्दसि' distractor wrongly imposes the parasmaipada ending on an ātmanepada root. The '-से is third person' distractor mis-numbers it — -से is second singular, not third. Hence the form is fine and the inference is the error: it actually shows ātmanepada.

58. (A) वन्दे takes the accusative object, and qualifying adjectives copy its feminine accusative singular: the noun is भारतमातरम् and each adjective ends in feminine-accusative-singular -आम्: तीर्थक्षेत्रयुक्ताम्, कृषकवत्सलाम्. The first distractor leaves everything in nominative citation form (भारतमाता, -युक्ता, -वत्सला), the wrong case for an object. The second uses the genitive (-आया: ... भारतमातुः), expressing possession 'of the Motherland', not the saluted object. The third puts the adjectives in instrumental plural -ऐः (a non-existent 'means') while leaving the noun accusative, breaking agreement. Only वन्दे तीर्थक्षेत्रयुक्ताम् कृषकवत्सलाम् भारतमातरम् keeps full feminine-accusative-singular agreement throughout.

59. (C) The crown-at-head / sea-at-feet image works along the body's vertical (head-to-foot) axis, which the poem aligns with the geographic north-south axis: head/crown = north (top), feet = south (bottom). This mapping does not depend on which way the figure 'faces' (a front-back matter); the head is the top of a standing body in any facing. So the Himalaya in the north is the crown at the head and the southern seas wash the feet, unambiguously. The 'poem states she faces the reader' distractor invents a stipulation and concedes the irrelevant facing premise. The 'north and south interchangeable' distractor wrongly accepts ambiguity. The 'Himalaya in the south' distractor is geographically false — the Himalaya lies to the north. Hence the head-to-foot vertical axis removes the supposed front-back ambiguity.

60. (B) Verify each axis in the correct option. Verb force: वन्दे is active first-singular 'I salute' — not passive, not 'I love', not third-plural. Object case: मातरम् is the accusative object — not nominative माता, genitive मातुः, or dative मात्रे. Compound: सस्यश्यामला is a तत्पुरुष meaning 'dark-green with crops' — not a बहुव्रीहि 'snow-white', not a द्वन्द्व, not uncompounded; श्यामला means dark/green, not white. Instrumental role: स्वेदबिन्दुभिः is the

instrumental of means ('with sweat-drops') — not genitive, nominative, or accusative.
Author: Bankim Chandra Chattopadhyay — not Tagore, the children, or unknown. Only
the first option is correct on every axis; each distractor fails several (passive/बहुव्रीहि-
white/genitive/Tagore; 'I love'/इन्द्र/nominative/children; third-
plural/uncompounded/accusative/unknown).
